

1. Mimivirus is a genus of giant viruses, in the family Mimiviridae. Amoebas serve as their natural hosts. This genus contains a single identified species named *Acanthamoeba polyphaga mimivirus*.
2. -Receptors: mediate conformational changes in the viral attachment proteins, function in entry, or activate signalling pathways that are necessary for the infectious life cycle of the virus.

-Capsid: protects the viral genome when the virion is outside the host cell and to initiate the infectious process when a receptor on a suitable host cell is encountered.

-Envelope : the envelope glycoproteins on the viral envelope bind to the receptors as well as the transfer of the viral genetic material from one cell to another.
3. -Adsorption: Virus recognises and attaches to specific host cell. Spikes on envelope and proteins on capsule attach or match to the receptors of the host cell.

-Penetration: virus taken into cell by endocytosis or viral envelope fuses with host cell membrane and dumps content into host cell.

-Replication: Viral genes are copied, and viral parts are mass produced.

-Assembly: Individual viral parts are assembled into a whole virus.

-Release: New active viruses are released from host cell. Lysosome lyses the cell and releases the progeny.
4. David Baltimore classification system is used for classifying viruses based on the type of genome and its replication strategy. Viruses do not contain protein translation machinery, so they are dependent on the host cells machinery for protein translation. Viruses are also classified on their strategy for using the host cells protein translation machinery. There are 7 classes used in the Baltimore Classification system. Class I: Double-stranded DNA (dsDNA) viruses. Class II: Single-stranded DNA (ssDNA) viruses. Class III: Double-stranded RNA (dsRNA) viruses. Class IV: Single-stranded RNA (ssRNA) viruses. Group V: negative sense single-stranded RNA viruses. Group VI: single-stranded RNA viruses with a DNA intermediate in their life cycle. Group VII: double-stranded DNA viruses with an RNA intermediate in their life cycle.
