Introduction to Software for Chemical Engineers Mariano Martín Martín,2014-07-01 The field of chemical engineering is in constant evolution and access to information technology is changing the way chemical engineering problems are addressed Inspired by the need for a user friendly chemical engineering text that demonstrates the real world applicability of different computer programs **Introduction to Software for Chemical Engi** **Integrated Chemical Processes in Liquid Multiphase Systems** Matthias Kraume,Sabine Enders,Anja Drews,Reinhard Schomäcker,Sebastian Engell,Kai Sundmacher,2022-06-21 Liquid multiphase processes represent a promising option for realizing novel efficient and sustainable production processes as required for the transformation towards climate neutral manufacturing processes This volume presents the results obtained over twelve years in the DFG funded collaborative project Transregio 63 **Integrated Chemical Processes in Liquid Multiphase Systems** In an interdisciplinary approach to the design and operation of such processes essential principles of Green Chemistry are realized such as using long chain olefins as model representatives of renewable raw materials highly efficient catalysts and green solvents linked with process optimization to improve energy and material efficiency Experts from different fields addressed all steps of the development process from the description of the reactions on the molecular level via thermodynamics and the design of efficient separation processes to the operation of entire miniplants for liquid multiphase production processes Thus the complete development chain from the first reaction related investigations in the laboratory to the technological realization in miniplants with model based control is demonstrated Numerous methodological innovations are proposed and validated using several innovative phase systems thermomorphic multiphase systems microemulsion systems Pickering emulsions and homogeneously catalyzed reactions Engineers and chemists from the chemical industry as well as advanced students and researchers will get valuable insights into the physico chemical phenomena in chemical multiphase processes and benefit from recommendations concerning methods for the selection of phase systems and rapid model based process development *Integrative Learning of Theory and Practice* Mariana Orozco,2022-02-14 This book addresses the questions of what constitutes the integrative learning of theory and practice ILTP and how this learning progresses over time these are important questions that have been overlooked to date It introduces a new way of looking at the theory practice integration and presents the conceptual and

empirical research that has led to such a view The conceptualisation of the ILTP and the description of the phenomenon of integration draw on psychological aspects of epistemological beliefs in TVET and on philosophical aspects of social reasoning In this inferentialist non dualistic epistemological perspective theory and practice are distinguished in terms of their use in reasoning rather than as intrinsically different forms of knowledge In particular the integrative learning is presented in terms of qualitative changes in chains of reasoning that connect theoretical and practical considerations This work represents a contribution to further educational research as it advances a novel operationalisation of the inferentialist framework Finally this work contributes to educational practice as it offers evidence based guidelines for practitioners concerned with instructional design in T VET The reported empirical investigations involved in depth qualitative research methods and were conducted at a micro level of instruction in alternating school based and work based programmes in the field of Chemicals Processing Technology CPT
