## Exam on Monday Dec 16 at 8:30

### Section I = 75 pts

- Consists of 75 multiple choice questions worth 1 pt. each
- Questions cover all material covered during the second semester
- Questions will be similar to multiple choice problems in the book and review guides on-line
- Practicing the review guides is the best approach; answers will be posted on-line

### Section II = 95 pts

- Consists of 19 short answer problems totaling 95 points
- Questions cover the whole semester
- Examples of types of questions
  - Metric Conversions
  - Volume Calculations
  - Percent Composition
  - Atomic Mass
  - Electron configuration
  - Nomenclature
  - Balancing Equations
  - Predicting the products of a reactions
  - Identifying types of reactions
  - Mole Conversions
  - Molar Mass of a compound
  - Molar Mass of a gas at STP
  - Density of a gas at STP
  - Empirical & Molecular Formula

### Study approach

- First, read through your notes. Once thoroughly and once more quickly.
- Go through the review packet and make sure you are comfortable with all of the terms and how to do problems
- Do the review packets for help with multiple choice
- Do questions on old tests for practicing written problems
- Make sure you have practiced AT LEAST one of the types of example problems

### Chapter 1 – Introduction to Chemistry

- Chemistry: the branch of science that studies the composition and properties of matter.
- Scientific Method:
  - Observation
  - Hypothesis
  - Controlled Experiment
- Theory versus Natural Law

### Prerequisite Science Skills

- Rules for Significant Figures:
  - 1) All non-zero digits are significant.
  - 2) Zeros are significant only when they are *between* two non-zero digits or if they occur *after* a decimal point and *after* a non-zero digit.
  - 3) In *multiplication or division*, you cannot end up with more significant figures than you started with.
  - 4) In *addition or subtraction*, you cannot have more digits to the *right* of the decimal than you started with.
- Exponential numbers
- Scientific Notation =  $D.DD \times 10^n$  where  $1.00 \leq D.DD \leq 9.99$

**Learning While Black** Janice E. Hale, 2001-12-04 In *Learning While Black* Janice Hale argues that educators must look beyond the clichés of urban poverty and teacher training to explain the failures of public education with regard to black students Why Hale asks simply are black students not being educated as well as white students Hale goes beyond finger pointing to search for solutions Closing the achievement gap of African American children she writes does not involve better teacher training or more parental involvement The solution lies in the classroom in the nature of the interaction between the teacher and the child And the key she argues is the instructional vision and leadership provided by principals To meet the needs of diverse learners the school must become the heart and soul of a broad effort the coordinator of tutoring and support services provided by churches service clubs fraternal

organizations parents and concerned citizens Calling for the creation of the beloved community envisioned by Dr Martin Luther King Jr Hale outlines strategies for redefining the school as the Family and the broader community as the Village in which each child is too precious to be left behind In this book I am calling for the school to improve traditional instructional practices and create culturally salient instruction that connects African American children to academic achievement The instruction should be so delightful that the children love coming to school and find learning to be fun and exciting Janice Hale

Petersen,2023-07-03 While Active Learning Classrooms or ALCs offer rich new environments for learning they present many new challenges to faculty because among other things they eliminate the room s central focal point and disrupt the conventional seating plan to which faculty and students have become accustomed The importance of learning how to use these classrooms well and to capitalize on their special features is paramount The potential they represent can be realized only when they facilitate improved learning outcomes and engage students in the learning process in a manner different from traditional classrooms and lecture halls This book provides an introduction to ALCs briefly covering their history and then synthesizing the research on these spaces to provide faculty with empirically based practical guidance on how to use these unfamiliar spaces effectively Among the questions this book addresses are How can instructors mitigate the apparent lack of a central focal point in the space What types of learning activities work well in the ALCs and take advantage of the affordances of the room How can teachers address familiar classroom management challenges in these unfamiliar spaces If assessment and rapid feedback are critical in active learning how do they work in a room filled with circular tables and no central focus point How do instructors balance group learning with the needs of the larger class How can students be held accountable when many will necessarily have their backs facing the instructor How can instructors evaluate the effectiveness of their teaching in these spaces This book is intended for faculty preparing to teach in or already working in this new classroom environment for administrators planning to create ALCs or experimenting with provisionally designed rooms and for faculty developers helping teachers transition to using these new spaces      **Muskingum College Bulletin** Muskingum
