entitled ENVIRONMENTAL ANALYSIS Techniques applications and quality assurance The book treats different aspects of
environmental analysis such as sample handling and analytical techniques the applications to trace analysis of pollutants
mainly organic compounds and quality assurance aspects including the use of certified reference materials for the quality
control of the whole analytical process New analytical techniques are presented that have been developed significantly over
the last 6 years like solid phase microextraction microwave assisted extraction liquid chromatography mass spectrometric
methods immunoassays and biosensors The book is divided into four sections The first describes field sampling techniques
and sample preparation in environmental matrices water soil sediment and biota The second section covers the application
areas which are either based on techniques like the use of gas chromatography atomic emission detection immunoassays or
coupled column liquid chromatography or on specific application areas like chlorinated compounds pesticides phenols
mycotoxins phytotoxins radionuclides industrial effluents and wastes including mine waste Validation and quality assurance
are described in the third section together with the interpretation of environmental data using advanced chemometric
techniques The final section reports the use of somewhat advanced analytical methods usually more expensive less routinely
