1. A **characteristic** of matter that can be seen or measured **WITHOUT CHEMICALLY CHANGING** that matter is a \_\_\_\_\_ property.
2. A **characteristic** of matter that can only be observed when one substance changes into or produces something new is a \_\_\_\_\_ property.
3. A change in which the identity of the substance **does NOT** change is known as a \_\_\_\_\_ change.
4. A change in which one type of matter transforms into **another type or kind that may have very different properties** from the original is known as a \_\_\_\_\_ change.
5. The state of matter in which the molecular configuration is the most spread out because the atoms have the most energy and are moving fast is the \_\_\_\_\_ state.
6. The state of matter that is created when heat (more energy) is added to a solid is the \_\_\_\_\_ state.
7. The state of matter with the least energy in which the atoms are tightly packed together and vibrate slowly in place is the \_\_\_\_\_ state.
8. A pure substance in its simplest form (a single atom) that cannot be broken down into any other substance by chemical or physical means is a(n) \_\_\_\_\_.
9. A pure substance made of two or more elements chemically combined in a set ratio is a \_\_\_\_\_.

**Organic Chemistry Study Guide** Robert J. Ouellette, J. David Rawn, 2014-10-13 Organic Chemistry Study Guide Key Concepts Problems and Solutions features hundreds of problems from the companion book Organic Chemistry and includes solutions for every problem Key concept summaries reinforce critical material from the primary book and enhance mastery of this complex subject Organic chemistry is a constantly evolving field that has great relevance for all scientists not just chemists For chemical engineers understanding the properties of organic molecules and how reactions occur is critically important to understanding the processes in an industrial plant For biologists and health professionals it is

essential because nearly all of biochemistry springs from organic chemistry. Additionally, all scientists can benefit from improved critical thinking and problem-solving skills that are developed from the study of organic chemistry. Organic chemistry, like any skill, is best learned by doing. It is difficult to learn by rote memorization, and true understanding comes only from concentrated reading and working as many problems as possible. In fact, problem sets are the best way to ensure that concepts are not only well understood but can also be applied to real-world problems in the workplace.

What are you waiting for?

Testimonial: I just wanted to drop you guys a line and tell you that I passed my final CLEP exam last Monday, which gives me all of the credits I need to graduate. I have taken 30 credits worth of CLEP exams, and I've passed them all by using your study guides. I actually purchased one of your study guides and failed my first test. I didn't fail because of your guide, though; I failed because I didn't manage my time effectively, and I ran short. I looked at your study guide after failing, though, and a lot of the information on your study guide was very relevant to what was on the test. So I tried again with a different test and a different study guide of yours, and I passed. This pattern continues for 30 credits. I graduate on June 9th, thanks to you guys, so I wanted to say thank you. The guides were worth every penny. Thanks, John S. I would like to thank you for your study guides. I will be graduating in December with two bachelor's degrees, and CLEP helped me get there quickly. I gained 36 credits through CLEP, and your study guides helped me through almost all of them. I can honestly say that I would not have passed many of the tests without your guides. Great products. Thanks, Erin W.
