

Exploring Current Issues in Educational Technology Using a Problem-Based Approach to Instruction

Drew Tiene

This article examines twenty of the today's most important issues for professionals in the field of educational technology. It then describes how these issues have been effectively taught in a college course, using problem-based learning (PBL) approaches with a new text, based upon PBL principles. Finally, the article concludes with some speculations as to what kinds of issues might become critical in the next few decades.

What are the critical issues in the field of educational technology, and how can they best be addressed? Is there a more important matter today for educational technologists? Probably not. Yet how often are larger concerns left unaddressed as we specialists focus upon which machine, which software application, how much functionality, what type of network connection, how much bandwidth, and similar matters? An important component of any educational technologist's training should be thoughtful and thorough examination of the various issues that can arise when information and communications technologies are introduced into an educational process. Furthermore, showing students how to address problematic, complex issues when they arise in the course of one's professional experiences is extremely important, so that theory effectively informs practice.

While many academic educational technology programs across the country include issues-related coursework in their curricula, there appears to be no real consensus about what crucial issues ought to be addressed. Only a few texts, like Anglin's *Instructional Technology: Past, Present, and Future* (1995), address

this important area. A search for articles about critical issues in educational technology produced only a few recent citations (e.g., Burbules & Callister, 2000; Hallinger, Slowinski, & Rodriguez, 1999), and these writings are very practitioner oriented, not really designed to prompt theoretical discussions.

This article will address the question of what topics might most appropriately be considered in such issues-based courses and how these areas might most effectively be pursued by using a problem-based approach to instruction. These suggestions are based upon a successful experience in team teaching a current issues course with my colleague at Kent State University, Albert Ingram, during which we developed a book entitled *Exploring Current Issues in Educational Technology* (Tiene & Ingram, 2001).

This is not a text that tries to simply provide readers with information they are expected to memorize. Instead, it tries to get them to think, using an approach that has generally been termed problem-based learning (PBL). This pedagogical technique presents problematic issues and asks students how best to deal with them. PBL has become an increasingly popular technique, as evidenced in current educational research literature (Cockrell, Caplow, & Donaldson, 2000; Edens, 2000; Lohman & Finkelstein, 2000; Murray & Savin-Baden, 2000). One good example of a book in the educational technology field designed effectively for PBL is *The ID Casebook*, by Ertmer and Quinn (1998), a book of case studies available for teaching instructional design techniques and applications.

This article will describe the twenty critical issues that we decided to address in our book. They are grouped into five separate sections, each of which addresses a different type of concern: maximizing learning, establishing appropriate policies, social ramifications, questions regarding the technology itself, and future possibilities. For each of the five general themes, four representative issues are included. While philosophical questions do enliven this text, most of these twenty issues involve practical dilemmas that educational technologists may encounter in their professional work. Understanding the philosophical underpinnings of an issue should only be the first stage in addressing it. Then a strategy for dealing with the situation needs to be developed if there is to be any meaningful resolution to the problem. Issues-related coursework should ideally address both the philosophical and the pragmatic, so professionals in the field will fully understand the challenges they face and then effectively be able to address them.

Learning Issues

The first set of issues deals with research and curriculum, exploring how one might most effectively learn about educational technology and examining which approaches to using educational technology
