Crime Prediction Using GIS and Statistical Modelling Priyanka Biswas, Nilanjana Das Chatterjee, 2025-02-17 The study presented in this SpringerBrief uses GIS tools to analyze incidents of violence against women in West Bengal India identifying hotspots and offering tools and strategies to predict and prevent future violence The aim of this study is to understand the existing scenarios and the complex crime patterns committed against women in West Bengal using advanced GIS tools to map and understand the underlying socio economic and physical environmental contexts of specific crime events and critically discussed emerging criminogenic issues on the basis of theoretical understanding and immediate situations This study evaluates the effectiveness of existing legislative measures to extract the gaps that exist between policy formulation and execution and effectively applied statistical methods and GIS technologies to visualize the future potential crime areas so that possible measures might be taken The study considers four categories of violence perpetrated on women human trafficking acid attacks rape and sexual harassment Each chapter follows a self contained design to address the study objectives as each crime follows distinct crime pattern differentially affects the targets and increase risk of victimization and differential key factors are responsible for specific crime occurrences

Environmental Criminology and Crime Analysis Richard Wortley, Michael Townsley, 2016-11-01 Environmental criminology is a term that encompasses a range of overlapping perspectives At its core the many strands of environmental criminology are bound by a common focus on the role that the immediate environment plays in the performance of crime and a conviction that careful analyses of these environmental influences are the key to the effective investigation control and prevention of crime This new edition brings together leading theorists and practitioners in the field to provide a comprehensive integrative coverage of the field of environmental criminology and crime analysis This book is divided into three sequential parts Understanding the crime event explores routine activity approach crime pattern theory the rational choice perspective and situational precipitators of crime Analysing crime patterns discusses crime mapping offender mobility repeat victimisation geographic profiling and crime scripts Preventing and controlling crime covers topics including problem oriented policing situational crime prevention and environmental design Fully updated and including new chapters on crime scripts and offender mobility a scene setting introductory overview and critical thinking questions at the end of each chapter this text is an essential and comprehensive resource for practitioners and students taking courses on environmental criminology crime analysis and crime prevention

The Oxford Handbook of Offender Decision Making Wim Bernasco, Henk Elffers, Jean-Louis van Gelder, 2017-05-08 Although the issue of offender decision making pervades almost every discussion of crime and law enforcement only a few comprehensive texts cover and integrate information about the role of decision making in crime The Oxford Handbook of Offender Decision Making provide high quality reviews of the main paradigms in offender decision making such as rational choice theory and dual process theory It contains up to date reviews of empirical research on

decision making in a wide range of decision types including not only criminal initiation and desistance but also choice of locations times targets victims methods as well as large variety crimes including homicide robbery domestic violence burglary street crime sexual crimes and cybercrime Lastly it provides in depth treatments of the major methods used to study offender decision making including experiments observation studies surveys offender interviews and simulations

Security Technologies and Social Implications Garik Markarian, Ruza Karlovic, Holger Nitsch, Krishna Chandramouli, 2022-10-25 SECURITY TECHNOLOGIES AND SOCIAL IMPLICATIONS Explains how the latest technologies can advance policing and security identify threats and defend citizens from crime and terrorism Security

Technologies and Social Implications focuses on the development and application of new technologies that police and homeland security officers can leverage as a tool for both predictive and intelligence led investigations. The book recommends the best practices for incorporation of these technologies into day to day activities by law enforcement agencies and counter terrorism units. Practically it addresses legal technological and organizational challenges e.g. resource limitation and privacy concerns combined with challenges related to the adoption of innovative technologies. In contrast to classic tools, modern policing and security requires the development and implementation of new technologies using AI, machine learning, social media tracking, drones, robots, GIS, computer vision and more. As crime and cybercrime in particular becomes more and more sophisticated, security requires a complex mix of social measures including prevention, detection, investigation and prosecution. Key topics related to these developments and their implementations covered in *Security Technologies and Social Implications* include: New security technologies and how these technologies can be implemented in practice plus associated social, ethical or policy issues; Expertise and commentary from individuals developing and testing new technologies and individuals using the technologies within their everyday roles; The latest advancements in commercial and professional law enforcement technologies and platforms; Commentary on how technologies can advance humanity by making policing and security more efficient and keeping citizens safe. *Security Technologies and Social Implications* serves as a comprehensive resource for defense personnel and law enforcement staff, practical security engineers and trainee staff in security and police colleges to understand the latest security technologies with a critical look at their uses and limitations regarding potential ethical, regulatory or legal issues.

Geographical Information System and Crime Mapping Monika Kannan, Mehtab Singh, 2020-11-29. *Geographical Information System and Crime Mapping* features a diverse array of Geographic Information System (GIS) applications in crime analysis from general issues such as GIS as a communication process, interjurisdictional mapping and data sharing to specific applications in tracking serial killers and predicting violence prone zones. It supports readers in developing and implementing crime mapping techniques. The distribution of crime is explained with reference to theories of human ecology, transport network, built environment, housing, markets and forms of urban management including policing. Concepts are supported with relevant case studies and real time crime data to illustrate concepts and applications of crime mapping. Aimed at senior undergraduate, graduate students, professionals in GIS, Crime Analysis, Spatial Analysis, Ergonomics and human factors, this book provides an update of GIS applications for crime mapping studies. Highlights growing potential of GIS for crime mapping monitoring and reduction through developing and implementing crime mapping techniques. Covers Operational Research, Spatial Regression model, Point Analysis and so forth. Builds models helpful in police patrolling, surveillance and crime mapping from a technology perspective. Includes a dedicated section on case studies including exercises and data samples.

Risk Terrain Modeling Compendium Joel M. Caplan, Leslie W. Kennedy, 2011-07-27. *Risk Terrain Modeling* (RTM) is an approach to risk assessment in which separate map layers representing the spatial

influence and intensity of a crime risk factor is created in a geographic information system GIS. Then all map layers are combined to produce a composite risk terrain map with values that account for all risk factors at every place throughout the landscape. RTM builds upon principles of hotspot mapping, environmental criminology, and problem-oriented policing to produce maps that show where conditions are ideal or conducive for crimes to occur given the environmental contexts. RTM is a statistically valid way to articulate and communicate crime-prone areas at the micro level according to the spatial influence of criminogenic features. The Risk Terrain Modeling Manual 2010 presented the theoretical framework and complete steps of RTM. The Risk Terrain Modeling Compendium presents applications and concepts of RTM that were not already discussed at length in the RTM Manual. Part 1 presents an overview of risk terrain modeling, explains the history of its development, and discusses techniques for operationalizing spatial influence. Part 2 is a series of literature reviews with risk factors that are known to be related to a variety of crime types. Part 3 demonstrates how RTM may be applied to different crime types and settings and how it can be used for a variety of practical endeavors such as forecasting crime or evaluating place-based interventions. Part 4 concludes the book with thought pieces about RTM's potential applications to research technologies and activities related to public safety and security.

Juan Medina Ariza, Reka Solymosi, 2023-04-27. Crime mapping and analysis sit at the intersection of geocomputation, data visualisation, and cartography, spatial statistics, environmental criminology, and crime analysis. This book brings together relevant knowledge from these fields into a practical, hands-on guide providing a useful introduction and reference material for topics in crime mapping, the geography of crime, environmental criminology, and crime analysis. It can be used by students, practitioners, and academics alike, whether to develop a university course to support further training and development or to hone skills in self-teaching R and crime mapping and spatial data analysis. It is not an advanced statistics textbook but rather an applied guide and later useful reference books intended to be read and for readers to practice the learnings from each chapter in sequence. In the first part of this volume, we introduce key concepts for geographic analysis and representation and provide the reader with the foundations needed to visualise spatial crime data. We then introduce a series of tools to study spatial homogeneity and dependence. A key focus in this section is how to visualise and detect local clusters of crime and repeat victimisation. The final chapters introduce the use of basic spatial models which account for the distribution of crime across space. In terms of spatial data analysis, the focus of the book is on spatial point pattern analysis and lattice or area data analysis.
