Crimes Against Nature Environmental Criminology And Ecological Justice:

Crimes Against Nature Rob White, 2013-08-21 Crimes Against Nature provides a systematic account and analysis of the key concerns of green criminology written by one of the leading authorities in the field. The book draws upon the disciplines of environmental studies, environmental sociology and environmental management as well as criminology and socio-legal studies and draws upon a wide range of examples of crimes against the environment ranging from toxic waste logging, wildlife smuggling, bio piracy, the use and transport of ozone-depleting substances through to illegal logging and fishing, water pollution and animal abuse. The book is divided into three parts. Part 1 sets out theoretical approaches and perspectives on the subject. Part 2 explores the national and international dimensions of environmental crime and the explanations for it. Part 3 deals with the range of responses to environmental crime: environmental law enforcement, regulation, environmental crime prevention and the role of global institutions and movements.

Written by a team of world experts, it examines the central role of victim rights in the development of legal frameworks for the prevention and control of transnational and international crimes. It also discusses the challenges to delivering justice and obtaining international cooperation in efforts to deter, detect and respond to these crimes.

The book also presents an unthreatening introduction to research from the physical sciences on issues such as climate change, pollution levels and the ecological footprint of humans, providing a truly interdisciplinary foundation for green criminological analysis. To help students succeed in the course and to encourage them to see themselves as future green criminology researchers, the end-of-chapter study guides include Questions and Activities for Students that review topics students should be able to conceptualize and address, Lessons for Researchers that suggest
