**Metamodel-Based Multidisciplinary Design Optimization of Automotive Structures** Ann-Britt Ryberg,2017-09-14  
Multidisciplinary design optimization MDO can be used in computer aided engineering CAE to efficiently improve and balance performance of automotive structures However large scale MDO is not yet generally integrated within automotive product development due to several challenges of which excessive computing times is the most important one In this thesis a metamodel based MDO process that fits normal company organizations and CAE based development processes is presented The introduction of global metamodels offers means to increase computational efficiency and distribute work without implementing complicated multi level MDO methods The presented MDO process is proven to be efficient for thickness optimization studies with the objective to minimize mass It can also be used for spot weld optimization if the models are prepared correctly A comparison of different methods reveals that topology optimization which requires less model preparation and computational effort is an alternative if load cases involving simulations of linear systems are judged to be of major importance A technical challenge when performing metamodel based design optimization is lack of accuracy for metamodels representing complex responses including discontinuities which are common in for example crashworthiness applications The decision boundary from a support vector machine SVM can be used to identify the border between different types of deformation behaviour In this thesis this information is used to improve the accuracy of feedforward neural network metamodels Three different approaches are tested to split the design space and fit separate metamodels for the different regions to add estimated guiding samples to the fitting set along the boundary before a global metamodel is fitted and to use a special SVM based sequential sampling method Substantial improvements in accuracy are observed and it is found that implementing SVM based sequential sampling and estimated guiding samples can result in successful optimization studies for cases where more conventional methods fail     1981 Monte Carlo Owner's Manual ,1980     1986 Monte Carlo Owner's Manual General Motors Corporation.
