Expanding The Frontiers Of Visual Analytics And Visualization:

Expanding the Frontiers of Visual Analytics and Visualization ,2010 *Expanding the Frontiers of Visual Analytics and Visualization* John Dill,Rae Earnshaw,David Kasik,John Vince,Pak Chung Wong,2012-04-17 The field of computer graphics combines display hardware software and interactive techniques in order to display and interact with data generated by applications Visualization is concerned with exploring data and information graphically in such a way as to gain information from the data and determine significance Visual analytics is the science of analytical reasoning facilitated by interactive visual interfaces Expanding the Frontiers of Visual Analytics and Visualization provides a review of the state of the art in computer graphics visualization and visual analytics by researchers and developers who are closely involved in pioneering the latest advances in the field It is a unique presentation of multi disciplinary aspects in visualization and visual analytics architecture and displays augmented reality the use of color user interfaces and cognitive aspects and technology transfer It provides readers with insights into the latest developments in areas such as new displays and new display processors new collaboration technologies the role of visual multimedia and multimodal user interfaces visual analysis at extreme scale and adaptive visualization **Innovative Approaches of Data Visualization and Visual Analytics** Huang, Mao Lin,Huang, Weidong,2013-07-31 Due to rapid advances in hardware and software technologies network infrastructure and data have become increasingly complex requiring efforts to more effectively comprehend and analyze network topologies and information systems Innovative Approaches of Data Visualization and Visual Analytics evaluates the latest trends and developments in force based data visualization techniques addressing issues in the design development evaluation and application of algorithms and network topologies This book will assist professionals and researchers working in the fields of data analysis and information science as well as students in computer science and computer engineering in developing increasingly effective methods of knowledge creation management and preservation *User-Centered Evaluation of Visual Analytics* Jean Scholtz,2017-10-06 Visual analytics has come a long way since its inception in 2005 The amount of data in the world today has increased significantly and experts in many domains are struggling to make sense of their data Visual analytics is helping them conduct their analyses While software developers have worked for many years to develop software that helps users do their tasks this task is becoming more and more onerous as understanding the needs and data used by expert users requires more than some simple usability testing during the development process The need for a user centered evaluation process was envisioned in Illuminating the Path the seminal work on visual analytics by James Thomas and Kristin Cook in 2005 We have learned over the intervening years that not only will user centered evaluation help software developers to turn out products that have more utility the evaluation efforts can also help point out the direction for future research efforts This book describes the efforts that go into analysis including critical thinking sensemaking and various analytics techniques learned from the intelligence community Support for these components is needed in order to provide the

most utility for the expert users There are a good number of techniques for evaluating software that has been developed within the human computer interaction HCI community While some of these techniques can be used as is others require modifications These too are described in the book An essential point to stress is that the users of the domains for which visual analytics tools are being designed need to be involved in the process The work they do and the obstacles in their current processes need to be understood in order to determine both the types of evaluations needed and the metrics to use in these evaluations At this point in time very few published efforts describe more than informal evaluations The purpose of this book is to help readers understand the need for more user centered evaluations to drive both better designed products and to define areas for future research Hopefully readers will view this work as an exciting and creative effort and will join the community involved in these efforts

Data Abstraction and Pattern Identification in Time-series Data Prithiviraj Muthumanickam,2019-11-25 Data sources such as simulations sensor networks across many application domains generate large volumes of time series data which exhibit characteristics that evolve over time Visual data analysis methods can help us in exploring and understanding the underlying patterns present in time series data but due to their ever increasing size the visual data analysis process can become complex Large data sets can be handled using data abstraction techniques by transforming the raw data into a simpler format while at the same time preserving significant features that are important for the user When dealing with time series data abstraction techniques should also take into account the underlying temporal characteristics This thesis focuses on different data abstraction and pattern identification methods particularly in the cases of large 1D time series and 2D spatio temporal time series data which

exhibit spatiotemporal discontinuity Based on the dimensionality and characteristics of the data this thesis proposes a variety of efficient data adaptive and user controlled data abstraction methods that transform the raw data into a symbol sequence The transformation of raw time series into a symbol sequence can act as input to different sequence analysis methods from data mining and machine learning communities to identify interesting patterns of user behavior In the case of very long duration 1D time series locally adaptive and user controlled data approximation methods were presented to simplify the data while at the same time retaining the perceptually important features The simplified data were converted into a symbol sequence and a sketch based pattern identification was then used to identify patterns in the symbolic data using regular expression based pattern matching The method was applied to financial time series and patterns such as head and shoulders double and triple top patterns were identified using hand drawn sketches in an interactive manner Through data smoothing the data approximation step also enables visualization of inherent patterns in the time series representation while at the same time retaining perceptually important points Very long duration 2D spatio temporal eye tracking data sets that exhibit spatio temporal discontinuity was transformed into symbolic data using scalable clustering and hierarchical cluster merging processes each of which can be parallelized The raw data is transformed into a symbol sequence with each symbol representing a region of interest in the eye gaze data The identified regions of interest can also be displayed in a Space Time Cube STC that captures both the temporal and contextual information Through interactive filtering zooming and geometric transformation the STC representation along with linked views enables interactive data exploration Using different sequence analysis methods the symbol sequences are analyzed further to identify temporal patterns in the data set Data collected from air traffic control officers from the domain of Air traffic control were used as application examples to demonstrate the results
