Exploring Chemistry Julie R. Peller, 1998 A lab manual appropriate for general organic and biological chemistry course This lab manual is student friendly It is organized and written to ensure that non science majors are comfortable with chemistry labs by making the experiments more applicable to students daily lives This approach also serves to make the experiments more understandable **Experiments in General Chemistry** Steven L. Murov, 2004 EXPERIMENTS IN GENERAL CHEMISTRY Fourth Edition has been designed to stimulate curiosity and insight and to clearly connect lecture

and laboratory concepts and techniques To accomplish this goal an extensive effort has been made to develop experiments that maximize a discovery oriented approach and minimize personal hazards and ecological impact Like earlier editions the use of chromates barium lead mercury and nickel salts has been avoided The absence of these hazardous substances should minimize disposal problems and costs This lab manual focuses not only on what happens during chemical reactions but also helps students understand why chemical reactions occur The sequence of experiments has been refined to follow topics covered in most general chemistry textbooks In addition Murov has included a correlation chart that links the experiments in the manual to the corresponding chapter topics in several Brooks Cole general chemistry titles Each experiment framed by pre and post laboratory exercises and concluding thought provoking questions helps to enhance students conceptual understanding

Laboratory Experiments in General Chemistry Herman Schlundt, 2015-06-25 Excerpt from Laboratory Experiments in General Chemistry The experiments outlined in this manual are designed primarily for college students who have not had a course in chemistry in a preparatory school The exercises represent the laboratory work of a comparatively brief introductory course in General Chemistry The experiments are to be conducted under the guidance of an instructor and are to be supplemented by class room demonstrations in connection with recitations from a text book in General Chemistry for college students or by illustrated lectures and text book assignments Frequently the experiments do not furnish sufficient information to enable the student to answer some of the questions and make the explanations that are to appear in his notebook The necessary information can

generally be obtained from the text book and it is my plan to have the student use the text book and laboratory outline as companion volumes in the laboratory To facilitate the students progress in this connection page references to two widely used texts have been inserted My experience goes to show that the student will thus make very efficient use of his time that he will give care and thought to his work and that the laboratory work can be successfully made the central feature of instruction in the course In preparing the experiments the substances chosen for study have purposely been limited to avoid scattering the students efforts Intensive rather than extensive study has been the underlying idea in selecting the exercises Extended experiments on the metallic elements have not been included as I feel that this work should be undertaken in Analytical Chemistry and be allotted some of the time so largely used for laboratory practice in following a scheme of separations I fully realize the value of practice in the identification of unknown substances and this feature of laboratory work has been duly emphasized and it is hoped in a manner which preserves its educational value Emphasis has also been placed upon the general reactions of acids bases and salts the processes of oxidation and reduction and chemical changes prominent in everyday life About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Laboratory Experiments in General Chemistry (Classic Reprint) Henry Briggs North, 2017-10-14. Excerpt from *Laboratory Experiments in General Chemistry*. This manual is designed to cover a laboratory course in General Chemistry given in connection with a series of experimental lectures. It contains five hundred carefully chosen experiments on the more common elements and is so arranged that it can be used in connection with any good textbook. The work includes a large number of experiments similar to those found in other manuals and in addition numerous more advanced experiments which to the author's knowledge have never before appeared in a laboratory manual in General Chemistry. It is not supposed that any one student will perform all of these experiments. The reason for the large number is rather that experiments may be chosen to meet the needs of the various classes of students. In the author's laboratory an assignment of experiments for each laboratory period is posted on the bulletin board. A number of the simpler experiments are selected for the beginners while the more advanced and consequently more difficult exercises are assigned to those who have had previous chemical training. In order to better facilitate this method of assignment all experiments have been numbered consecutively.
