Childhood Obesity Ethical And Policy Issues:

Childhood Obesity Kristin Voigt, Stuart G. Nicholls, Garrath Williams, 2014-03-28 Childhood obesity has become a central concern in many countries and a range of policies have been implemented or proposed to address it. This co-authored book is the first to focus on the ethical and policy questions raised by childhood obesity and its prevention. Throughout the book, authors Kristin Voigt, Stuart G. Nicholls, and Garrath Williams emphasize that childhood obesity is a multi-faceted phenomenon and just one of many issues that parents, schools, and societies face. They argue that it is important to acknowledge the resulting complexities and not to think in terms of single-issue policies. After first reviewing some of the factual uncertainties about childhood obesity, the authors explore central ethical questions: What priority should be given to preventing obesity? To what extent are parents responsible? How should we think about questions of stigma and inequality? In the second part of the book, the authors consider key policy issues, including the concept of the obesogenic environment, debates about taxation and marketing, and the role that schools can play in obesity prevention. The authors argue that political debate is needed to decide the importance given to childhood obesity and how to divide responsibilities for action. These debates have no simple answers. Nonetheless, the authors argue that there are reasons for hope. There are a wide range of opportunities for action. Many of these options also promise wider social benefits.

Childhood Obesity Tamara Thompson, 2016-01-07. Childhood obesity has tripled in the United States since the 1970s, leaving many of America's children vulnerable to long-term physical and mental health issues. In an attempt to understand what is responsible for these swelling statistics, a number of health professionals, school administrators, government officials, and cultural experts have examined the possible culprits. This informative edition explores a number of those perspectives, urging readers to use essays and articles as the basis for further inquiry and individual assessment. This book examines the role of government, the responsibilities of parents, the health care costs of childhood obesity, fast food, and food marketing, as well as physical activity as it relates to childhood obesity.

Gastrospace Matteo Bonotti, Andrea Borghini, Nicola Piras, Beatrice Serini, 2024-09-02. This book explores the moral and political significance of gastrospace, the spaces where we eat. It adopts an innovative approach, combining analytic political philosophy and analytic ontology, to lay down the theoretical foundations for a multi- and interdisciplinary research agenda on the complex interconnections between

food and space Social science and humanities scholars have studied the ties between food consumption and space from multiple angles This book sets up a different and more foundational approach which engages with these bodies of work and integrates them into a coherent framework While taking the reader through a theoretical journey of varying complexities the book also illustrates the social political and cultural significance of gastrospace by surveying an array of examples from diverse historical and geographical contexts It then draws on political philosophy to show that gastrospace are sites of justice and injustice and complements this analysis by developing an ontological model for gastrospace that facilitates a systematic analysis of their social political and cultural significance The book ends with a toolbox for the study of gastrospace that different stakeholders may apply to their respective contexts of intervention This book will appeal to philosophers political scientists food scholars geographers and anyone interested in the intersection between food and space By focusing on a wide range of real world topics related to gastrospace such as racist dress codes family friendly restaurants speakeasies and gendered kitchen designs the book will also be of interest to nonacademic stakeholders such as urban planners policymakers designers managers and consumers
