Emotional Development in Atypical Children Michael

Lewis, Margaret Wolan Sullivan, 2014-03-05 Early emotional development, emotional regulation, and the links between emotion and social or cognitive functioning in atypically developing children have not received much attention. This lack is due in part to the priorities given to the educational and therapeutic needs of these children. Yet an understanding of the basic emotional processes in children with atypical development can only serve to promote more effective strategies for teaching and intervening in the lives of these children and their families and may contribute to our understanding of basic emotional processes as well. When referring to emotions, the editors mean some complex set of processes or abilities, whether or not the topic is normal or atypical development. Specifically, they use the term emotion to refer to at least three things: emotional expressions, emotional states, and emotional experiences. The focus of this volume, these three aspects of emotional life, are affected by socialization practices, maturational change, and individual biological differences, including in this case differences in children as a function of disability. Contributors examine the development of emotions in children with organic or psychological disorders as well as those in compromised social contexts, making this volume of prime importance to developmental, clinical, and social psychologists, educators, and child mental health experts.

Children's Emotions and Moods Michael Lewis, 2012-12-06 No one would deny the proposition that in order to understand human behavior and development one must understand feelings The interest in emotions is enduring Yet within the discipline of psychology the study of feelings and emotions has been somewhat less than respectable a stepchild to the fields of cognitive science and psycholinguistics Perusal of the language acquisition literature reveals a greater concern among psychologists for the acquisition of prepositions than for terms that

convey feelings Without question issues related to emotion its development and its measurement have been neglected in the research literature until quite recently From a developmental perspective Piaget and his followers have articulated a complex theory of transition and change in intellectual behavior Nearly a century ago Freud proposed an elaborate theory of personality development in which some aspects of emotional growth were considered We await the construction of a comprehensive theory of emotional development Recognizing such a need we set out over a decade ago to solve what seemed to be a relatively simple problem By observing young children could one successfully classify children in terms of individual differences on emotional dimensions such as happiness fear and anger The task appeared easy One could send graduate students into a preschool and ask them to observe children for several days after which they would rank the children in terms of differences on various emotional dimensions
