Analysis, Design and Construction of Foundations Yung Ming Cheng, Chi Wai Law, Leilei Liu, 2021-02-21 Analysis Design and Construction of Foundations outlines methods for analysis and design of the construction of shallow and deep foundations with particular reference to case studies in Hong Kong and China as well as a discussion of the methods used in other countries It introduces the main approaches used by geotechnical and structural engineers and the precautions required for planning design and construction of foundation structures Some computational methods and computer programmes are reviewed to provide tools for performing a more realistic analysis of foundation systems The authors examine in depth the methods used for constructing shallow foundations deep foundations excavation and lateral support systems slope stability analysis and construction and ground monitoring for proper site management Some new and innovative foundation construction methods are also introduced It is illustrated with case studies of failures and defects from actual construction projects Some advanced and modern theories are also covered in this book This book is more targeted towards the understanding of the basic behavior and the actual construction of many geotechnical works and this book is not dedicated to any design code or specification though Euro codes and Hong Kong code are also used in this book for illustration It is ideal for consulting geotechnical engineers undergraduate and postgraduate students

Recommendations on Excavations Deutsche Gesellschaft für

Geotechnik,2009-02-05 The aim of these recommendations is to harmonize and further develop the methods according to which excavations are prepared calculated and carried out Since 1980 these have been drawn up by the working group Excavations at the German Geotechnical Society Deutsche Gesellschaft fur Geotechnik DGGT and are similar to a set of standards They help to simplify analysis of excavation enclosures to unify load approaches and analysis procedures to guarantee the stability and serviceability of the excavation structure and its individual components and to find out an economic design of the excavation structure For this new edition all recommendations have been reworked in accordance with EN 1997 1 Eurocode 7 and DIN 1054 1 In addition new recommendations on the use of the modulus of subgrade reaction method and the finite element method FEM as well as a new chapter on excavations in soft soils have been added
