and Announcements University of Minnesota, 1898 **Advanced Organic Chemistry** Francis A. Carey, Richard J. Sundberg, 2013-11-11 The purpose of this edition like that of the earlier ones is to provide the basis for a deeper understanding of the structures of organic compounds and the mechanisms of organic reactions The level is aimed at advanced undergraduates and beginning graduate students Our goals are to solidify the student's understanding of basic concepts provided by an introduction to organic chemistry and to present more information and detail including quantitative information than can be presented in the first course in organic chemistry The first three chapters consider the fundamental topics of bonding theory stereochemistry and conformation Chapter 4 discusses the techniques that are used to study and characterize reaction mechanisms Chapter 9 focuses on aromaticity and the structural basis of aromatic stabilization The remaining chapters consider basic reaction types including substituent effects and stereochemistry As compared to the earlier editions there has been a modest degree of reorganization The emergence of free radical reactions in synthesis has led to the inclusion of certain aspects of free radical chemistry in Part B The revised chapter Chapter 12 emphasizes the distinctive mechanistic and kinetic aspects of free radical reactions The synthetic applications will be considered in Part B We have also split the topics of aromaticity and the reactions of aromatic compounds into two separate chapters Chapters 9 and 10 This may facilitate use of Chapter 9 which deals with the nature of aromaticity at an earlier stage if an instructor so desires *Advanced Organic Chemistry* Francis Carey, 2012-12-06 Of Part A 1 Chemical Bonding and Molecular Structure 1 1 Valence Bond Approach to Chemical Bonding 1 2 Bond Energies Lengths and Dipoles 1 3 Molecular Orbital Theory 1 4 Hückel Molecular Orbital Theory General References Problems 2 Stereochemical Principles 2 1 Enantiomeric Relationships 2 2 Diastereomeric Relationships 2 3 Dynamic Stereochemistry 2 4 Prochiral Relationships General References Problems 3 Conformational and Other Steric Effects 3 1 Steric Strain and Molecular Mechanics 3 2 Conformations of Acyclic Molecules 3 3 Conformations of Register ... with Announcements for ...
