Experimentation Matters Unlocking The Potential Of New Technologies For Innovation:

Experimentation Matters Stefan H. Thomke, 2003-08-05 Every company's ability to innovate depends on a process of experimentation whereby new products and services are created and existing ones improved. But the cost of experimentation is limiting. New technologies including computer modeling and simulation promise to lift that constraint by changing the economics of experimentation. They amplify the impact of learning, creating the potential for higher R & D performance and innovation and new ways of creating value for customers. Stefan H. Thomke argues that to unlock such potential, companies must not only understand the power of new technologies for experimentation but also fundamentally change their processes, organization, and management of innovation. He shows why experimentation is so critical to innovation, explains the impact of new technologies, and outlines what managers must do to integrate them successfully.

Prisoners of Hope Lanny Vincent, 2012-01-04 *Prisoners of Hope* opens a unique window into the minds and hearts of engineers, revealing two characteristics that every successful innovator must have: faith and hope. Steering clear of spiritual clichés, *Prisoners of Hope* provides practical insights and fresh accounts of innovators doing what they do best. Lanny Vincent writes his book from his thirty years' experience as facilitator, coach, and midwife of corporate innovating. He draws useful parallels between two seemingly different worlds of science and faith. Prior to working with companies like Hewlett-Packard, Sony Electronics, British Telecom, Rockwell, Weyerhaeuser, or Whirlpool, Lanny was an ordained Presbyterian minister. From his early experiences within the research and development department of the company, Kimberly Clark, the author saw familiar patterns among innovating scientists and engineers: faith patterns studied in a completely different context years before. *Prisoners of Hope* is filled with firsthand accounts of what really happens in the messy, serendipitous process of innovation and how engineers use faith as their silent partner, richly woven with the threads of current experience and ancient wisdom. *Prisoners* makes explicit what innovators do naturally to bring their vision to the marketplace, done largely on the wings of faith and hope. The author's reinterpretations of biblical stories such as David and Goliath, Moses' burning bush, and Abraham's aborted sacrifice of Isaac will help you see the mysteries of faith in action. This book is an inspiring description of how innovators use these patterns to get the lift they need for innovating and a practical play on the power and potential of faith. Find out how innovators get lift. You will get it too. A cohesive laminate of logic on innovation. Doug Gilmour, artist, advertising veteran, Clif Bar Co. It reconnected me with the fundamental power of faith and belief. Bruce Beihoff, inventor, technologist, systems modeler.

Experimentation Works Stefan H. Thomke, 2020-02-18 Don't fly blind. See how the power of experiments works for you. When it comes to improving customer experiences, trying out new business models, or developing new products, even the most experienced managers often get it wrong. They discover that intuition, experience, and big data alone don't work. What does? Running disciplined business experiments. And what if companies roll out new products or introduce new customer experiences without running these experiments? They fly blind. That's what Harvard Business School professor

Stefan Thomke shows in this rigorously researched and eye opening book It guides you through best practices in business experimentation illustrates how these practices work at leading companies and answers some fundamental questions What makes a good experiment How do you test in online and brick and mortar businesses In B2B and B2C How do you build an experimentation culture Also best practice means running many experiments Indeed some hugely successful companies such as Amazon Booking com and Microsoft run tens of thousands of controlled experiments annually engaging millions of users Thomke shows us how these and many other organizations prove that experimentation provides significant competitive advantage How can managers create this capability at their own companies Essential is developing an experimentation organization that prizes the science of testing and puts the discipline of experimentation at the center of its innovation process While it once took companies years to develop the tools for such large scale experiments advances in technology have put these tools at the fingertips of almost any business professional By combining the power of software and the rigor of controlled experiments today s managers can make better decisions create magical customer experiences and generate big financial returns Experimentation Works is your guidebook to a truly new way of thinking and innovating
