Sensing Sacred Jennifer Baldwin, 2016-08-30 *Sensing Sacred* is an edited volume that explores the critical intersection of religion and body through the religious lens of practical theology with an emphasis on sensation as the embodied means in which human beings know themselves, others, and the divine in the world. The manuscript argues that all human interaction and practice, including religious praxis, engages the body through at least one of the human senses: touch, smell, hearing, taste, sight, kinesthetics, proprioception. Unfortunately, the body and, more specifically, sensation is eclipsed in contemporary academic scholarship that is inherently bent toward the realm of theory and ideas. This is unfortunate because it neglects the body, physical or communal, as the repository and generator of culturally conditioned ideas and theory. It is ironic because all knowledge transmission minimally requires several senses, including sight, touch, and hearing. *Sensing Sacred* is organized into two parts. The first section devotes a chapter to each human sense as an avenue of accessing religious experience, while the second section explores religious practices as they specifically focus on one or more senses. The overarching aim of the volume is to explicitly highlight each sense and utilize the theoretical lenses of practical theology to bring to vivid life the connections between essential sensation and religious thinking and practice.

The Rise of Science Peter Shaver, 2018-07-17 How did science rise up to so dramatically change our world, and where will it take us in the future? This book gives a unique and broad overview. A brief history reveals the major phases and turning points in the rise of science from the earliest civilizations to the present. How was science discovered? Why did it disappear a few times? When did it become modern? A critical assessment examines how science actually happens: the triumphs, the struggles, the mistakes, and the luck. Science today is endlessly fascinating, and this book explores the current exponential growth, curiosity-driven vs. goal-oriented research, big and small science, the support of science, the relation of science to society, philosophy, and religion, and the benefits and dangers of science. Finally, a glimpse into the future: Will the current pace of science continue? Will we ever go backwards again? What remains to be discovered? Can science ever be complete? What can we imagine for the distant future? This book will be of wide interest to the general reader as well as to students and working scientists. This book provides a fresh, unique, and insightful coverage of the processes of science, its impact on society, and our understanding of the world, based on the author's experience gained from a lifetime in science. Ron Ekers, FRS, CSIRO Fellow, CSIRO Astronomy & Space Science, former President of the International Astronomical Union. Peter Shaver's comprehensive and lively survey deserves a wide readership. Scientific discoveries are part of our global culture and heritage, and they underpin our lives. It's fascinating to learn how they were made and how they fit into the grand scheme. This book isn't just for scientists; it's written for all of us.
