Heating and Water Services Design in Buildings Keith J. Moss,1996 Avoiding the need for a detailed knowledge of mathematical theory this book involves the reader in working through examples and case studies to come to a thorough understanding of the design of heating and water services in buildings

Ventilation of Buildings H.B. Awbi,2004-06-02 Hazim Awbi s Ventilation of Buildings has become established as the definitive text on the subject This new thoroughly revised edition builds on the basic principles of the original text drawing in the results of considerable new research in the field A new chapter on natural ventilation is also added and recent developments in ventilation concepts and room air distribution are also considered The text is intended for the practitioner in the building services industry the architect the postgraduate student undertaking courses or research in HVAC building services engineering or building environmental engineering and the undergraduate studying building services as a major subject Readers are assumed to be

familiar with the basic principles of fluid flow and heat transfer and some of the material requires more advanced knowledge of partial differential equations which describe the turbulent flow and heat transfer processes of fluids The book is both a presentation of the practical issues that are needed for modern ventilation system design and a survey of recent developments in the subject

Reference Data Chartered Institution of Building Services Engineers, 2001 Guide C Reference Data contains the basic physical data and calculations which form the crucial part of building services engineer background reference material Expanded and updated throughout the book contains sections on the properties of humid air water and steam on heat transfer the flow of fluids in pipes and ducts and fuels and combustion ending with a comprehensive section on units mathematical and miscellaneous data There are extensive and easy to follow tables and graphs Essential reference tool for all professional building services engineers Easy to follow tables and graphs make the data accessible for all professionals Provides you with all the necessary data to make informed decisions

Solar Radiation and Daylight Models Tariq Muneer, 2007-03-30 The cost of operating a building far exceeds the cost of constructing it and yet until recently little attention was paid to the impact of solar radiation on the costs of heating cooling and ventilation And now that there has been a surge in interest in energy efficiency and solar design architects and designers need a practical guide

to the modelling and application of solar energy data There are many different models and techniques available for calculating the distribution of solar radiation on and in buildings and these algorithms vary considerably in scope accuracy and complexity This book demonstrates which of these predictive tools gives the best results in different circumstances including explaining which models can be best used in different parts of the world The author has had over twenty five years of experience of dealing with solar energy data from four continents and has used that experience in this book to show the development not just of knowledge but also the growing sophistication of the models available to apply it

Water-resisting Basement Construction Construction Industry Research and Information Association,1995 This report summarises current best practice and provides guidance on the construction and improvements of water resisting basements It assists architects engineers surveyors and their clients with decision making on the control of the basement s internal environment and the means of construction and maintenance It takes account of viable construction methods for both deep and shallow basements together with the active and passive precautions available to achieve the most appropriate and economic environmental control system Topics covered include internal and external environments design of new basements external drainage positions water and vapour resistance of residential basements refurbishment and upgrading techniques rising groundwater comparison of British design codes example calculations for heating and ventilation and materials *ASHRAE Handbook* ,1989 Building Acoustics And Vibration: Theory And Practice Osama A B Hassan,2009-06-24 As a comprehensive reference dedicated to sound and vibration in buildings Building Acoustics and Vibration addresses the basic and advanced principles that can be used to solve practical and theoretical problems typically encountered in building and architectural acoustic practices In addition physical and mathematical concepts are introduced and developed sufficiently to make this publication a self contained and up to date source of information for readers Building Acoustics and Vibration is a must have textbook for engineering students engineers and consultants involved in the sound vibrations and building environment With comprehensibility and versatility in the presentation of knowledge this highly anticipated publication will easily fill the gap in the literature of building engineering and sciences which presently lacks an authoritative guide on the theoretical and practical aspects of building acoustics and vibration Thermal Analysis and Design of Passive Solar Buildings AK Athienitis,2013-10-18 Passive solar design techniques are becoming increasingly important in building design This design reference book takes the building engineer or physicist step by step through the thermal analysis and design of passive solar buildings In particular it emphasises two important topics the maximum utilization of available solar energy and thermal storage and the sizing of an appropriate auxiliary heating cooling system in conjunction with good thermal control Thermal Analysis and Design of Passive Solar Buildings is an important contribution towards the optimization of buildings as systems that act as natural filters between the indoor and outdoor environments while maximizing the utilization of solar energy As such it will be an essential source of information to engineers architects
