Innovation through Knowledge Transfer Robert J. Howlett, 2010-07-19 Knowledge transfer between universities business and the community is a topical subject of increasing importance The first International Conference on Innovation through Knowledge Transfer Research with Impact InnovationKT 09 held in Kingston London UK provided a rare and welcome opportunity to share some of the successes of knowledge transfer The conference attracted 150 delegates and featured 42 oral presentations This volume representing the proceedings of the conference contains 35 papers based on selected conference presentations. The papers are divided into seven sections entitled Key Knowledge Transfer Perspectives Knowledge Transfer Case Studies Innovative Knowledge Transfer Techniques Strategic and Organisational Approaches to Knowledge Transfer Knowledge transfer in the Arts and the

Community Knowledge Transfer Methodology and Practice and Innovation and Enterprise The first InnovationKT conference was unique in gathering such a tremendous range of knowledge transfer experience and expertise This volume forms a valuable resource for all those who are involved in knowledge transfer or wish to know more about it University academics can read examples of ways in which research can be commercialised increasing impact and improving relevance Knowledge transfer practitioners can find out about best practice in their subject and read case studies Companies can read about how universities can help find solutions to their problems We recommend this volume as a statement of the benefits that knowledge transfer can bring to all those involved **Integrated Sustainable Design of Buildings Paul** Appleby, 2012-10-12 This book aims to provide a guide to members of design and masterplanning teams on how to deliver sustainable development and buildings cost effectively meeting current and emerging UK and international statutory and planning requirements The book sets our a clear and understandable strategy that deals with all aspects of sustainable design and construction and the implications for delivery costs saleability and long term operation. The extensive scope includes all aspects of environmental social and economic sustainability including strategies to reduce carbon emissions and Maintainability of Facilities Yit Lin Chew, 2016-08-19 This book focuses on spearheading the the impact of climate change integration of maintainability and green facility management right from the design stage The text introduces the concept of green maintainability and discusses considerations to maximize the performance by achieving resource and energy efficiency while minimizing the total life cycle cost in embodied energy environmental impact and consumption of matter energy throughout the life cycle of a facility by doing it right the first time In this edition existing chapters have been brought up to date to include contemporary sustainability concerns such as sustainability design construction and materials and maintainability of green features Maintainability of Facilities is written for practitioners and students in architecture engineering building real estate construction project management facilities management quantity and building surveying

Intelligent Buildings: An Introduction Derek Clements-Croome,2013-10-08 This book introduces the concept of Intelligent Buildings to the wider construction community Edited by the Father of Intelligent Buildings Derek Clements Croome the book explains that intelligent buildings should be sustainable healthy technologically aware meet the needs of occupants and business and should be flexible and adaptable to deal with change This means the processes of planning design construction commissioning and facilities management including post occupancy evaluation are all important Buildings comprise many systems devised by many people and yet the relationship between buildings and people can only work satisfactorily if there is an integrated team with a holistic vision Building Futures Jane Powell, Jennifer Monahan, Chris Foulds, 2015-11-24 A reduction in the energy demand of buildings can make a major contribution to achieving national and international carbon reduction goals in addition to addressing the interlinked issues of sustainable development fuel poverty and fuel security Despite improvements in thermal efficiency the energy demand of buildings stubbornly remains unchanged or is only

declining slowly due to the challenges posed by growing populations the expectations of larger more comfortable and better equipped living spaces and an expanding commercial sector Building Futures offers an interdisciplinary approach to explore this lack of progress combining technical and social insights into the challenges of designing constructing and operating new low energy buildings as well as improving the existing inefficient building stock The twin roles of energy efficiency which is predominantly concerned with technological solutions and energy conservation which involves changing peoples behaviour are both explored The book includes a broad geographical range and scale of case studies from the UK Europe and further afield including Passivhaus in Germany and the UK Dongtan Eco City in China and retrofit houses in Denmark This book is a valuable resource for students and academics of environmental science and energy based subjects as well as construction and building management professionals Building Services Design for Energy Efficient Buildings Paul Tymkow, Savvas Tassou, Maria Kolokotroni, Hussam Jouhara, 2020-07-12 The role and influence of building services engineers are undergoing rapid change and are pivotal to achieving low carbon buildings However textbooks in the field have tended to remain fairly traditional with a detailed focus on the technicalities of heating ventilation and air conditioning HVAC systems often with little wider context This book addresses that need by embracing a contemporary understanding of the urgent challenge to address climate change together with practical approaches to energy efficiency and carbon mitigation for mechanical and electrical systems in a concise manner The essential conceptual design issues for planning the principal building services systems that influence energy efficiency are examined in detail These are HVAC and electrical systems In addition the following issues are addressed background issues on climate change whole life performance and design collaboration generic strategies for energy efficient low carbon design health and wellbeing and post occupancy evaluation building ventilation air conditioning and HVAC system selection thermal energy generation and distribution systems low energy approaches for thermal control electrical systems data collection controls and monitoring building thermal load assessment building electric power load assessment space planning and design integration with other disciplines In order to deliver buildings that help mitigate climate change impacts a new perspective is required for building services engineers from the initial conceptual design and throughout the design collaboration with other disciplines This book provides a contemporary introduction and guide to this new approach for students and practitioners alike Thermal Comfort Assessment of Buildings Salvatore Carlucci, 2013-05-24 A number of metrics for assessing human thermal response to climatic conditions have been proposed in scientific literature over the last decades They aim at describing human thermal perception of the thermal environment to which an individual or a group of people is exposed More recently a new type of discomfort index has been proposed for describing in a synthetic way long term phenomena Starting from a systematic review of a number of long term global discomfort indices they are then contrasted and compared on a reference case study in order to identify their similarities and differences and strengths and weaknesses Based on this analysis a new short term local discomfort index is proposed for the

American Adaptive comfort model Finally a new and reliable long term general discomfort index is presented It is delivered in three versions and each of them is suitable to be respectively coupled with the Fanger the European Adaptive and the American Adaptive comfort models Structural Design in Building Conservation Dimitris Theodossopoulos, 2012-07-26 No building is properly conserved if it is not structurally sound Consequently architects engineers and conservation officers need an adequate grounding in the technology the materials and the historic origins of the building in order to complete a conservation project successfully Structural Design in Building Conservation deals with design issues and technical choices showing how they are integrated with the planning and architectural outcomes in a conservation project. It brings together theory with current conservation technology discussing the possibilities of structural details and strategies in architectural expression Case studies are central to this and these are organised around such themes as the addition of roofs regualification of space strengthening and re use of fabric repristination additions completions stiffness adjustments and the correction of past mistakes The reader is encouraged to examine the technical details of these real projects and explore the possible solutions The philosophy of structural interventions is introduced in the context of conservation theories and practices in various European countries The main types of strengthening repairs and interventions are explained using different building types and the structural nature of the main elements to be strengthened linear structures frames plates and shells is explored in detail Case studies included cover a very wide range of historic types and conversions not only monumental masonry structures like neoclassical buildings major temples churches public buildings and museums but also more utilitarian structures like historic mills early reinforced concrete structures and vaulting types.
