Code of Practice for Project Management for Construction and Development CIOB (The Chartered Institute of Building), 2014-07-23. The first edition of the Code of Practice for Project Management for Construction and Development published in 1992 was groundbreaking in many ways. Now in its fifth edition, prepared by a multi-institute task force coordinated by the CIOB and including representatives from RICS, RIBA, ICE, APM and CIC, it continues to be the authoritative guide and reference to the principles and practice of project management in construction and development. Good project management in construction relies on balancing the key constraints of time, quality and cost in the context of building functionality and the requirements for sustainability within the built environment. Thoroughly updated and restructured to reflect the challenges that the industry faces today, this edition continues to drive forward the practice of construction project management. The principles of strategic planning, detailed programming and monitoring, resource allocation and effective risk management, widely used on projects of all sizes and complexity, are all fully covered. The integration of Building Information Modelling at each stage of the project life is a feature of this edition. In addition, the impact of trends and developments such as the internationalisation of construction projects and the drive for sustainability

are discussed in context Code of Practice will be of particular value to clients project management professionals and students of construction as well as to the wider construction and development industries Much of the information will also be relevant to project management professionals operating in other commercial spheres

Building Services Design for Energy Efficient Buildings Paul Tymkow, Savvas Tassou, Maria Kolokotroni, Hussam Jouhara, 2020-07-12. The role and influence of building services engineers are undergoing rapid change and are pivotal to achieving low carbon buildings. However textbooks in the field have tended to remain fairly traditional with a detailed focus on the technicalities of heating, ventilation and air conditioning (HVAC) systems often with little wider context. This book addresses that need by embracing a contemporary understanding of the urgent challenge to address climate change together with practical approaches to energy efficiency and carbon mitigation for mechanical and electrical systems in a concise manner. The essential conceptual design issues for planning the principal building services systems that influence energy efficiency are examined in detail. These are HVAC and electrical systems. In addition the following issues are addressed: background issues on climate change, whole life performance and design collaboration, generic strategies for energy efficient low carbon design, health and wellbeing and post occupancy evaluation, building ventilation, air conditioning and HVAC system selection, thermal energy generation and distribution systems, low energy approaches for thermal control, electrical systems, data collection, controls and monitoring, building thermal load assessment, building electric power load assessment, space planning and design integration with other disciplines. In order to deliver buildings that help mitigate climate change impacts a new perspective is required for building services engineers from the initial conceptual design and throughout the design collaboration with other disciplines. This book provides a contemporary introduction and guide to this new approach for students and practitioners alike.
