**Adaptive Thermal Comfort: Principles and Practice** Fergus Nicol, Michael Humphreys, Susan Roaf, 2012-03-15 The fundamental function of buildings is to provide safe and healthy shelter For the fortunate they also provide comfort and delight In the twentieth century comfort became a product produced by machines and run on cheap energy In a world where fossil fuels are becoming ever scarcer and more expensive

and the climate more extreme the challenge of designing comfortable buildings today requires a new approach This timely book is the first in a trilogy from leaders in the field which will provide just that It explains in a clear and comprehensible manner how we stay comfortable by using our bodies minds buildings and their systems to adapt to indoor and outdoor conditions which change with the weather and the climate The book is in two sections The first introduces the principles on which the theory of adaptive thermal comfort is based The second explains how to use field studies to measure thermal comfort in practice and to analyze the data gathered Architects have gradually passed responsibility for building performance to service engineers who are largely trained to see comfort as the product designed using simplistic comfort models The result has contributed to a shift to buildings that use ever more energy A growing international consensus now calls for low energy buildings This means designers must first produce robust passive structures that provide occupants with many opportunities to make changes to suit their environmental needs Ventilation using free natural energy should be preferred and mechanical conditioning only used when the climate demands it This book outlines the theory of adaptive thermal comfort that is essential to understand and inform such building designs This book should be required reading for all students teachers and practitioners of architecture building engineering and management for all who have a role in producing and occupying twenty first century adaptive low carbon comfortable buildings *Human Thermal Environments* Ken Parsons, 2007-03-22 Our responses to our thermal environment have a considerable effect on our performance and behavior not least in the realm of work There has been considerable scientific investigation of these responses and formal methods have been developed for environmental evaluation and design In recent years these have been developed to the extent that detailed national and international standards of practice have now become feasible This new edition of Ken Parson s definitive text brings us back up to date He covers hot moderate and cold environments and defines these in terms of six basic parameters air temperature radiate temperature humidity air velocity clothing worn and the person s activity There is a focus on the principles and practice of human response which incorporates psychology physiology and environmental physics with applied ergonomics Water requirements computer modeling and computer aided design are brought in as are current standards Special populations such as the aged or disabled and specialist environments such as those found in vehicles are also considered This book continues to be the standard text for the design of environments for humans to live and work safely comfortably and effectively and for the design of materials which help the same people cope with their environments [Metric Handbook](#) David Littlefield, 2012-09-10 Fully updated in reference to the latest construction standards and new building types Sustainable design fully integrated into each chapter Over 100 000 copies sold to successive generations of architects and designers this book truly belongs on every design office desk and drawing board The Metric Handbook is the major handbook of planning and design data for architects and architecture students Covering basic design data for all the major building types it is the ideal starting point for any project For each building type

the book gives the basic design requirements and all the principal dimensional data and succinct guidance on how to use the information and what regulations the designer needs to be aware of As well as buildings the Metric Handbook deals with broader aspects of design such as materials acoustics and lighting and general design data on human dimensions and space requirements The Metric Handbook really is the unique reference for solving everyday planning problems About the Author David Littlefield is a senior lecturer at the University of the West of England where he teaches in the department of planning and architecture For many years he worked as a writer and journalist David has written co written or edited over ten books on architecture Customer reviews This book is a great investment as you will use it throughout your career as an architect I have found that this book is the Bible for all planners contains so much information that no designer or planner should be without a copy An essential reference book that should be on the shelf in any design studio

Thermal Analysis and Design of Passive Solar Buildings AK Athienitis,2013-10-18 Passive solar design techniques are becoming increasingly important in building design This design reference book takes the building engineer or physicist step by step through the thermal analysis and design of passive solar buildings In particular it emphasises two important topics the maximum utilization of available solar energy and thermal storage and the sizing of an appropriate auxiliary heating cooling system in conjunction with good thermal control Thermal Analysis and Design of Passive Solar Buildings is an important contribution towards the optimization of buildings as systems that act as natural filters between the indoor and outdoor environments while maximizing the utilization of solar energy As such it will be an essential source of information to engineers architects HVAC engineers and building physicists

Managing the consumption and conservation of energy in buildings is the concern of both building managers and occupants and this use accounts for about half of UK energy consumption The need to manage this has been given new emphasis by the introduction of the Climate Change Levy Energy Management in Buildings introduces students and energy managers to the principles of managing and conserving energy consumption in buildings people use for work or leisure Energy consumption is considered for the provision of space heating hot water supply ventilation and air conditioning The author introduces the use of standard performance indicators and energy consumption yardsticks and discusses the use and application of degree days This second edition includes two new chapters on current regulations and environmental impact of building services It closely follows recent bench marking published by CIBSE and the Defra energy efficiency Best Practice Programme and covers unit 18 in the new HND in building services engineering **Heating Systems, Plant and Control** Antony R.

Day,Martin S. Ratcliffe,Keith Shepherd,2008-04-15 In many climates buildings are unable to provide comfort conditions for year round occupancy without the benefit of a heating system and most HVAC engineers will routinely be involved with issues concerning the design installation and performance of such systems Furthermore in temperate climates heating of buildings accounts for a large slice of annual carbon emissions The design of heating systems for maximum efficiency and minimum carbon emission is therefore now a matter of prime concern to all HVAC engineers The book provides an up to date review of the design engineering and control of modern heating systems Part A deals with heat generating plant While this concentrates on conventional and condensing boilers small scale combined heat and power systems and heat pumps are also discussed Part B deals with heat emitters pipe circuits and variable speed pumping hot water service optimum plant size and the vital issues of plant and system control including sequence control of multiple boilers Techniques for managing the energy use and running costs of heating systems are also discussed The authors have brought together over a half century of combined experience covering all aspects of the building services Industry to provide an up to date and comprehensive text that is both technically rigorous yet highly practical This makes the book equally relevant to the busy HVAC engineer looking for a handy practical reference the student looking to build on their basic knowledge or the researcher interested in key issues of heating system design and performance Energy Management and Operating Costs in Buildings Keith

Moss,2013-06-17 Managing the consumption and conservation of energy in buildings must now become the concern of both

building managers and occupants The provision of lighting hot water supply communications cooking space heating and cooling accounts for 45 per cent of UK energy consumption Energy Management and Operating Costs in Buildings introduces the reader to the principles of managing and conserving energy consumption in buildings people use for work or leisure Energy consumption is considered for the provision of space heating hot water supply ventilation and air conditioning The author introduces the use of standard performance indicators and energy consumption yardsticks and discusses the use and application of degree days
