Abstract

This paper provides a brief overview of the updated version of the CIRIA C660 guide on control of thermal cracking, which has been used extensively in the UK and is also popular across Europe. The updated guide is entitled CIRIA C766 – Control of cracking caused by restrained deformation in concrete. It aims towards designing reinforced concrete structures subjected to restrained thermal and shrinkage deformations in a more efficient and sustainable manner, as well as less conservatively while maintaining an adequate degree of safety.

The primary updates present a design approach more closely aligned with BS EN 1992-1-1+A1:2014 and BS EN 1992-3:2006. Revisions include limiting cracking widths, calculation of restraint considering early age and long-term effect and viscoelasticity, models to predict temperature histories of concretes containing mineral additions, as well as a more sustainable selection of parameters relevant to the estimation of crack inducing strains and minimum steel required to control crack widths. Nonetheless, there are still aspects of design that may have not been adequately addressed, potentially requiring further improvements.

Keywords: Early age/Long term cracking, crack control, restraint, thermal and shrinkage cracking

1. INTRODUCTION

Cracking due to restrained volumetric changes in reinforced concrete (RC) structures has long been a recognised problem. This cracking occurrence is predominately associated with imposed deformations due to thermal and shrinkage (autogenous and drying) related effects, at both early ages and long-term, and it is often desired to control them in terms of the resulting crack width [1]. The primary reasons that crack control in RC structures is of great importance for the serviceability limit state design quoted in C766 are: a) ensuring adequate durability of concrete depending on exposure conditions throughout a specified design service life, b)

CDM Regulations Procedures Manual Stuart D. Summerhayes, 2008-04-15 The Construction Design and Management Regulations require all those involved in construction to adopt an integrated approach to health and safety management. Clients, designers and contractors as well as planning supervisors must now work together to ensure that health and safety management issues are considered throughout all phases of a project. Appropriate procedures must be established to ensure that documentation is clear and a structured approach is adopted by all those involved in a project to ensure that the requirements of the regulations are complied with. This Procedures Manual provides a documentation system which has been developed by a practising planning supervisor. It addresses the full range of obligations of the client, planning supervisor, designer, principal contractor and contractors for compliance with the statutory requirements and features flow charts, checklists, model forms including service agreements, notices and health and safety plans, standard letters and proformas. In addition to providing the necessary documentary record, the Procedures Manual also functions as a control document for quality assurance purposes. The new edition has been revised to take account of

Approved Code of Practice for the Regulations *Design Risk Management* Stuart D. Summerhayes, 2010-02-19 The Construction Design and Management Regulations 2007 CDM Regulations 2007 is a revision of a major piece of legislation within the wide portfolio of construction related legislation. It seeks to improve the long term health and safety performance of the UK construction industry with ownership of health and safety proactively undertaken by the integrated project team. Good design has always embraced health and safety issues and design teams remain essential players as well as key contributors and communicators in matters of health and safety management. Designers have a legal responsibility to ensure that their designs account for health and safety at all stages within the holistic envelope of construction. Design Risk Management Contribution to Health and Safety gives detailed guidance to construction practitioners with design responsibility on how to identify and manage health and safety risks and on the design strategies to be followed. It seeks to focus on accountability with due emphasis on the minimisation of unnecessary bureaucracy and offers documentation trails that provide an insight to managing risk and not paperwork. Subsequently it offers a process by which designers can discharge their duties in compliance with the CDM Regulations.
