Running Buildings on Natural Energy Sue Roaf, Fergus Nicol, 2018-12-07 New thinking is essential if we are to design and occupy buildings that can keep us safe with unpredictable economies climates

energy systems and resource challenges For too long designers have relied on mechanical solutions for heating cooling and ventilating buildings The 21st century dream has to be of a better architecture that enables buildings to be run for as much of a day or year as possible on local clean reliable affordable natural energy Examples are included from different climates where the fundamental building design is right its orientation opening sizes mass and its natural ventilation systems and pathways Many modern buildings are poorly designed for climate as manifested by growing incidences of overheating experienced indoor explored here The inability of many rating systems to record and improve the climatic design of buildings raises questions about how they deal with issues of basic building performance This books points the way towards how we can understand such problems and move forward from over mechanised poorly designed buildings to a new generation of adaptable buildings designed and refurbished to run largely on natural energy and capable of evolving over time to keep their occupants safe and comfortable even in a warming world The chapters were originally published in Architectural Science Review

The Sustainable Built Environment Begum Sertyesilisik,Ahmed Al Shamma'a,2015-11-27 The text adopts an interdisciplinary approach to address the huge challenges in creating a sustainable built environment In a broad survey of critical issues it assesses procurement cost modelling and management sustainable buildings low and zero carbon technologies sustainability in utilities and the law

combines a broad holistic perspective with technical detail in an accessible and insightful manner **Air Conditioning**

Engineering W Peter Jones,2007-08-31 Designed for students and professional engineers the fifth edition of this classic text deals with fundamental science and design principles of air conditioning engineering systems W P Jones is an acknowledged expert in the field and he uses his experience as a lecturer to present the material in a logical and accessible manner always introducing new techniques with the use of worked examples Thermal Comfort in Hot Dry Climates Ahmadreza

Foruzanmehr,2017-09-14 With increases in global temperatures the risk of overheating is expected to rise around the world This results in a much higher dependency upon energy intensive cooling systems and air conditioners to provide thermal comfort but how sustainable is this in a world where problems with the production of electricity are predicted Vernacular houses in hot and dry central Iran have been adapted to the climate through passive cooling techniques and this book provides a valuable assessment of the thermal performance of such housing Shedding new light on the ability of traditional housing forms to provide thermal comfort Thermal Comfort in Hot Dry Climates identifies the main cooling systems and methods in traditional houses in central Iran and examines how architectural elements such as central courtyards distinct seasonal rooms loggias basements and wind catchers can contribute to the provision of thermal comfort in vernacular houses

Day,Martin S. Ratcliffe,Keith Shepherd,2008-04-15 In many climates buildings are unable to provide comfort conditions for year round occupancy without the benefit of a heating system and most HVAC engineers will routinely be involved with issues concerning the design installation and performance of such systems Furthermore in temperate climates heating of buildings accounts for a large slice of annual carbon emissions The design of heating systems for maximum efficiency and minimum carbon emission is therefore now a matter of prime concern to all HVAC engineers The book provides an up to date review of the design engineering and control of modern heating systems Part A deals with heat generating plant While this concentrates on conventional and condensing boilers small scale combined heat and power systems and heat pumps are also discussed Part B deals with heat emitters pipe circuits and variable speed pumping hot water service optimum plant size and the vital issues of plant and system control including sequence control of multiple boilers Techniques for managing the energy use and running costs of heating systems are also discussed The authors have brought together over a half century of combined experience covering all aspects of the building services Industry to provide an up to date and comprehensive text that is both technically rigorous yet highly practical This makes the book equally relevant to the busy HVAC engineer looking for a handy practical reference the student looking to build on their basic knowledge or the researcher interested in key

issues of heating system design and performance
