Applications in Buildings presents an investigation into the energy use and measures to improve the energy efficiency of existing building stock in the UK. The aim of this research is to assess the domestic energy use of statistically representative residential buildings and their occupants' thermal comfort by considering the significant impact of overheating risks on energy consumption and occupants' well-being. Divided into two volumes, these books present energy consumption and thermal comfort in the construction sector as a complex socio-technical problem that involves the analysis of an intrinsic interrelationship amongst dwellings, occupants and the environment. Using case studies, the authors demonstrate the significance of improving energy efficiency and its impact on occupants during long-term heatwaves in the summer. Additionally, the volumes demonstrate how dynamic thermal energy simulation can be used as a learning laboratory for future trends in housing energy consumption reduction. Volume 1: Theories, Methods and Tools presents the background to the research and the assessment methods and tools adopted by the research team. Volume 2: Performance Evaluation and Retrofitting Strategies describes the case studies and building performance and post-occupancy evaluations before making strategic policy and retrofitting recommendations. The research and roadmap presented in these volumes can be used as a guidance tool for building energy modelling and performance simulation, enabling architects, building engineers and other practitioners to close the gap between the current understanding and the actual performance of existing building stocks.

Office Buildings Pranab Kumar Nag, 2018-12-31. This book brings together concepts from the building, environmental, behavioural and health sciences to provide an interdisciplinary understanding of office and workplace design. Today, with changes in the world of work and the relentless surge in technology, offices have emerged as the repositories of organizational symbolism denoted by the spatial design of offices, physical settings and the built environment, architecture, urban locale. Drawing on Euclidian geometry that quantifies space as the distance between two or more points, a body of knowledge on office buildings, the concept of office and office space and the interrelationships of spatial and behavioural attributes in office design are elucidated. Building and office work-related illnesses, namely sick building syndrome and ailments arising from the indoor environment and the menace of musculoskeletal disorders are the alarming manifestations that critically affect employee satisfaction, morale and work outcomes. With a focus on office ergonomics, the book brings the discussion on the fundamentals of work design with emphasis on computer workstation users. Strategic guidance of lighting systems and visual performance in workplaces are directed for better application of ergonomics and improvement in office indoor environment. It discusses the profiles of bioclimatic indoor air quality, ventilation, intervention, lighting and acoustic characteristics in office buildings. Emphasis has been given to the energy performance of buildings and contemporary perspectives of building sustainability such as green office building assessment schemes and national and international building-related standards and codes. Intended for students and professionals from ergonomics, architecture, interior design as well as construction engineers, health care professionals and office planners, the book brings a unified overview of the health

safety and environment issues associated with the design of office buildings *Recent Developments in Building Diagnosis Techniques* João M.P.Q. Delgado, 2016-02-22 This book presents a collection of recent research on building diagnosis techniques related to construction pathology hygrothermal behavior and durability and diagnostic techniques It highlights recent advances and new developments in the field of building physics building anomalies in materials and components new techniques for improved energy efficiency analysis and diagnosis techniques such as infrared thermography This book will be of interest to a wide readership of professionals scientists students practitioners and lecturers
