A Guide to Energy Management in Buildings Douglas Harris, 2016-11-29 This new edition of *A Guide to Energy Management in Buildings* begins by asking why we need to control energy use in buildings and proceeds to discuss how the energy consumption of a building can be assessed or estimated through an energy audit. It then details a range of interventions to reduce energy use and outlines methods of assessing the cost effectiveness of such measures. Topics covered include where and how energy is used in buildings, energy audits, measuring and monitoring energy use, techniques for reducing energy use in buildings, legislative issues. And new in this edition: the cooling of buildings, fuel costs and smart metering and education and professional recognition. It provides a template for instigating the energy management process within an organization as well as guidance on management issues such as employee motivation and gives practical details on how to carry the process through. This book should appeal to building and facilities managers and also to students of energy management modules in FE and HE courses.

Routledge Handbook of Resilient Thermal Comfort Fergus Nicol, Hom Bahadur Rijal, Susan Roaf, 2022-04-19 This book brings together some of the finest academics in the field to address important questions around the way in which people experience their physical environments including temperature, light, air quality, acoustics and so forth. It is of importance not only to the comfort people feel indoors but also the success of any building as an environment for its stated purpose. The way in which comfort is produced and perceived has a profound effect on the energy use of a building and its

resilience to the increasing dangers posed by extreme weather events and power outages caused by climate change Research on thermal comfort is particularly important not only for the health and well being of occupants but because energy used for temperature control is responsible for a large part of the total energy budget of the built environment In recent years there has been an increasing focus on the vulnerabilities of the thermal comfort system how and why are buildings failing to provide safe and agreeable thermal environments at an affordable price Achieving comfort in buildings is a complex subject that involves physics behaviour physiology energy conservation climate change and of course architecture and urban design Bringing together the related disciplines in one volume lays strong multi disciplinary foundations for new research and design directions for resilient 21st century architecture This book heralds workable solutions and emerging directions for key fields in building the resilience of households organisations and populations in a heating world *Building Futures* Jane Powell, Jennifer Monahan, Chris Foulds, 2015-11-24 A reduction in the energy demand of buildings can make a major contribution to achieving national and international carbon reduction goals in addition to addressing the interlinked issues of sustainable development fuel poverty and fuel security Despite improvements in thermal efficiency the energy demand of buildings stubbornly remains unchanged or is only declining slowly due to the challenges posed by growing populations the expectations of larger more comfortable and better equipped living spaces and an expanding commercial sector Building Futures offers an interdisciplinary approach to explore this lack of progress combining technical and social insights into the challenges of designing constructing and operating new low energy buildings as well as improving the existing inefficient building stock The twin roles of energy efficiency which is predominantly concerned with technological solutions and energy conservation which involves changing peoples behaviour are both explored The book includes a broad geographical range and scale of case studies from the UK Europe and further afield including Passivhaus in Germany and the UK Dongtan Eco City in China and retrofit houses in Denmark This book is a valuable resource for students and academics of environmental science and energy based subjects as well as construction and building management professionals *CDM Regulations 2015 Procedures Manual* Stuart D. Summerhayes, 2016-09-26 CDM REGULATIONS CDM REGULATIONS 2015 PROCEDURES MANUAL The Construction Design and Management Regulations CDM Regulations initially came into force on 31 March 1995 to promote an integrated holistic approach to the consideration of health and safety issues associated with all aspects of construction projects The Regulations were updated in 2007 with the current version coming into force on 6 April 2015 The Regulations require all those involved in construction to adopt a team based approach to health and safety to be delivered through dutyholder responsibilities via project team risk management accountability and effective timely communication The CDM Regulations 2015 Procedures Manual articulates and explains the statutory duties and provides a documentation system to ensure associated compliance It has been thoroughly revised to take account of the amendments to the CDM Regulations brought about by the 2015 update which requires both subtle and significant changes in the

management of health and safety within the construction industry **Sustainable Lighting & Lighting for Sustainability** MDPI,2021-01-08 The role of lighting is developing into a topic considered alongside sustainable development Some years ago lighting installations fulfilled technical requirements and consumed only enough energy for the accurate completion of visual tasks This recently changed due to several discoveries in the matter of non visual paths whose influence on users well being safety mood and productivity is starting to be applied to installations Today we know that sustainable development depends on many factors but we are only now beginning to understand how accurate lighting can be used to promote development from different perspectives The present book compiles work dealing with the way lighting installations must be designed to work in an efficient and sustainable way together with the way lighting can be used to contribute to sustainable development beyond the well know savings in energy green house gas emissions and raw materials consumption The union of both concepts sustainable lighting and lighting for sustainability is what is call total lighting the global framework with which the lighting community will work in the near future **Industrial Ventilation Design Guidebook: Volume 1** Howard D. Goodfellow,Risto Kosonen,2020-07-24 The fully revised and restructured two volume 2nd edition of the Industrial Ventilation Design Guidebook develops a systematic approach to the engineering design of industrial ventilation systems and provides engineers guidance on how to implement this state of the art ventilation technology on a global basis Volume 1 Fundamentals features the latest research technology in the broad field of ventilation for contaminant control including extensive updates of the foundational chapters from the previous edition With major contributions by experts from Asia Europe and North America in the global industrial ventilation field this new edition is a valuable reference for consulting engineers working in the design of air pollution and sustainability for their industrial clients processing and manufacturing as well as mechanical process and plant engineers looking for design methodologies and advice on sensors and control algorithms for specific industrial operations so they can meet challenging targets in the low carbon economy Presents practical designs for different types of industrial systems including descriptions and new designs for ducted systems Discusses the basic processes of air and containment movements such as jets plumes and boundary flows inside ventilated spaces Introduces the new concept of target levels in the systematic design methodology such as assessing target levels for key parameters of industrial air technology and the hierarchy of different target levels Provides future directions and opportunities in the industrial design field *Visual and Non-Visual Effects of Light* Agnieszka Wolska,Dariusz Sawicki,Małgorzata Tafil-Klawe,2020-07-29 The introduction of artificial lighting extends the time of wakefulness after dark and enables work at night thus disturbing the human circadian rhythm The understanding of the physiological mechanisms of visual and non visual systems may be important for the development and use of proper light infrastructure and light interventions for different workplace settings especially for shift work conditions Visual and Non Visual Effects of Light Working Environment and Well Being presents the impact of lighting in the working environment on human health well being and visual performance The physiological

explanation of the visual and non visual effects of light on humans which discusses the biological bases of image and non image forming vision at the cellular level may be of particular interest to any professional in the field of medicine physiology and biology It is one of the intentions of this book to put forward some recommendations and examples of lighting design which take into account both the visual and non visual effects of light on humans These may be of particular interest to any professional in the field of lighting occupational safety and health and interior design What effects on health can a light overdose or light deficiency have What is bad light The authors of the monograph provide answers to these questions Just as for a physicist the dual nature of light comprises an electromagnetic wave and a photon the duality of light for a physician comprises visual and non visual effects Prof Jacek Przybylski Medical University of Warsaw This is a unique publication in the field of lighting technology The authors have skillfully combined both the technical and biomedical aspects involved which is unprecedented in the literature available As a result an important study has been created for many professional groups with a significant impact on the assessment of risks associated with LED sources Prof Andrzej Zaj c Military University of Technology Warsaw
