edition of *A Guide to Energy Management in Buildings* begins by asking why we need to control energy use in buildings and proceeds to discuss how the energy consumption of a building can be assessed or estimated through an energy audit. It then details a range of interventions to reduce energy use and outlines methods of assessing the cost effectiveness of such measures. Topics covered include where and how energy is used in buildings, energy audits, measuring and monitoring energy use, techniques for reducing energy use in buildings, legislative issues. And new in this edition: the cooling of buildings, fuel costs and smart metering and education and professional recognition. It provides a template for instigating the energy management process within an organization as well as guidance on management issues such as employee motivation and gives practical details on how to carry the process through. This book should appeal to building and facilities managers and also to students of energy management modules in FE and HE courses. *Office Buildings* Pranab Kumar Nag, 2018-12-31

This book brings together concepts from the building, environmental, behavioural and health sciences to provide an interdisciplinary understanding of office and workplace design. Today, with changes in the world of work and the relentless surge in technology, offices have emerged as the repositories of organizational symbolism denoted by the spatial design of offices, physical settings and the built environment. Architecture, urban locale, drawing on Euclidian geometry that quantifies space as the distance between two or more points, a body of knowledge on office buildings, the concept of office and office space and the interrelationships of spatial and behavioural attributes in office design are elucidated. Building and office work related illnesses, namely sick building syndrome and ailments arising from the indoor environment and the menace of musculoskeletal disorders are the alarming manifestations that critically affect employee satisfaction, morale and work outcomes. With a focus on office ergonomics, the book brings the discussion on the fundamentals of work design with emphasis on computer workstation users. Strategic guidance of lighting systems and visual performance in workplaces are directed for better application of ergonomics and improvement in office indoor environment. It discusses the profiles of bioclimatic indoor air quality, ventilation, intervention, lighting and acoustic characteristics in office buildings. Emphasis has been given to the energy performance of buildings and contemporary perspectives of building sustainability such as green office building assessment schemes and national and international building related standards and codes. Intended for students and professionals from ergonomics, architecture, interior design as well as construction engineers, health care professionals and office planners, the book brings a unified overview of the health, safety and environment issues associated with the design of office buildings. **Energy Geotechnics** Frank Wuttke, Sebastian Bauer, Marcelo Sanchez, 2016-12-01
