Randall Thomas, 2006-06-07 Written and edited by a team of specialists at Max Fordham LLP one of the UK's leading environmental and building services engineering consultancies Environmental Design is the result of their extensive experience in designing environmentally friendly buildings The principles of their approach which they have taught in numerous schools of architecture and engineering are clearly presented here The book starts with some basic scientific principles and environmental issues and then moves on to site planning energy use materials and building form Natural ventilation systems high efficiency mechanical equipment and alternative energy sources are also covered State of the art buildings of exceptional quality are incorporated throughout the text and illustrate the authors belief that environmentally responsible architecture can be visually exciting They conclude with a selection of detailed case studies of award winning projects including new for this third edition Beaufort Court King's Langley and the National Trust Headquarters Swindon This book is essential reading for architects engineers planners and students of these disciplines Energy Management in Buildings Keith Moss, 2006-05-17 Managing the consumption and conservation of energy in buildings is the concern of both building managers and occupants and this use accounts for about half of UK energy consumption The need to manage this has been given new emphasis by the introduction of the Climate Change Levy Energy Management in Buildings introduces students and energy managers to the principles of managing and conserving energy consumption in buildings people use for work or leisure Energy consumption is considered for the provision of space heating hot water supply ventilation and air

conditioning The author introduces the use of standard performance indicators and energy consumption yardsticks and discusses the use and application of degree days This second edition includes two new chapters on current regulations and environmental impact of building services It closely follows recent bench marking published by CIBSE and the Defra energy efficiency Best Practice Programme and covers unit 18 in the new HND in building services engineering

Sustainable Retrofit and Facilities Management Paul Appleby, 2013-03-05 Governments across the globe are setting targets for reducing their carbon emissions For example the UK Government has committed to an eighty per cent reduction by 2050 when twenty eight million buildings that currently exist will still be standing this represents a challenge to improve the energy efficiency of more than one building per minute between now and 2050 This is a problem that needs tackling worldwide and is a challenge to both the refurbishment sector of the global construction industry and to those who own and operate existing buildings Sustainable Retrofit and Facilities Management provides comprehensive guidance to those involved in the refurbishment and management of existing buildings on minimizing carbon emissions water consumption and waste to landfill along with enhancing the long term sustainability of a building Practical guidance is provided on measures that can be used to improve the efficiency and sustainability of existing buildings through both good management and refurbishment Also explored is the relationship between the refurbishment of existing buildings facility management and the wider community infrastructure The book looks at management tools such as post occupancy evaluation building health checks energy management software green building management toolkits and green leases Illustrated throughout with case studies and examples of best practice this is a must have handbook for engineers architects developers contractors and facility managers

Energy Management and Operating Costs in Buildings Keith Moss, 2013-06-17 Managing the consumption and conservation of energy in buildings must now become the concern of both building managers and occupants The provision of lighting hot water supply communications cooking space heating and cooling accounts for 45 per cent of UK energy consumption Energy Management and Operating Costs in Buildings introduces the reader to the principles of managing and conserving energy consumption in buildings people use for work or leisure Energy consumption is considered for the provision of space heating hot water supply ventilation and air conditioning The author introduces the use of standard performance indicators and energy consumption yardsticks and discusses the use and application of degree days

Sustainable Construction Processes Steve Goodhew, 2016-04-13 This book explores the concepts and practicalities that lead to sustainable construction It breaks new ground by providing the reader with the underlying principles of how to build sustainably and then assesses many of the tools required for the task From energy to materials and from procurement to operation all aspects play their part in turning a theoretically sustainable building project into a reality There are many guidelines for the designer on how to maximise the sustainability of buildings but this resource text supplements these by focusing on the construction and operational aspects of sustainable buildings as well as some of the more fundamental design

related considerations Offers an excellent text for those learning to construct design and operate sustainable buildings Covers the drivers for sustainable construction definitions historical impacts climate change and global regional and individual responses enables the construction professional to achieve optimum solutions both in design process and the aftercare of buildings evaluates the effectiveness of different renewable technologies and provides guidance on the practicalities of their use Alerts the reader to future trends in this field

Water Resources in the Built Environment

Colin A. Booth, Susanne M. Charlesworth, 2014-03-31 Water management is a key environmental issue in controlling of floods and reducing droughts This book provides analysis of the main issues offering solutions and describing good practice Water Resources for the Built Environment management issues and solutions develops an appreciation of the diverse complex and current themes of the water resources debate across the built environment urban development and management continuum The integration of physical and environmental sciences combined with social economic and political sciences provide a unique resource useful to policy experts scientists engineers and subject enthusiasts By taking an interdisciplinary approach water resources issues and impacts on the built environment are presented in the inventive and strategic setting of considering the constraints of delivering potable water to an ever demanding society who at the same time are increasingly aware of living in an urban landscape where excessive surface water creates a flood threatened environment hence the need to portray a balance between too little vs too much This unique approach to the water resources debate presents a multifaceted collection of chapters that address the contemporary concomitant issues of water shortage and urban flooding and proffers solutions specifically for the built environment The book is structured into three parts the first part Sections 2 3 and 4 addresses management issues and solutions to minimise water shortages and provide water security for society whilst the second part of the book Sections 5 and 6 addresses management issues and solutions to control excessive rainfall and minimise flooding impacts The third part Section 7 contextualises the issues of the earlier sections within international case studies from the developing world

Design for Dementia Bill Halsall,Michael Riley,Eef Hogervorst,2023-12-11 Design for Dementia is written by an

interdisciplinary team of professionals and academics whose aim is to present lessons learnt from the Dementia Demonstration House at the Building Research Establishment's Innovation Park. Known as Chris and Sally's House, the project represents a unique opportunity to show in practice what can be done to assist people living with dementia to continue to live at home and as part of the community with as much independence as possible. This book presents evidence-based practical design guidance backed up by over 15 combined years of research by experienced professional designers. Beginning with an introduction which provides the background to the global dementia epidemic to allow readers to gain a better understanding of the issues they must consider, the book then discusses how good design principles, planning and construction standards can be used to effectively respond to the dementia crisis. The detailed findings from research using Chris and Sally's House are presented and discussed along with practical examples and success stories ranging from simple design features to the more complex use of sensors and automated ventilation. The hope is that readers can apply the lessons learnt from Chris and Sally's House to successfully integrate solutions into the design of new or refurbished housing for the elderly and also that the tools and insights shared will inform the wider context of good housing design as well as the spectrum of constraints and design standards which often apply. This book is important reading for architects, designers, engineers and project managers but also anyone with an interest in learning about practical solutions to aid those with dementia to live well at home.
