Interdisciplinary Design Hanif Kara, 2022-03-07 Architects and engineers both claim to be designers though how they define design and the approaches they use to realize it vary widely However

their interaction has also created some of the world's most memorable enduring and impressive buildings. The unprecedented impact of digital technologies illuminates the complexity and non-linearity of the process that these designers go through while massively expanding both the ability to visualize and represent forms and to analyze their structural behavior. It has obviously changed both architecture and engineering and so also the potential for interaction between them. Interdisciplinary Design began as a course at Harvard GSD attended by graduate students in architecture and also by MIT graduate students in structural engineering and computation. In this course students and instructors examined a series of built projects in order to develop new viewpoints and communication across disciplinary boundaries in teaching practice and construction.

Lighting D.C. Pritchard, 2014-09-25 Lighting now in its sixth edition is the standard text on the principles and practice of lighting interiors and exteriors. The book introduces all the main principles of light and colour along with the design of general lighting schemes. It complies with the CIBSE lighting code and guides covers the main calculations that a lighting designer needs to do and includes worked examples. The book starts with the theory of light and how it is perceived by the eye. It looks at the units used and the subjective effect of colour. The characteristics of various types of lamp are described along with luminaires, the equipment that contains the lamps. The effects of daylight on light levels indoors are described before going on to look at the design of general lighting schemes. The book concludes with chapters looking at lighting for specific applications including roadway lighting, floodlighting and the interior of specific building types. **Designing**
