

An angle in a semi-circle is a right angle

The angle at the centre subtended by an arc of a circle is twice the angle at the circumference subtended by the same arc

Angles at the circumference of a circle subtended by the same arc are equal

Chords of equal length subtend equal angles at the centre, and conversely chords subtending equal angles at the centre have the same length

The opposite angles of a cyclic quadrilateral are supplementary

The Alternate Angle Theorem

When two chords intersect, the product of the lengths of the intervals on one chord equals the product of the lengths of the intervals on the other chord

$$\begin{aligned} 3.35 \times 3.54 &= 5.72 \times 2.88 \\ 11.86 &= 11.86 \end{aligned}$$

When a secant (meeting the circle at A and B) and a tangent (meeting the circle at T) are drawn to a circle from an external point M, the square of the length of the tangent equals the product of the lengths to the circle on the secant, $AM \times BM = TM^2$

$$\begin{aligned} AM \times BM &= TM^2 \\ 11.95 \times 4.0 &= 7.25^2 \end{aligned}$$
