Flood Risk and Social Justice Zoran Vojinovic, Michael B. Abbott, 2012-03-05 Flood Risk and Social Justice is a response to the rising significance of floods and flood related disasters worldwide as an initiative to promote a socially just approach to the problems of flood risk It integrates the human social and the technological components to provide a holistic view This book treats flooding as a multi dimensional human and natural world tragedy that must be accommodated using all the social and technological means that can be mobilised before during and after the flooding event It covers socially just flood risk mitigation practices which necessitate a wide range of multidisciplinary approaches starting from social and wider environmental needs including feedback cycles between human needs and technological means Flood Risk and Social Justice looks at how to judge whether a risk is acceptable or not by addressing an understanding of social and phenomenological considerations rather than simple calculations of probabilities multiplied by unwanted outcomes and their balancing between costs and benefits It is argued that the present flood management practice should be largely replaced by the social justice approach where particular attention is given to deciding what is the right thing to do within a much wider context Thus it insists upon the validity of modes of human understanding which cannot be addressed within the limited context of modern science Flood Risk and Social Justice is written to support a wide range of audiences and seeks to improve the dialogue between researchers and practitioners from different disciplines including post graduate engineering environmental and social science students industry practitioners academics planners environmental advocacy groups and environmental law professionals who have a strong interest in a new kind of social justice work that can act as a continuous counter balance to the various mechanisms that unceasingly give rise to profound injustices More information about this book can be found in this article written for the WaterWiki by the author <http://www.iwaterwiki.org/xwiki/bin/view/Articles/FloodRiskandSocialJustice> Authors Zoran Vojinovic is Associate Professor at the UNESCO IHE Institute for Water Education Delft the Netherlands with almost 20 years of consulting and research experience in various aspects of water industry in New Zealand Australia Asia Europe Central South America and the Caribbean Michael B Abbott is Emeritus Professor at the UNESCO IHE Institute for Water Education Delft the Netherlands and a Director of the European Institute for Industrial Leadership in Brussels He founded and developed the disciplines of Computational Hydraulics and Hydroinformatics and co founded the Journal of Hydroinformatics with Professor Roger Falconer
