[Bibliometrics and Citation Analysis](#) Nicola De Bellis,2009-03-09 Bibliometrics and Citation Analysis From the Science Citation Index to Cybermetrics offers a comprehensive overview of theories techniques concepts and applications in the interdisciplinary and steadily growing field of bibliometrics This book looks at bibliographic citation and citation networks by discussing the past present and future of bibliometrics from its foundations in the Science Citation Index to its expansion into the World Wide Web It is useful to those in every area of scholarship involved in the quantitative analysis of information exchanges but also to general readers who simply wish to familiarize themselves with an important area of information science

[Web Indicators for Research Evaluation](#) Michael Thelwall,2022-05-31 In recent years there has been an increasing demand for research evaluation within universities and other research based organisations In parallel there has been an increasing recognition that traditional citation based indicators are not able to reflect the societal impacts of research and are slow to appear This has led to the creation of new indicators for different types of research impact as well as timelier indicators mainly derived from the Web These indicators have been called altmetrics webometrics or just web metrics This book describes and evaluates a range of web indicators for aspects of societal or scholarly impact discusses the theory and practice of using and evaluating web indicators for research assessment and outlines practical strategies for obtaining many web indicators In addition to describing impact indicators for traditional scholarly outputs such as journal articles and monographs it also covers indicators for videos datasets software and other non standard scholarly outputs The book describes strategies to analyse web indicators for individual publications as well as to compare the impacts of groups of publications The practical part of the book includes descriptions of how to use the free software Webometric Analyst to gather and analyse web data This book is written for information science undergraduate and Master s students that are learning about alternative indicators or scientometrics as well as Ph D students and other researchers and practitioners using indicators to help assess research impact or to study scholarly communication

Analysis and Visualization of Citation Networks Dangzhi Zhao, Andreas Strotmann, 2022-06-01 Citation analysis the exploration of reference patterns in the scholarly and scientific literature has long been applied in a number of social sciences to study research impact knowledge flows and knowledge networks It has important information science applications as well particularly in knowledge representation and in information retrieval Recent years have seen a burgeoning interest in citation analysis to help address research management or information service issues such as university rankings research evaluation or knowledge domain visualization This renewed and growing interest stems from significant improvements in the availability and accessibility of digital bibliographic data both citation and full text and of relevant computer technologies The former provides large amounts of data and the latter the necessary tools for researchers to conduct new types of large scale citation analysis even without special access to special data collections Exciting new developments are emerging this way in many aspects of citation analysis This book critically examines both theory and practical techniques of citation network analysis and visualization one of the two main types of citation analysis the other being evaluative citation analysis To set the context for its main theme the book begins with a discussion of the foundations of citation analysis in general including an overview of what can and what cannot be done with citation analysis Chapter 1 An in depth examination of the generally accepted steps and procedures for citation network analysis follows including the concepts and techniques that are associated with each step Chapter 2 Individual issues that are particularly important in citation network analysis are then scrutinized namely field delineation and data sources for citation analysis Chapter 3 disambiguation of names and references Chapter 4 and visualization of citation networks Chapter 5 Sufficient technical detail is provided in each chapter so the book can serve as a practical how to guide to conducting citation network analysis and visualization studies While the discussion of most of the topics in this book applies to all types of citation analysis the structure of the text and the details of procedures examples and tools covered here are geared to citation network analysis rather than evaluative citation analysis This conscious choice was based on the authors observation that compared to evaluative citation analysis citation network analysis has not been covered nearly as well by dedicated books despite the fact that it has not been subject to nearly as much severe criticism and has been substantially enriched in recent years with new theory and techniques from research areas such as network science social network analysis or information visualization Table of Contents Acknowledgment Dedications Foundations of Citation Analysis Conducting Citation Network Analysis Steps Concepts Techniques and Tools Field Delineation and Data Sources for Citation Analysis Disambiguation in Citation Network Analysis Visualization of Citation Networks Appendix 3 3 Appendix 5 4 2 Bibliography Author Biographies

Handbook on the Theory and Practice of Program Evaluation Albert N. Link, Nicholas S. Vonortas, 2013-01-01 The economic crisis has simultaneously placed a strong emphasis on the role of R D as an engine of economic growth and a demand that limited public resources are

demonstrated to have had the maximum possible impact Rigorous evaluation is the key to meeting these needs This Handbook brings together highly experienced leaders in the field to provide a comprehensive and well organised state of the art overview of the range of methods available It will prove invaluable to experienced practitioners students in the field and more widely to those who want to increase their understanding of the complex and pervasive ways in which technological advance contributes to economic and social progress Luke Georghiou University of Manchester UK Theoretical and empirical research on program evaluation has advanced rapidly in scope and quality A concomitant trend is increasing pressure on policymakers to show that programs are effective Now is the time for a comprehensive status report on state of the art research and methods by leading scholars in a variety of disciplines on program evaluation This outstanding collection of contributions will serve as a valuable reference tool for academics policymakers and practitioners for many years to come Donald S Siegel University at Albany SUNY US There has been a dramatic increase in expenditures on public goods over the past thirty years particularly in the area of research and development As governments explore the many opportunities for growth in this area they and the general public are becoming increasingly concerned with the transparency accountability and performance of public programs This pioneering Handbook offers a collection of critical essays on the theory and practice of program evaluation written by some of the most well known experts in the field As this volume demonstrates a wide variety of methodologies exist to evaluate particularly the objectives and outcomes of research and development programs These include surveys statistical and econometric estimations patent analyses bibliometrics scientometrics network analyses case studies and historical tracings Contributors divide these and other methods and applications into four categories economic non economic hybrid and data driven in order to discuss the many factors that affect the utility of each technique and how that impacts the technological economic and societal forecasts of the programs in question Scholars practitioners and students with an interest in economics and innovation will all find this Handbook an invaluable resource

The Web of Knowledge Eugene Garfield,2000 This new ASIST monograph is the first to comprehensively address the history theory and practical applications of citation analysis a field which has grown from Garfield's seed of an idea and to examine its impact on scholarly research forty years after its inception In bringing together the analyses insights and reflections of more than thirty five leading lights editors Cronin and Atkins have produced both a comprehensive survey of citation indexing and its applications and a beautifully realized tribute to Eugene Garfield and his vision in honor of his seventy fifth birthday

Science Dynamics and Research Production Nikolay K. Vitanov,2016-08-01 This book deals with methods to evaluate scientific productivity In the book statistical methods deterministic and stochastic models and numerous indexes are discussed that will help the reader to understand the nonlinear science dynamics and to be able to develop or construct systems for appropriate evaluation of research productivity and management of research groups and organizations The dynamics of science structures and systems is complex and the evaluation of research productivity

requires a combination of qualitative and quantitative methods and measures. The book has three parts. The first part is devoted to mathematical models describing the importance of science for economic growth and systems for the evaluation of research organizations of different size. The second part contains descriptions and discussions of numerous indexes for the evaluation of the productivity of researchers and groups of researchers of different size up to the comparison of research productivities of research communities of nations. Part three contains discussions of non Gaussian laws connected to scientific productivity and presents various deterministic and stochastic models of science dynamics and research productivity. The book shows that many famous fat tail distributions as well as many deterministic and stochastic models and processes which are well known from physics theory of extreme events or population dynamics occur also in the description of dynamics of scientific systems and in the description of the characteristics of research productivity. This is not a surprise as scientific systems are nonlinear open and dissipative.

World University Rankings and the Future of Higher Education
Downing, Kevin, Ganotice, Jr., Fraide A., 2016-10-06 Delivering quality education to students while remaining competitive at an international level is only one of the many challenges universities face today. To attain their goals universities must adopt new strategies to achieve academic excellence. World University Rankings and the Future of Higher Education is a pivotal reference source for the latest scholarly research on the implementation of a ranking system for higher education institutions providing a thorough overview of the impacts of these rankings on educational quality. Exploring the benefits and challenges of this system in a global context this book is ideally designed for academicians, researchers, students, administrators and policy makers interested in the effects of university rankings in the education sector and beyond.

Bibliometrics and Research Evaluation
Yves Gingras, 2016-09-30 Why bibliometrics is useful for understanding the global dynamics of science but generate perverse effects when applied inappropriately in research evaluation and university rankings. The research evaluation market is booming. Ranking metrics h index and impact factors are reigning buzzwords. Government and research administrators want to evaluate everything: teachers, professors, training programs, universities using quantitative indicators. Among the tools used to measure research excellence, bibliometrics aggregate data on publications and citations has become dominant. Bibliometrics is hailed as an objective measure of research quality, a quantitative measure more useful than subjective and intuitive evaluation methods such as peer review that have been used since scientific papers were first published in the seventeenth century. In this book Yves Gingras offers a spirited argument against an unquestioning reliance on bibliometrics as an indicator of research quality. Gingras shows that bibliometric rankings have no real scientific validity rarely measuring what they pretend to. Although the study of publication and citation patterns at the proper scales can yield insights on the global dynamics of science over time, ill defined quantitative indicators often generate perverse and unintended effects on the direction of research. Moreover, abuse of bibliometrics occurs when data is manipulated to boost rankings. Gingras looks at the politics of evaluation and argues that using numbers can be a way to control scientists and

diminish their autonomy in the evaluation process Proposing precise criteria for establishing the validity of indicators at a given scale of analysis Gingras questions why universities are so eager to let invalid indicators influence their research strategy **Incentives and Performance** Isabell M. Osterloh, 2014-11-07 This book contributes to the current discussion in society politics and higher education on innovation capacity and the financial and non financial incentives for researchers The expert contributions in the book deal with implementation of incentive systems at higher education institutions in order to foster innovation On the other hand the book also discusses the extent to which governance structures from economy can be transferred to universities and how scientific performance can be measured and evaluated This book is essential for decision makers in knowledge intensive organizations and higher educational institutions dealing with the topic of performance management Representing Scientific

Knowledge Chaomei Chen, Min Song, 2017-11-25 This book is written for anyone who is interested in how a field of research evolves and the fundamental role of understanding uncertainties involved in different levels of analysis ranging from macroscopic views to meso and microscopic ones We introduce a series of computational and visual analytic techniques from research areas such as text mining deep learning information visualization and science mapping such that readers can apply these tools to the study of a subject matter of their choice In addition we set the diverse set of methods in an integrative context that draws upon insights from philosophical sociological and evolutionary theories of what drives the advances of science such that the readers of the book can guide their own research with their enriched theoretical foundations Scientific knowledge is complex A subject matter is typically built on its own set of concepts theories methodologies and findings discovered by generations of researchers and practitioners Scientific knowledge as known to the scientific community as a whole experiences constant changes Some changes are long lasting whereas others may be short lived How can we keep abreast of the state of the art as science advances How can we effectively and precisely convey the status of the current science to the general public as well as scientists across different disciplines The study of scientific knowledge in general has been overwhelmingly focused on scientific knowledge per se In contrast the status of scientific knowledge at various levels of granularity has been largely overlooked This book aims to highlight the role of uncertainties in developing a better understanding of the status of scientific knowledge at a particular time and how its status evolves over the course of the development of research Furthermore we demonstrate how the knowledge of the types of uncertainties associated with scientific claims serves as an integral and critical part of our domain expertise Encyclopedia of Library and Information

Altmetrics for Information Professionals Kim Johan Holmberg,2015-09-03

The goal of any research assessment is to evaluate the value or quality of the research in comparison to other research As quality is highly subjective and difficult to measure citations are used as a proxy Citations are an important part of scholarly communication and a significant component of research evaluation with the assumption being that highly cited work has influenced the work of many other researchers and hence it is more valuable Recently we have seen new online data sources being researched for this purpose and disruptive ideas with the power to change research assessment and perhaps even science as a whole have been born

Altmetrics is the new research area that investigates the potential of these new data source as indicators of the impact that research has made on the scientific community and beyond and thus possibly also as indicators of the societal impact of research This book will present some of these new data sources findings from earlier altmetrics research and the disruptive ideas that may radically change scholarly communication Presents some of the key ideas and innovations in earlier

research that have been driving the evolution from bibliometrics to webometrics and with the advent of social media to altmetrics Discusses the shortcomings and pitfalls of bibliometrics in research evaluation and the potential of altmetrics to overcome some of these shortcomings Presents some of the most important data sources of altmetrics the aggregators and the different stakeholders Reviews current research about altmetrics and discusses possible future trends Presents a way to measure and aggregate altmetrics according to the level of impact or type of impact they represent *Compendium of HHS Evaluations and Relevant Other Studies* HHS Policy Information Center (U.S.),1990

Citation Analysis In Research Evaluation Citation Analysis In Research Evaluation Introduction

In the digital age, access to information has become easier than ever before. The ability to download Citation Analysis In Research Evaluation Citation Analysis In Research Evaluation has revolutionized the way we consume written content. Whether you are a student looking for course material, an avid reader searching for your next favorite book, or a professional seeking research papers, the option to download Citation Analysis In Research Evaluation Citation Analysis In Research Evaluation has opened up a world of possibilities. Downloading Citation Analysis In Research Evaluation Citation Analysis In Research Evaluation provides numerous advantages over physical copies of books and documents. Firstly, it is incredibly convenient. Gone are the days of carrying around heavy textbooks or bulky folders filled with papers. With the click of a button, you can gain immediate access to valuable resources on any device. This convenience allows for efficient studying, researching, and reading on the go. Moreover, the cost-effective nature of downloading Citation Analysis In Research Evaluation Citation Analysis In Research Evaluation has democratized knowledge. Traditional books and academic journals can be expensive, making it difficult for individuals with limited financial resources to access information. By offering free PDF downloads, publishers and authors are enabling a wider audience to benefit from their work. This inclusivity promotes equal opportunities for learning and personal growth. There are numerous websites and platforms where individuals can download Citation Analysis In Research Evaluation Citation Analysis In Research Evaluation. These websites range from academic databases offering research papers and journals to online libraries with an expansive collection of books from various genres. Many authors and publishers also upload their work to specific websites, granting readers access to their

content without any charge. These platforms not only provide access to existing literature but also serve as an excellent platform for undiscovered authors to share their work with the world. However, it is essential to be cautious while downloading Citation Analysis In Research Evaluation Citation Analysis In Research Evaluation.
