Citibank Payment Address:

Phishing Rachael Lininger, Russell Dean Vines, 2005-05-06 Phishing is the hot new identity theft scam. An unsuspecting victim receives an e-mail that seems to come from a bank or other financial institution and it contains a link to a Web site where s/he is asked to provide account details. The site looks legitimate and 3 to 5 percent of people who receive the e-mail go on to surrender their information to crooks. One e-mail monitoring organization reported 2.3 billion phishing messages in February 2004 alone. If that weren't enough, the crooks have expanded their operations to include malicious code that steals identity information without the computer user's knowledge. Thousands of computers are compromised each day and phishing code is increasingly becoming part of the standard exploits. Written by a phishing security expert at a top financial institution, this unique book helps IT professionals respond to phishing incidents. After describing in detail what goes into phishing expeditions, the author provides step-by-step directions for discouraging attacks and responding to those that have already happened. In *Phishing*, Rachael Lininger offers case studies that reveal the technical ins and outs of impressive phishing attacks. Presents a step-by-step model for phishing prevention. Explains how intrusion detection systems can help prevent phishers from attaining their goal: identity theft. Delivers in-depth incident response techniques that can quickly shutdown phishing sites. Andrew DeJoy's *Behind the Swap* offers a middle office perspective on the risks and miscommunications in post-trade processing and provides a framework and solutions for a better approach. In August of 2020, Citibank made one of the worst mistakes in banking history: it accidentally sent out almost 900 million of its own funds. Many of the recipients didn't give back the money. Citibank sued. And a federal court ruled that the recipients could keep the funds. Citibank's error is not surprising. The underlying contributors that led to the mistaken payment permeate the global financial services industry.

Manual data entry decades old technological infrastructure inadequate training and systems that can't interact with one another are just a few of the problems that face post trade processing the machinery behind financial markets Unfortunately years of neglect by regulators and financial institutions themselves has left this infrastructure needlessly complex astoundingly inefficient frequently inaccurate and woefully inadequate for modern financial markets The problems are easy to see but difficult to admit For financial institutions the current system costs billions of dollars each year in labor systems maintenance and lost funds For regulators the current system precludes the ability to track systemic risk It also artificially inflates the stability of the global financial system For lawyers and prosecutors the current system allows ample opportunity for unlawful misconduct such as rogue trading and fraud Andrew DeJoy's *Behind the Swap* examines the risks involved in post trade processing in swaps and derivative markets and provides solutions to better control those risks While Andrew doesn't claim to have all the answers he does believe there is a better system that is both achievable and necessary
