

CS325: Analysis of Algorithms, Winter 2024

Practice Assignment 2*

Due: Tue, 2/6/24

Homework Policy:

1. Students should work on practice assignments individually. Each student submits to CANVAS one set of typeset solutions in pdf format.
2. Practice assignments will be graded on effort alone and will not be returned. Solutions will be posted.
3. The goal of the assignments is for you to learn solving algorithmic problems. So, I recommend spending sufficient time thinking about problems individually before discussing them with your friends.
4. You are allowed to discuss the problems with others, and you are allowed to use other resources, but you must cite them. Also, you must write everything in your own words, copying verbatim is plagiarism.
5. More items might be added to this list. ©

Problem 1. Suppose you are given a set P of n points in the plane. A point $p \in P$ is maximal in P if no other point in P is both above and to the right of p . Intuitively, the maximal points define a “staircase” with all the other points of P below it.

A set of ten points, four of which are maximal.

Describe and analyze an algorithm to compute the number of maximal points in P in $O(n \log n)$ time.

Problem 2. Call a sequence $X[1 \dots n]$ of numbers bitonic if there is an index i with $1 < i < n$, such that the prefix $X[1 \dots i]$ is increasing and the suffix $X[i \dots n]$ is decreasing. Describe an $O(\log n)$ time algorithm to search a bitonic sequence of length n for a number k .

*Some problems are from Jeff Erickson's lecture notes. Looking into similar problems from his lecture notes on recursion and dynamic programming is recommended.
