Evolutionary Explanations Of Aggression

The evolutionary view states that all aggressive behavior is a product of genetic programming and inheritance. Every individual is genetically programmed to maximize their fitness. There are two ways 1) reproducing and generating 2) by avoiding predation or by being successful predator. There are many types of aggression. Male on female aggression & the men uses the violence to keep the women faithful to him. Miller study show that 55 % of battered wives perceived jealousy as reason for husband's behaviour. The implication is that 45% of women reported that there was no jealousy so other factor must contribute. This explanation is reductionist , because it assumes that there is only one cause.

Shackelford investigated the relationship between a women's age , her husband's age and the risk that he will murder her. This study found that older man are more likely to kill the younger women. The implication of this is that younger women are more fertile therefore more desirable. From evolutionary theory point of view this is a product of men's evolved sexual proprietaries.

A second evolutionary explanation of human aggression is the evolution of homicide. One cause of aggression could be a lack of resources. Daly and Wilson carried out a study in Brazil and found that approximately 40% of victims and killers were men that were unemployed and around 70% of male victims and killers were not married. So, the inability to attract a long term partner and a lack of resources appears to lead to social competition and therefore aggression.

Flausible

A second cause of aggression could be status. In the EEA, we used to live in small groups and status was very important. A loss of status could have had catastrophic results on reproductive potential and resources. Although this is not the case now, the gene may still exist, so there has been a genome lag which is causing aggression in humans. However, human aggression focuses too much on the male aspect. Society has changed and therefore the evolutionary explanation may not seem to be as relevant in modern day society.

This explanation could be seen as reductionist because it doesn't explain how females act when they feel jealous. It emphasizes the aggression of men , but does not discuss female aggression in detail. The methodology of the research can be questioned. As questionnaires and surveys were used, the participants may not always speak the truth. Some may lie to avoid confrontation from their partner. They may receive further abuse from male if he finds out.

This explanation of human aggression may not always explain cultural differences. Some cultures do not feel the need of being aggressive and therefore don't show signs of human aggression. Whilst other cultures may believe being violent can help a male feel dominant. Therefore, the results cannot be applied to all cultures so not generalisable due to cultural differences

The Long War Against God Henry Madison Morris, Henry Morris, 2000 Considered to be a classic work *The Long War Against God* by the late Dr Henry Morris long an opponent of Christian Compromise with evolution presents in riveting detail the very old plan to undermine God's Word Drawing from the text of the Greeks Babylonians and other ancient philosophers Dr Morris shows the path that has led to today's neo Darwinists and how evolution the philosophy of death is in itself dying

Violence David Wästerfors, 2022-08-29 This book considers how the concept of violence has been interpreted used defined and explored by social researchers and thinkers It does not provide a final answer to the question of what violence is or how it should be explained or prevented and instead offers a variety of useful ways of thinking about and theorising the phenomenon mainly from a sociological standpoint It outlines four ways of understanding violence Violence as situation the tension that exists between category driven and situational explanations Violence as speciality the study of particularly violent actors and how they may be understood by reference to childhood histories technologies institutions culture class and gender Violence as politics political violence and violent politics Violence as storytelling representations of violence from a narrative perspective Concluding with reflections on possible convergences between the four approaches and new directions for research this book offers a unique and experimental approach to discussing and reconstructing the concept of violence It is essential reading for criminologists sociologists and philosophers alike

Why War? Richard Overy, 2024-06-04 An Economist Best Book of 2024 Why has war been such a consistent presence throughout the human past A leading historian explains drawing on rich examples and keen insight Richard Overy is not the first scholar to take up the title question In 1931 at the request of the League of Nations Albert Einstein asked Sigmund Freud to collaborate on a short work examining whether there was a way of delivering mankind from the menace of war Published the next year as a pamphlet entitled *Why War* it conveyed Freud's conclusion that the death drive made any deliverance impossible the psychological impulse to destruction was universal in the animal kingdom The global wars of the later 1930s and 1940s seemed ample evidence of the dismal conclusion A

preeminent historian of those wars Overy brings vast knowledge to the title question and years of experience unraveling the knotted motivations of war His approach is to separate the major drivers and motivations and consider the ways each has contributed to organized conflict They range from the impulses embedded in human biology and psychology to the incentives to conflict developed through cultural evolution to competition for resources conflicts stirred by the passions of belief the effects of ecological stresses the drive for power in leaders and nations and the search for security The discussions show remarkable range delving deep into the Neolithic past through the twentieth century world wars and up to the current conflict in Ukraine The examples are absorbing from the Roman Empire s voracious appetite for resources to the impulse to power evident in Alexander the Great Napoleon and Hitler The conclusion is not hopeful but Overy s book is a gift to readers a compact judicious engrossing examination of a fundamental question *A2 Level Psychology* Michael W.

Handbook of Comparative Evolutionary Psychology Jennifer Vonk, Todd K. Shackelford,2012-02-13 This volume brings together leading experts in comparative and evolutionary psychology Top scholars summarize the histories and possible futures of their disciplines and the contribution of each to illuminating the evolutionary forces that give rise to unique abilities in distantly and closely related species **From Pain to Violence** Felicity de Zulueta,2006-05-01 Violence is all

around us yet despite its widespread prevalence we remain unclear about its causes In this book Felicity de Zulueta begins by defining violence as distinct from aggression and then attempts to trace its origins highlighting the polarization between

those who believe mankind to be innately violent and those who see violence as the outcome of man's life experiences. As a result of her investigations, the author suggests that the current high level of violence may well be linked to the effects of childhood and adult trauma, which appear to be far more widespread than has hitherto been acknowledged. These findings are relevant to understanding why normal people can become violent in certain conditions. This is a second edition and has been fully updated. A new chapter on terrorism has been added.

Neurobiology and the Development of Human Morality: Evolution, Culture, and Wisdom (Norton Series on Interpersonal Neurobiology) Darcia Narvaez, 2014-10-20. Winner of the William James Book Award, Winner of the inaugural Expanded Reason Award. A wide-ranging exploration of the role of childhood experiences in adult morality. Moral development has traditionally been considered a matter of reasoning, of learning and acting in accordance with abstract rules. On this model, largely taken for granted in modern societies, acts of selfishness, aggression, and ecological mindlessness are failures of will, moral problems that can be solved by acting in accordance with a higher rationality. But both ancient philosophy and recent scientific scholarship emphasize implicit systems such as action schemas and perceptual filters that guide behavior and shape human development. In this integrative book, Darcia Narvaez argues that morality goes all the way down into our neurobiological and emotional development and that a person's moral architecture is largely established early on in life. Moral rationality and virtue emerge bottom-up from lived experience, so it matters what that experience is. Bringing together deep anthropological history, ethical philosophy, and contemporary neurobiological science, she demonstrates where modern industrialized societies have fallen away from the cultural practices that made us human in the first place. *Neurobiology and the Development of Human Morality* advances the field of developmental moral psychology in three key ways. First, it provides an evolutionary framework for early childhood experience grounded in developmental systems theory encompassing not only genes but a wide array of environmental and epigenetic factors. Second, it proposes a neurobiological basis for the development of moral sensibilities and cognition, describing ethical functioning at multiple levels of complexity and context before turning to a theory of the emergence of wisdom. Finally, it embraces the sociocultural orientations of our ancestors and cousins in small-band hunter-gatherer societies, the norm for 99% of human history, for a re-envisioning of moral life from the way we value and organize child-raising to how we might frame a response to human-made global ecological collapse. Integrating the latest scholarship in clinical sciences and positive psychology, Narvaez proposes a developmentally informed ecological and ethical sensibility as a way to self-author and revise the ways we think about parenting and sociality. The techniques she describes point towards an alternative vision of moral development and flourishing, one that synthesizes traditional models of executive top-down wisdom with primal wisdom built by multiple systems of biological and cultural influence from the ground up.

Human Evolutionary Psychology Louise Barrett, Robin Dunbar, John Lycett, 2002-02-17. Why do people resort to plastic surgery to look young? Why are stepchildren at greatest risk of fatal abuse? Why do we prefer gossip to algebra? Why must Dogon wives live alone in a

dark hut for five days a month Why are young children good at learning language but not sharing Over the past decade psychologists and behavioral ecologists have been finding answers to such seemingly unrelated questions by applying an evolutionary perspective to the study of human behavior and psychology Human Evolutionary Psychology is a comprehensive balanced and readable introduction to this burgeoning field It combines a sophisticated understanding of the basics of evolutionary theory with a solid grasp of empirical case studies Covering not only such traditional subjects as kin selection and mate choice this text also examines more complex understandings of marriage practices and inheritance rules and the way in which individual action influences the structure of societies and aspects of cultural evolution It critically assesses the value of evolutionary explanations to humans in both modern Western society and traditional preindustrial societies And it fairly presents debates within the field identifying areas of compatibility among sometimes competing approaches Combining a broad scope with the more in depth knowledge and sophisticated understanding needed to approach the primary literature this text is the ideal introduction to the exciting and rapidly expanding study of human evolutionary psychology

Violence And Suicidality : Perspectives In Clinical And Psychobiological Research Herman M. Van Praag, Robert Plutchik, Alan Apter, 2014-07-22 First published in 1990 This monograph series published under the auspices of the Department of Psychiatry of the Albert Einstein College of Medicine Montefiore Medical Center is meant to keep track of important developments in the profession of psychiatry to summarize what has been achieved in particular fields and to bring together the viewpoints obtained from disparate vantage points in short to capture some of the excitement ongoing in modern psychiatry both in its clinical and experimental dimensions Violence and suicidality have always been major public health issues but it is only fairly recently that they have become the focus of some major clinical and biological research efforts This is due partly to a large increase in suicide and homicide rates in the young and partly to a realization that effective management of psychiatric patients cannot be based on categorical diagnosis alone but requires an understanding of the patient's entire behavioral profile This volume attempts to describe some of the most important advances in the psychobiological understanding of the behavioral dimensions of suicide and violence that have been made over the last 10 years It is comprised of papers presented at two symposia held under the auspices of the department of psychiatry of Albert Einstein College of Medicine that were devoted to the topics of violence and suicide

Women In Human Evolution Lori Hager, 2005-08-18 This volume the first of its kind examines the role of women paleontologists and archaeologists in a field traditionally dominated by men Women researchers in this field have questioned many of the assumptions and developmental scenarios advanced by male scientists As a result of such efforts women have forged a more central role in models of human development and have radically altered the way in which human evolution is perceived This history of the feminist critique of science is of profound significance and will be of interest to all those who work in the fields of anthropology archaeology paleontology and human biology

The Primate Origins of Human Nature Carel P. Van Schaik, 2016-01-22 The Primate Origins of Human Nature Volume 3 in The Foundations of Human Biology series blends several elements from evolutionary biology as applied to primate behavioral ecology and primate psychology classical physical anthropology and evolutionary psychology of humans However unlike similar books it strives to define the human species relative to our living and extinct relatives and thus highlights uniquely derived human features The book features a truly multi disciplinary multi theory and

comparative species approach to subjects not usually presented in textbooks focused on humans such as the evolution of culture life history parenting and social organization

Evolution! J. William Schopf, 1999 The proceedings of the March 1997 symposium on Evolution Facts and Fallacies are published in this short illustrated text When Darwin originated his concept of descent with modification by means of natural selection evolution became the instant focus of uncertainty and debate In Evolution noted experts sort facts from fallacies by answering questions most often asked of Darwin's grand theory Contributors are key experts on evolution and extraterrestrial life Publisher [The Routledge International Handbook of Human Aggression](#) Jane Ireland, Philip Birch, Carol Ireland, 2018-01-03 Drawing upon international expertise and including some of the most well known academics and practitioners in the field The Routledge International Handbook of Human Aggression is the first reference work to fully capture how our understanding of aggression has been refined and reconceptualised in recent years Divided into five sections the handbook covers some of the most interesting and timely topics within human aggression research with analysis of both indirect and direct forms of aggression and including chapters on sexual aggression workplace bullying animal abuse gang violence and female aggression It recognises that in many cases aggression is an adaptive choice rather than a moral choice Providing practitioners and academics with an up to date resource that covers broad areas of interest and application the book will be essential reading for students researchers and practitioners associated with a range of social science disciplines including psychology criminology social work and sociology particularly those with an interest in developmental organisational forensic and criminal justice allied disciplines
