FACTS OF THE CASE STUDY

You are an authorised Category I Financial Service Provider who runs your own financial planning practice as a natural person. You do not receive or hold client financial products or funds of or on behalf of a client.

Richard De Beer, aged 46, and his wife, Mary De Beer, aged 44, have met with you for the first time to discuss several issues that require clarification. Richard and Mary are married in community of property. They have two sons, Lucas (who is a chemical engineer, 22 and not financially dependent on his parents) and Alexi (a 15-year-old Grade 9 learner).

Richard's Employment at Great Works (Pty) Ltd.

Richard has dedicated 12 years of his professional life to his position at Great Works (Pty) Ltd, a tenure that has been both rewarding and challenging. However, he increasingly feels that he has hit a career plateau within the organisation, seeing minimal opportunities for further professional or personal growth. Despite his proactive approach to try and elevate his department, his suggestions for innovative strategies have unfortunately fallen on deaf ears, often being dismissed by management as overly ambitious and impractical. This has left him contemplating his long-term prospects at the company. As of now, Richard enjoys a fairly comfortable remuneration package, earning R80,000 per month. He is a contributing member of the Great Works pension fund, which, after his years of consistent contributions, has grown to a respectable R1,736,885. Nonetheless, the stagnant work environment has Richard

Good Governance, Scale and Power Liza Griffin, 2014-11-13 In recent years there have been several alarming predictions about the future of the planet's fish stocks As a result many national governments and supranational institutions including the European Union have instituted reforms designed to mitigate the crisis This book examines the discourse and practice of good governance in the context of fisheries management It starts by examining the crisis of fisheries in the North Sea caused primarily by overfishing and failure of the European Union's Common Fisheries Policy It then goes on to analyse reforms to this policy enacted and planned between 2002 and 2013 and the proposition that collapse of fish stocks could occur as a result of deficiencies in new governing arrangements i e failure to apply principles of good governance The book argues that impediments to good governance practice in fisheries are not merely the result of implementation deficits but that they constitute a more systematic failure Governance theory addresses issues of power but it does not recognise the many important spatially contingent and relational forms of power that are exercised in actual governing practice For example it frequently overlooks spatial practices and strategies such as scale jumping rescaling and the discursive redrawing of governing boundaries This book exposes some of these spatial power relationships showing that the presence of such relationships has implications for accountability and effective policymaking In sum this book explores some of the ways in which we might better understand governance practice using theories of scale and relational concepts of power and in the process it offers a critique and rethinking of governance theory These reflections are made on the basis of an in depth case study of the attempted pursuit of good governance in the European Union via institutional reforms focusing particularly on the thorny and fascinating case of North Sea fisheries management
