Complex Hyperbolic Geometry Oxford Mathematical Monographs:

Complex Hyperbolic Geometry William Mark Goldman, 1999 Complex hyperbolic geometry is a particularly rich area of study enhanced by the confluence of several areas of research including Riemannian geometry complex analysis symplectic and contact geometry Lie group theory and harmonic analysis The boundary of complex hyperbolic geometry known as spherical CR or Heisenberg geometry is equally rich and although there exist accounts of analysis in such spaces there is currently no account of their geometry This book redresses the balance and provides an overview of the geometry of both the complex hyperbolic space and its boundary Motivated by applications of the theory to geometric structures moduli spaces and discrete groups it is designed to provide an introduction to this fascinating and important area and invite further research and development

Complex Hyperbolic Geometry William M. Goldman, 1992 Complex Geometry of Groups Angel Carocca, 1999 This volume presents the proceedings of the Iberoamerican Congress on Geometry Cruz del Sur held in Olmu Chile The main topic was The Geometry of Groups Curves Abelian Varieties Theoretical and Computational Aspects Participants came from all over the world The volume gathers the expanded contributions from most of the participants in the Congress Articles reflect the topic in its diversity and unity and in particular the work done on the subject by Iberoamerican mathematicians Original results and surveys are included on the following areas curves and Riemann surfaces abelian varieties and complex dynamics The approaches are varied including Kleinian groups quasiconformal mappings and Teichmüller spaces function theory moduli spaces automorphism groups merican algebraic geometry and more

Geometry and Dynamics in Gromov Hyperbolic Metric Spaces Tushar Das, David Simmons, Mariusz Urbański, 2017-04-14 This book presents the foundations of the theory of groups and semigroups acting isometrically on Gromov hyperbolic metric spaces Particular emphasis is paid to the geometry of their limit sets and on behavior not found in the proper setting The authors provide a number of examples of groups which exhibit a wide range of phenomena not to be found in the finite dimensional theory The book contains both introductory material to help beginners as well as new research results and closes with a list of attractive unsolved problems

Geometry, Topology And Dynamics Of Character Varieties William Goldman, Caroline Series, Ser Peow Tan, 2012-06-18 This volume is based on lectures given at the highly successful three week Summer School on Geometry Topology and Dynamics of Character Varieties held at the National University of Singapore's Institute for Mathematical Sciences in July 2010 Aimed at graduate students in the early stages of research the edited and refereed articles comprise an excellent introduction to the subject of the program much of which is otherwise available only in specialized texts Topics include hyperbolic structures on surfaces and their degenerations applications of ping pong lemmas in various contexts introductions to Lorenzian and complex hyperbolic geometry and representation varieties of surface groups into $PSL(2, \mathbb{C})$ and other semi simple Lie groups This volume will serve as a useful portal to students and researchers in a vibrant and multi faceted area of mathematics

Geometry, Groups and Dynamics C. S.

Aravinda, William M. Goldman, Krishnendu Gongopadhyay, Alexander Lubotzky, Mahan Mj, Anthony Weaver, 2015-05-01 This volume contains the proceedings of the ICTS Program Groups Geometry and Dynamics held December 3-16, 2012 at CEMS Almora, India. The activity was an academic tribute to Ravi S. Kulkarni on his turning seventy. Articles included in this volume both introductory and advanced surveys represent the broad area of geometry that encompasses a large portion of group theory, finite or otherwise, and dynamics in its proximity. These areas have been influenced by Kulkarni's ideas and are closely related to his work and contribution. **Geometric Complex Analysis** Jisoo Byun, Hong Rae Cho, Sung Yeon

Kim, Kang-Hyurk Lee, Jong-Do Park, 2018-09-08 The KSCV Symposium, the Korean Conference on Several Complex Variables, started in 1997 in an effort to promote the study of complex analysis and geometry. Since then the conference met semi-regularly for about 10 years and then settled on being held biannually. The sixth and tenth conferences were held in 2002 and 2014 as satellite conferences to the Beijing International Congress of Mathematicians (ICM) and the Seoul ICM respectively. The purpose of the KSCV Symposium is to organize the research talks of many leading scholars in the world to provide an opportunity for communication and to promote new researchers in this field. **Geometry and Dynamics of Groups and Spaces** Mikhail Kapranov, Sergii Kolyada, Yu. I. Manin, Pieter Moree, Leonid Potyagailo, 2008-03-05 Alexander Reznikov, 1960-2003 was a brilliant and highly original mathematician. This book presents 18 articles by prominent mathematicians and is dedicated to his memory. In addition, it contains an influential, so far unpublished manuscript by Reznikov of book length. The book further provides an extensive survey on Kleinian groups in higher dimensions and some articles centering on Reznikov as a person. *Proceedings Of The International Congress Of Mathematicians 2010 (Icm 2010) (In 4 Volumes) - Vol. I: Plenary Lectures And Ceremonies, Vols. II-IV: Invited Lectures* Rajendra Bhatia, Arup Pal, G. Rangarajan, V. Srinivas, M. Vanninathan, 2011-06-06 ICM 2010 proceedings comprises a four-volume set containing articles based on plenary lectures and invited section lectures, the Abel and Noether lectures, as well as contributions based on lectures delivered by the recipients of the Fields Medal, the Nevanlinna and Chern Prizes. The first volume will also contain the speeches at the opening and closing ceremonies and other highlights of the Congress. *Analysis and Algebra on Differentiable Manifolds* Pedro M. Gadea, Jaime Muñoz Masqué, Ihor V. Mykytyuk, 2012-12-30 This is the second edition of this best-selling problem book for students, now containing over 400 completely solved exercises on differentiable manifolds, Lie theory, fibre bundles, and Riemannian manifolds. The exercises go from elementary computations to rather sophisticated tools. Many of the definitions and theorems used throughout are explained in the first section of each chapter where they appear. A 56-page collection of formulae is included, which can be useful as an aide-memoire even for teachers and researchers on those topics. In this 2nd edition, 76 new problems, a section devoted to a generalization of Gauss' Lemma, a short novel section dealing with some properties of the energy of Hopf vector fields, an expanded collection of formulae and tables, an extended bibliography, and an Audience. This book will be useful to advanced undergraduate and graduate students of mathematics, theoretical physics, and

some branches of engineering with a rudimentary knowledge of linear and multilinear algebra Conformal Geometry of Discrete Groups and Manifolds Boris Nikolaevich Apanasov, 2000 The aim of the Expositions is to present new and important developments in pure and applied mathematics Well established in the community over more than two decades the series offers a large library of mathematical works including several important classics The volumes supply thorough and detailed expositions of the methods and ideas essential to the topics in question In addition they convey their relationships to other parts of mathematics The series is addressed to advanced readers interested in a thorough study of the subject Editorial Board Lev Birbrair Universidade Federal do Cear Fortaleza Brasil Walter D Neumann Columbia University New York USA Markus J Pflaum University of Colorado Boulder USA Dierk Schleicher Jacobs University Bremen Germany Katrin Wendland University of Freiburg Germany Honorary Editor Victor P Maslov Russian Academy of Sciences Moscow Russia Titles in planning include Yuri A Bahturin Identical Relations in Lie Algebras 2019 Yakov G Berkovich Lev G Kazarin and Emmanuel M Zhmud Characters of Finite Groups Volume 2 2019 Jorge Herbert Soares de Lira Variational Problems for Hypersurfaces in Riemannian Manifolds 2019 Volker Mayer Mariusz Urbański and Anna Zdunik Random and Conformal Dynamical Systems 2021 Ioannis Diamantis Bostjan Gabrovsek Sofia Lambropoulou and Maciej Mroczkowski Knot Theory of Lens Spaces 2021

In the Tradition of Thurston II Ken'ichi Ohshika, Athanase Papadopoulos, 2022-08-02 The purpose of this volume and of the other volumes in the same series is to provide a collection of surveys that allows the reader to learn the important aspects of William Thurston's heritage Thurston's ideas have altered the course of twentieth century mathematics and they continue to have a significant influence on succeeding generations of mathematicians The topics covered in the present volume include complex hyperbolic Kleinian groups Mbius structures hyperbolic ends cone 3 manifolds Thurston's norm surgeries in representation varieties triangulations spaces of polygonal decompositions and of singular flat structures on surfaces combination theorems in the theories of Kleinian groups hyperbolic groups and holomorphic dynamics the dynamics and iteration of rational maps automatic groups and the combinatorics of right angled Artin groups Spherical CR Geometry and Dehn Surgery (AM-165) Richard Evan Schwartz, 2007-02-18 This book proves an analogue of William Thurston's celebrated hyperbolic Dehn surgery theorem in the context of complex hyperbolic discrete groups and then derives two main geometric consequences from it The first is the construction of large numbers of closed real hyperbolic 3 manifolds which bound complex hyperbolic orbifolds the only known examples of closed manifolds that simultaneously have these two kinds of geometric structures The second is a complete understanding of the structure of complex hyperbolic reflection triangle groups in cases where the angle is small In an accessible and straightforward manner Richard Evan Schwartz also presents a large amount of useful information on complex hyperbolic geometry and discrete groups Schwartz relies on elementary proofs and avoids quotations of preexisting technical material as much as possible For this reason this book will benefit graduate students seeking entry into this emerging area of research as well as researchers in allied fields such as

Kleinian groups and CR geometry *Geometries and Transformations* Norman W. Johnson, 2018-06-07 A readable exposition of how Euclidean and other geometries can be distinguished using linear algebra and transformation groups **Kleinian Groups and Hyperbolic 3-Manifolds** Y. Komori, V. Markovic, C. Series, 2003-11-10 The subject of Kleinian groups and hyperbolic 3 manifolds is currently undergoing explosively fast development with many old problems and conjectures close to resolution This volume proceedings of the Warwick workshop in September 2001 contains expositions of many of these breakthroughs including Minsky's lectures on the first half of the proof of the Ending Lamination Conjecture the Bers Density Conjecture by Brock and Bromberg the Tameness Conjecture by Kleiner and Souto the state of the art in cone manifolds by Hodgson and Kerckhoff and the counter example to Thurston's K_2 conjecture by Epstein Marden and Markovic It also contains Jørgensen's famous paper On pairs of once punctured tori in print for the first time The excellent collection of papers here will appeal to graduate students who will find much here to inspire them and established researchers who will find this valuable as a snapshot of current research *Geometry, Topology and Physics* Boris N. Apanasov, Steven B. Bradlow, Waldyr A. Rodrigues, Karen K. Uhlenbeck, 2011-06-24 The series is aimed specifically at publishing peer reviewed reviews and contributions presented at workshops and conferences Each volume is associated with a particular conference symposium or workshop These events cover various topics within pure and applied mathematics and provide up to date coverage of new developments methods and applications **Analysis and Algebra on Differentiable Manifolds: A Workbook for Students and Teachers** P.M. Gadea, J. Muñoz Masqué, 2009-12-12 A famous Swiss professor gave a student's course in Basel on Riemann surfaces After a couple of lectures a student asked him Professor you have as yet not given an exact definition of a Riemann surface The professor answered With Riemann surfaces the main thing is to UNDERSTAND them not to define them The student's objection was reasonable From a formal viewpoint it is of course necessary to start as soon as possible with strict definitions but the professor's answer also has a substantial background The pure definition of a Riemann surface as a complex 1 dimensional complex analytic manifold contributes little to a true understanding It takes a long time to really be familiar with what a Riemann's face is This example is typical for the objects of global analysis manifolds with structures There are complex concrete definitions but these do not automatically explain what they really are what we can do with them which operations they really admit how rigid they are Hence there arises the natural question how to attain a deeper understanding One well known way to gain an understanding is through underpinning the definitions theorems and constructions with hierarchies of examples counterexamples and exercises Their choice construction and logical order is for any teacher in global analysis an interesting important and fun creating task **Function Spaces in Modern Analysis** Krzysztof Jarosz, 2011-07-18 This volume contains the proceedings of the Sixth Conference on Function Spaces which was held from May 18-22 2010 at Southern Illinois University at Edwardsville The papers cover a broad range of topics including spaces and algebras of analytic functions of one and of many variables and operators on such spaces spaces of integrable

functions spaces of Banach valued functions isometries of function spaces geometry of Banach spaces and other related subjects **Dynamics of Discrete Group Action** Boris N. Apanasov, 2024-07-22 Provides the first systematic study of geometry and topology of locally symmetric rank one manifolds and dynamics of discrete action of their fundamental groups In addition to geometry and topology this study involves several other areas of Mathematics from algebra of varieties of groups representations and geometric group theory to geometric analysis including classical questions from function theory
