Complex Predicates:

Complex Predicates Mengistu Amberber, Brett Baker, Mark Harvey, 2010-04-22 Complex predicates are multipredicational but monoclausal structures. They have proven problematic for linguistic theory particularly for proposed distinctions between the lexicon morphology and syntax. This volume focuses on the mapping from morphosyntactic structures to event structure and in particular the constraints on possible mappings. The volume showcases the coverb construction a complex predicate construction which though widespread has received little attention in the literature. The coverb construction contrasts with more familiar serial verb constructions. The coverb construction generally maps only to event structures like those of monomorphemic verbs whereas serial verb constructions map to a range of event structures differing from those of monomorphemic verbs. The volume coverage is truly cross linguistic including languages from Australia Papua New Guinea Southeast Asia the Indian subcontinent East Africa and North America. The volume establishes a new arena of research in event structure syntax and cross linguistic typology. Complex Predicates Ad Neeleman, 1994 *Approaches to Complex Predicates* Léa Nash, Pollet Samvelian, 2016-04-26 Complex predicates can be loosely defined as a sequence of items that behave as a single predicate projecting a single argument structure within a clause. Each of the members of the predicate contributes part of the information ordinarily associated with a single head. The present volume presents a collection of theoretical linguistic results on the study of complex predicates in different perspectives and with a variety of approaches. Important empirical and theoretical issues cutting across various subfields of linguistics are being addressed in this book such as Syntactic and semantic modeling of complex predicate formation compositionality argument structure event structure Differences between syntactic and morphological processes of lexeme formation Typological and diachronic issues in complex predicate formation Neo Davidsonian analyses of abstract predicate decomposition and its morphological correlates Contributors are Ane Berro Denis Creissels Hannah Gibson Adele Goldberg Lutz Marten Annie Montaut L a Nash Pooja Paul Pollet Samvelian Peter Svenonius and Susanne Wurmbrand Complex Predicates in Nonderivational Syntax Erhard Hinrichs, Andreas Kathol, Tsuneko Nakazawa, 2020-06-15 Complex Predicates in Nonderivational Syntax collects recent research in complex predicates within a variety of languages such as German Dutch Italian French Korean and Urdu. Recognizing that complex predicates is one of the most active research areas in nonderivational theories of grammar contributors focus on diverse aspects of complex predicate phenomena including order variation constituency relations interactions with other construction types argument relations and the syntax morphology interface. Their concentration on issues of linguistically adequate description open these articles to those interested in syntax semantics morphology computational linguistics and natural language processing. It includes essays written by the leading researchers in the field including Ivan Sag. It makes the clearest and most advanced statement to date about complex predicates. Complex Predicates in Oceanic Languages Isabelle Bril, Françoise Ozanne-Rivierre, 2012-04-17 Serial verbs and complex predicates

have a long history of research yet there is comparatively little documentation on Oceanic languages This volume presents new data for further typological studies While previous research on serial verbs in Oceanic languages was mostly devoted to core serial constructions with non contiguous sV o sV o nuclei this volume contributes a more detailed investigation of the nuclear type of complex predicates involving contiguous sVV o nuclei Complex predicates of the form VV may correspond to two different syntactic structures either co ranking or hierarchized head modifier Though the VV pattern does evidence a tendency towards structural compression often entailing the fusion of the argument structures of two or more nuclei yet it cannot be reduced to cases of co lexicalization compounding or grammaticalization The data also show the nuclear type to be compatible with all types of basic word orders VSO VOS SVO SOV with no evidence that this results from any word order change This challenges the claim that nuclear serialization correlates with verb final order and core serialization with verb medial order

Argument Realisation in Complex Predicates and Complex Events Brian Nolan, Elke

Diedrichsen, 2017-01-26 This book offers a comprehensive investigative study of argument realisation in complex predicates and complex events at the syntax semantic interface across a wide variety of the world s languages ranging over languages such as German Irish Sicilian and Italian Lithuanian Estonian and other Finno Ugric languages Pitjantjatjara Yankunytjatjara and Ngaanyatjarra from Australia s Western Desert region Japanese Tepehua Totonacan Mexico Cheyenne Mexican Spanish Boharic Coptic and Persian This volume examines the syntactic variation of complex events complex predicates and multi verb constructions within a single clause where the clause is view as representing a single event studying their semantics and syntax within functional cognitive and constructional frameworks to arrive at a better understanding of their cross linguistic behaviour and how they resonate in syntax These constructions manifest considerable variability in cross linguistic comparisons of complex predicate formation In European languages for example typically one of the verbs in a verb verb construction highlights a phase of an underspecified event while the matrix verb specifies the actual event In contrast serial verbs require each verb to provide a sub event dimension within a complex event that is viewed holistically as unitary in syntax This book contributes to an understanding of complex events complex predicates and multi verb constructions across languages their syntactic constructional patterns and argument realisation

Complex Predicates Alex Alsina, Joan

Bresnan, Peter Sells, 1997-04-28 Complex predicates can be defined as predicates which are composed of more than one grammatical element either morphemes or words each of which contributes a non trivial part of the information of the complex predicate The papers collected in this volume which were presented at a workshop at Stanford in 1993 represent a variety of approaches to the question of the range and nature of complex predicates and draw on data from a wide spectrum of languages This collection develops a better understanding of the range of phenomena that a general theory of complex predicates would have to account for and to see what kinds of linguistic ideas and methodologies would be necessary for such a task

The Structure of Complex Predicates in Urdu Miriam Butt, 1995-07 This book takes a detailed look at two

differing complex predicates in the South Asian language Urdu The Urdu permissive in particular brings into focus the problem of the syntax semantics mismatch An examination of the syntactic properties of this complex predicate shows that it is formed by the combination of two semantic heads but that this combination is not mirrored in the syntax in terms of any kind of syntactic or lexical incorporation **Composite Predicates in English** Ray Cattell,2020-01-13 Preliminary Material

New Challenges in Typology Matti Miestamo,Bernhard Wälchli,2007 The sixteen chapters in this volume are written by typologists and typologically oriented field linguists who have completed their Ph D theses in the first four years of this millennium The authors address selected theoretical questions of general linguistic relevance drawing from a wealth of data hitherto unfamiliar to the general linguistic audience The general aim is to broaden the horizons of typology by revisiting existing typologies with larger language samples exploring domains not considered in typology before taking linguistic diversity more seriously strengthening the connection between typology and areal linguistics and bridging the gap to other fields such as historical linguistics and sociolinguistics The papers cover grammatical phenomena from phonology morphology up to the syntax of complex sentences The linguistic phenomena scrutinized include the following foot and stress tone infixation inflection vs derivation word formation polysynthesis suppletion person marking reflexives alignment transitivity tense aspect mood systems negation interrogation converb systems and complex sentences More general methodological and theoretical issues such as reconstruction markedness semantic maps templates and use of parallel corpora are also addressed The contributions in this volume draw from many traditional fields of linguistics simultaneously and show that it is becoming harder and maybe also less desirable to keep them separate especially when taking a broadly cross linguistic approach to language The book is of interest to typologists and field linguists as well as to any linguists

interested in theoretical issues in different subfields of linguistics **Predicates and Their Subjects** Susan Rothstein, 2012-12-06 *Predicates and their Subjects* is an in depth study of the syntax semantics interface focusing on the structure of the subject predicate relation Starting from where the author's 1983 dissertation left off the book argues that there is syntactic constraint that clauses small and tensed are constructed out of a one place unsaturated expression the predicate which must be applied to a syntactic argument its subject The author shows that this predication relation cannot be reduced to a thematic relation or a projection of argument structure but must be a purely syntactic constraint Chapters in the book show how the syntactic predication relation is semantically interpreted and how the predication relation explains constraints on DP raising and on the distribution of pleonastics in English The second half of the book extends the theory of predication to cover copular constructions it includes an account of the structure of small clauses in Hebrew of the use of *be* in predicative and identity sentences in English and concludes with a study of the meaning of the verb *be* **The Structure of Complex Predicates in Urdu** Miriam Jessica Butt, 1993 **Proceedings of the 9th West Coast Conference on Formal Linguistics** Stanford Linguistics Association, 1991 Most of the papers presented at the 1990 West Coast Conference on Formal Linguistics are included in this volume This annual publication not readily available in the past makes the latest research in formal linguistics available to a wider audience Aaron Halpern is a graduate student in linguistics at Stanford University **Morphosyntax** William Croft, 2022-08-04 Taking a functional approach this book provides a thorough overview of Morphosyntax and sets out a framework for syntactic constructions *Complex Predicates* Leila Lomashvili, 2011-03-16 Complex predicates present different levels of complexity at the syntactic and morphological levels crosslinguistically The focus of this book is a subset of these constructions causative and applicative in three polysynthetic languages of the South Caucasian language family in which the functional morphology associated with the argument structure of these constructions is unusually rich Due to such focus the syntax morphology interface in causative and applicative constructions is subject to scrutiny in two main chapters of the book The analysis includes the argument structure of causatives and applicatives along with the morpho phonological instantiation of the functional heads involved in these constructions The book is written very clearly and is accessible for a wide audience including undergraduate students in the introductory syntax and morphology courses as well as graduate students in basic syntax courses and seminars in linguistics It naturally appeals to a general linguistic audience interested in theoretical linguistics **Unity of Science** Robert L. Causey, 2012-12-06 The first section of this chapter describes the major goals of this investigation and the general strategy of my presentation The remaining three sections review some requisite background material and introduce some terminology and notation used in the book Section B contains a brief review of some of the ideas and notation of elementary logic and set theory Section C contains an introductory discussion of kinds and attributes Section D presents some basic ideas about laws and law sentences A GENERAL PLAN OF THE BOOK Basic scientific research is directed towards the goals of increasing our knowledge of the

world and our understanding of the world Knowledge increases through the discovery and confirmation of facts and laws Understanding results from the explanation of known facts and laws and through the formulation of general systematic theories Other things being equal we tend to feel that our understanding of a class of phenomena increases as we develop increasingly general and intuitively unified theories of that class of phenomena It is therefore natural to consider the possibility of one very general unified theory which at least in principle governs all known phenomena The dream of obtaining such a theory and the understanding that it would provide has motivated an enormous amount of research by both scientists and philosophers

Verb-Verb Complexes in Asian Languages Taro Kageyama, Peter E. Hook, Prashant Pardeshi, 2021-02-20 This volume is the first to present a detailed survey of the systems of verb verb complexes in Asian languages from both a synchronic and diachronic perspective Many Asian languages share to a greater or lesser extent a unique class of compound verbs consisting of a main verb and a quasi auxiliary verb known as a vector or explicator These quasi auxiliary verbs exhibit unique grammatical behaviour that suggests that they have an intermediate status between full lexical verbs and wholly reduced auxiliaries They are also semantically unique in that when they are combined with main verbs they can convey a rich variety of functional meanings beyond the traditional notions of tense aspect and modality such as manner and intensity of action benefaction for speaker or hearer and polite or derogatory styles in speech In this book leading specialists in a range of Asian languages offer an in depth analysis of the long standing questions relating to the diachrony and geographical distribution of verb verb complexes The findings have implications for the general understanding of the grammaticalization of verb categories complex predicate formation aktionsart and event semantics the morphology syntax semantics interface areal linguistics and typology

The Language and Reality of Time Thomas Sattig, 2006-05-11 Thomas Sattig's book develops a comprehensive framework for doing philosophy of time He brings together a variety of different perspectives linking our ordinary conception of time with the physicist's conception and linking questions about time addressed in metaphysics with questions addressed in the philosophy of language Within this framework Sattig explores the temporal dimension of the material world in relation to the temporal dimension of our ordinary discourse about the world The discussion is centred around the dispute between three dimensionalists and four dimensionalists about whether the temporal profile of ordinary objects mirrors their spatial profile Are ordinary objects extended in time in the same way in which they are extended in space Do they have temporal as well as spatial parts Four dimensionalists say yes three dimensionalists say no Sattig develops an original three dimensionalist picture of the material world and argues that this picture is preferable to its four dimensionalists rivals if ordinary thought and talk are taken seriously Among the issues that Sattig discusses are the metaphysics of persistence change composition location coincidence and relativity the ontology of past present and future and the semantics of predication tense temporal modifiers and sortal terms
