Abstract:

Taking abstraction as the starting point, we build a complex, *self-organizing fuzzy logic system*. Such a system, being built on top of abstraction as the base, turns out to be just a special outcome of the laws of abstraction. As the system is self-organizing, it runs automatically towards optimization. Using such a system in neural networks, we may come as close as possible to the workings of the human brain. The *abstract fuzzy optimization* is seen to follow a Gaussian distribution.

Introduction:

There are quite a large number of differences between the way present day computers work and the way the brain works. The very way in which basic processing is done by computers varies vastly from the way the brain processes information. Computers, working on binary logic, can take into account only *high* or *low* states. They can have a

Complex Fuzzy Abstraction The Brain Logic:

It's Abstraction, Concretely John McGreal, 2017-02-21 John McGreal's three new books *It's Abstraction*, *Concretely*, and *It's Representation* Really continue the *It* Series published by Matador since 2010. They constitute another stage in an artistic journey exploring the visual and audial dialectic of mark word and image that began over 25 years ago. Emerging out of the first books on the Bibliograph published in 2016 initiated with *It's Nothing*, Seriously these new texts retain some of the same structural features. The Bibliographs contain the same focus on repetition and variation in meaning of their dominant motifs of representation, abstraction, and figuration which have framed philosophical discourse on epistemology and ontology in aesthetics. Their chance placement in each Bibliograph interspersed with one another displaying and enhancing similarities and differences. At the same time these works constitute a development in the aesthetic form of the Bibliograph. In earlier works on *Nothing*, *Absence*, and *Silence* it was just a question of finding and transferring given textual references from their source to construct their Bibliographs with the focus being on the strategic position of the latter within each book. In these new works the concern has been with working on the line and shape of the references themselves with their enhanced spacial form as well as that of each Bibliograph as a whole. In shaping and spacing the referential images the place of words and letters became as important as their semantic to read in a new way on diverse contemporary issues across conventional boundaries in the arts and sciences at several levels of physical, psychical, and social reproduction.

Innovative Teaching and Learning Professor Lakhmi C. Jain, 2013-11-11 Presented are innovative teaching and learning techniques for the teaching of knowledge based paradigms. The main knowledge based intelligent paradigms are expert systems, artificial neural networks, fuzzy systems, and evolutionary computing. Expert systems are designed to mimic the performance of biological systems. Artificial neural networks can mimic the biological information processing mechanism in a very limited sense. Evolutionary computing algorithms are used for optimization applications and fuzzy logic provides a basis for representing uncertain and imprecise knowledge. An Abstract Approach to W-Structures Based on Hypersoft Set with Properties Muhammad Saeed, Atiqe Ur Rahman, Muhammad Imran Harl, 2022-03-01 Hypersoft set is an emerging knowledge of study which is projected to address the limitations of soft set for the entitlement of multi argument approximate function. This function maps sub parametric tuples to power set of universe. It emphasizes the partitioning of each attribute into its respective attribute valued set that is missing in existing soft set like structures. Recent Advances in Intelligent Control Systems Wen Yu, 2009-05-27 *Recent Advances in Intelligent Control Systems* gathers contributions from workers around the world and presents them in four categories according to the style of control employed: fuzzy control, neural control, fuzzy neural control, and intelligent control. The contributions illustrate the interdisciplinary antecedents of intelligent control and contrast its results with those of more traditional control methods. A variety of design examples drawn primarily from robotics and mechatronics but also representing process and production engineering, large civil structures, network flows, and

others provide instances of the application of computational intelligence for control Presenting state of the art research this collection will be of benefit to researchers in automatic control automation computer science especially artificial intelligence and mechatronics while graduate students and practicing control engineers working with intelligent systems will find it a good source of study material
