This book approaches the issue of military privatization by linking it to the transformation of the defence industries since the early 1990s and shows the extent to which many military functions and activities ranging from military research to military consulting training to operational support services have already been outsourced in the US and in Europe. This detailed study provides new and updated information on the ongoing privatization of the defence sector and offers an original theoretical explanation as to why the most modern armed forces throughout the world have come increasingly to rely on private companies for nearly everything they do. Contributing to a better understanding of military privatization and its close connection to technological change, the book explains the complexity of the whole phenomenon and discusses its implications for national and international security. **Science, Strategy and War** Frans P.B. Osinga, 2007-01-24 John Boyd is often known exclusively for the so-called OODA loop model he developed. This model refers to a decision-making process and to the idea that military victory goes to the side that can complete the cycle from observation to action the fastest. This book aims to redress this state of affairs and re-examines John Boyd's original contribution to strategic theory. By highlighting diverse sources that shaped Boyd's thinking and by offering a comprehensive overview of Boyd's work, this volume demonstrates that the common interpretation of the meaning of Boyd's OODA loop concept is incomplete. It also shows that Boyd's work is much more comprehensive, richer and deeper than is generally thought. With his ideas featuring in the literature on Network Centric Warfare, a key element of the US and NATO's so-called military transformation programmes as well as in the debate on Fourth Generation Warfare, Boyd continues to exert a strong influence on Western military thinking. Dr Osinga demonstrates how Boyd's work can help us to understand the new strategic threats in the post-9/11 world and establishes why John Boyd should be regarded as one of the most important post-modern strategic theorists. **U.S.-China Strategic Relations and Competitive Sports** David Lai, 2022-02-21 This book investigates cultural influences of competitive sports on US and Chinese strategic thinking and tactical behavior. Most

competitive sports owe their origins to human fighting. Although they are ritualized contests, competitive sports have retained many aspects of human warfare, especially the use of strategy and tactics that moves human contest beyond military clashes to the subjugation of opponents without bloodshed. Cultural influences usually go unnoticed. Indeed, Washington often conducts foreign affairs like football games without knowing that is the case. Likewise, Beijing moves in Weiqi style subconsciously. This book uncovers these influences.

Military Innovation in Small States Michael Raska, 2015-11-06. This book provides a comprehensive assessment of the global diffusion of the Revolution in Military Affairs (RMA) and its impact on military innovation trajectories in small states. Although the Revolution in Military Affairs (RMA) concept has enjoyed significant academic attention, the varying paths and patterns of military innovation in divergent strategic settings have been overlooked. This book seeks to rectify this gap by addressing the broad puzzle of how the global diffusion of RMA-oriented military innovation, the process of international transmission, communication, and interaction of RMA-related military concepts, organizations, and technologies has shaped the paths, patterns, and scope of military innovation of selected small states. In a reverse mode, how have selected small states influenced the conceptualization and transmission of the RMA theory, processes, and debate? Using Israel, Singapore, and South Korea as case studies, this book argues that RMA-oriented military innovation paths in small states indicate predominantly evolutionary trajectories, albeit with varying patterns resulting from the confluence of three sets of variables: 1) the level of strategic, organizational, and operational adaptability in responding to shifts in the geostrategic and regional security environment; 2) the ability to identify, anticipate, exploit, and sustain niche military innovation; select conceptual, organizational, and technological innovation intended to enhance the military's ability to prepare for fight and win wars; and 3) strategic culture. While the book represents relevant empirical cases for testing the validity of the RMA diffusion hypotheses from a policy-oriented perspective, this book argues that these case studies offer lessons learned in coping with the security and defence management challenges posed by military innovation in general. This book will be of much interest for students of military innovation, strategic studies, defence studies, Asian politics, Middle Eastern politics, and security studies in general.
