

The Solar System

Read the article and then answer the questions

The solar system came into being about 4.5 billion years ago when a cloud of gas and dust collapsed, resulting in a solar nebular, a swirling disc of material that collided to form the solar system, also known as a planetary system.

Only 15% of the stars in the galaxy host planetary systems, and one of those stars is our own sun. Revolving around the sun are 8 planets, and based on their composition are categorised as Terrestrial or Jovian. Terrestrial planets lie on the inner part of the solar system and include Mercury, Venus, Earth and Mars which are made up of rocky material. They have solid surfaces and no ring systems. They have very few moons and are relatively small planets. Mercury is the smallest planet and is closest to the sun. It has the shortest orbit which is around 3 'Earthly months'. Venus is the hottest planet in our solar system, with temperatures up to 867 degrees. Around 3.7 billion years ago, Mars had a watery surface similarly to Earth and it's believed it once supported 'life' there once.

The Jovian planets, lie on the outer part of the solar system and include Jupiter, Saturn, Neptune and Uranus. All Jovian planets have multiple moons, sport ring systems and are immense and have no solid surface. Jupiter is the largest planet in the solar system, next to Saturn which is the second largest planet. Both of which are referred to as 'gas giants' made up of helium and hydrogen. In contrast, Neptune and Uranus are described as 'ice giants' primarily made up of a liquid mixture of ice, water, methane and ammonia. Neptune is the coldest planet in our solar system with the average temperature a brutally cold -373 degrees farenheit.

As scientists continue to research the universe and discover new planetary systems, it's nice to remind ourselves that our solar system all revolves around one life-giving star, making it a special place to call home.

1 Answer the questions about the reading

definitive source on its subject for the next decade *Social Neuroscience* Gary G. Berntson, John T. Cacioppo, 2013-09-05

Neuroscientists and cognitive scientists have collaborated for more than a decade with the common goal of understanding how the mind works. These collaborations have helped unravel puzzles of the mind including aspects of perception, imagery, attention, and memory. Many aspects of the mind, however, require a more comprehensive approach to reveal the mystery of mind-brain connections. Attraction, altruism, speech recognition, affiliation, attachment, attitudes, identification, kin recognition, cooperation, competition, empathy, sexuality, communication, dominance, persuasion, obedience, morality, contagion, nurturance, violence, and person memory are just a few. Through classic and contemporary articles and reviews, *Social Neuroscience* illustrates the complementary nature of social, cognitive, and biological levels of analysis and how research integrating these levels can foster more comprehensive theories of the mechanisms underlying complex behaviour and the mind. **Finding Our Center** Heather M. Ensworth, 2009-11-25

Integrating astrology, mythology, and spirituality, this book is a reflection on the themes of the astrological ages across the past 13 000 years and is an exploration of what astrology has to tell us about the meaning of the changes happening globally and culturally in this time. We are currently on the cusp of the Age of Aquarius at the end of a 26 000 year precessional cycle and according to ancient prophecies at the close of a world era. With the recent discovery of the planetoids Sedna and Eris, new forms of consciousness are entering our awareness. Through listening to the messages of the stars and planets, we find guidance for our lives in this intense time of change. We live in a sentient universe which is calling us back into relationship with the cosmos and with the Earth. In remembering our source, the galactic center, reconnecting with the spirit in all of life, and in becoming centered within ourselves, we gain meaning and wisdom for who we are and who we are becoming, and find a path for the healing and evolution of ourselves and our Earth.

The Inner Planets Clark R. Chapman, 1977

America keeps a fine house. Anatol Lieven writes, but in its cellar there lives a demon whose name is nationalism. In this controversial critique of America's role in the world, Lieven contends that U.S. foreign policy since 9/11 has been shaped by the special character of our national identity, which embraces two contradictory features. One: The American Creed is a civic nationalism which espouses liberty, democracy, and the rule of law. It is our greatest legacy to the world. But our almost religious belief in the Creed creates a tendency toward a dangerously messianic element in American nationalism: the desire to extend American values and American democracy to the whole world, irrespective of the needs and desires of others. The other feature: populist or what is sometimes called Jacksonian nationalism has its roots in an aggrieved, embittered, and defensive White America centered largely in the American South. Where the Creed is optimistic and triumphalist, Jacksonian nationalism is fed by a profound pessimism and a sense of personal, social, religious, and sectional defeat. Lieven examines how these two antithetical impulses have played out in recent U.S. policy, especially in the Middle East and in the nature of U.S. support for Israel. He suggests that in this region the uneasy combination of policies based on two contradictory traditions have gravely undermined U.S. credibility and complicated the

war against terrorism It has never been more vital that Americans understand our national character This hard hitting critique directs a spotlight on the American political soul and on the curious mixture of chauvinism and idealism that has driven the Bush administration
