Computer Analysis Of Human Behavior:

Computer Analysis of Human Behavior Albert Ali Salah, Theo Gevers, 2011-10-07 This book provides a broad survey of advanced pattern recognition techniques for human behavior analysis. Clearly structured, the book begins with concise coverage of the major concepts before introducing the most frequently used techniques and algorithms in detail and then discussing examples of real applications. Features: contains contributions from an international selection of experts in the field; presents a thorough introduction to the fundamental topics of human behavior analysis; investigates methods for activity recognition including gait and posture analysis, hand gesture analysis, and semantics of human behavior in image sequences; provides an accessible psychological treatise on social signals for the analysis of social behaviors; discusses voice and speech analysis combined with audiovisual cues and social interactions and group dynamics; examines applications in different research fields; each chapter concludes with review questions, a summary of the topics covered, and a glossary.

Human Behavior Analysis: Sensing and Understanding Zhiwen Yu, Zhu Wang, 2020-02-29 Over the last decade there has been a growing interest in human behavior analysis motivated by societal needs such as security, natural interfaces, affective computing, and assisted living. However, the accurate and non-invasive detection and recognition of human behavior remain major challenges and the focus of many research efforts. Traditionally, in order to identify human behavior, it is first necessary to continuously collect the readings of physical sensing devices, e.g., camera, GPS, and RFID, which can be worn on human bodies, attached to objects, or deployed in the environment. Afterwards, using recognition algorithms or classification models, the behavior types can be identified so as to facilitate advanced applications. Although such traditional approaches deliver satisfactory performance and are still widely used, most of them are intrusive and require specific sensing devices, raising issues such as privacy and deployment costs. In this book, we will present our latest findings on non-invasive sensing and understanding of human behavior. Specifically, this book differs from existing literature in the following senses: Firstly, we focus on approaches that are based on non-invasive sensing technologies including both sensor-based and device-free variants. Secondly, while most existing studies examine

individual behaviors we will systematically elaborate on how to understand human behaviors of various granularities including not only individual level but also group level and community level behaviors Lastly we will discuss the most important scientific problems and open issues involved in human behavior analysis Human Behavior Understanding Albert Ali Salah, Theo Gevers, Nicu Sebe, Alessandro Vinciarelli, 2010-07-30 This book constitutes the refereed proceedings of the First International Workshop on Human Behavior Understanding HBU 2010 a satellite workshop of the International Conference on Pattern Recognition in Istanbul Turkey on August 22 2010 The 13 revised full papers presented were carefully reviewed and selected from 29 submissions The papers are organized in topical sections on analysis of human activities non verbal action dynamics visual action recognition and social signals *NBS Special Publication* , 1968 Semantic Analysis and Understanding of Human Behavior in Video Streaming Alberto Amato, Vincenzo Di Lecce, Vincenzo Piuri, 2012-09-18 Semantic Analysis and Understanding of Human Behaviour in Video Streaming investigates the semantic analysis of the human behaviour captured by video streaming and introduces both theoretical and technological points of view Video analysis based on the semantic content is in fact still an open issue for the computer vision research community especially when real time analysis of complex scenes is concerned This book explores an innovative original approach to human behaviour analysis and understanding by using the syntactical symbolic analysis of images and video streaming described by means of strings of symbols A symbol is associated to each area of the analyzed scene When a moving object enters an area the corresponding symbol is appended to the string describing the motion This approach allows for characterizing the motion of a moving object with a word composed by symbols By studying and classifying these words we can categorize and understand the various behaviours The main advantage of this approach lies in the simplicity of the scene and motion descriptions so that the behaviour analysis will have limited computational complexity due to the intrinsic nature both of the representations and the related operations used to manipulate them Besides the structure of the representations is well suited for possible parallel processing thus allowing for speeding up the analysis when appropriate hardware architectures are used A new methodology for design systems for hierarchical high semantic level analysis of video streaming in narrow domains is also proposed Guidelines to design your own system are provided in this book Designed for practitioners computer scientists and engineers working within the fields of human computer interaction surveillance image processing and computer vision this book can also be used as secondary text book for advanced level students in computer science and engineering *Publications of the National Institute of Standards and Technology ...
