Computer Algebra Parallelism Computational Mathematics And Applications Series:

Computer Algebra and Parallelism Jean Della Dora,1989 This volume asssembles papers describing the present state of development of practical parallelism for computer algebra Subjects covered include vectorization loosely couple systems and a variety of algorithmic developments and software tools with an emphasis on finding solutions to real problems and producing usable algebra systems **Computer Algebra and Parallelism** Richard E. Zippel,1992-03-25 This book contains papers presented at a workshop on the use of parallel techniques in symbolic and algebraic computation held at Cornell University in May 1990 The eight papers in the book fall into three groups The first three papers discuss particular programming substrates for parallel symbolic computation especially for distributed memory machines The next three papers discuss novel ways of computing with elements of finite fields and with algebraic numbers The finite field technique is especially interesting since it uses the Connection Machine a SIMD machine to achievesurprising amounts of parallelism One of the parallel computing substrates is also used to implement a real root isolation technique One of the crucial algorithms in modern algebraic computation is computing the standard or Gr bner basis of an ideal The final two papers discuss two different approaches to speeding their computation One uses vector processing on the Cray and achieves significant speed ups The other uses a distributed memory multiprocessor and effectively explores the trade offs involved with different interconnect topologies of the multiprocessors **Computer Algebra and Differential Equations** E. Tournier,1989 Ordinary differential equations have been studied by mathematicians for many years and the standard techniques have been either by series expansions or by numerical methods Computer algebra has introduced an alternative means of treating differential equations and solving them more readily This volume assembles contributions from leading mathematicians in this growing field of computer algebra **Finite Elements for Analysis and Design** J. E. Akin,2014-06-28 The finite element method FEM is an analysis tool for problem solving used throughout applied mathematics engineering and scientific computing Finite Elements for Analysis and Design provides a thoroughlyrevised and up to date account of this important tool and its numerous applications with added emphasis on basic theory Numerous worked examples are included to illustrate the material Akin clearly explains the FEM a numerical analysis tool for problem solving throughout applied mathematics engineering and scientific computing Basic theory has been added in the book including worked examples to enable students to understand the concepts Contains coverage of computational topics including worked examples to enable students to understand concepts Improved coverage of sensitivity analysis and computational fluid dynamics Uses example applications to increase students understanding Includes a disk with the FORTRAN source for the programs cided in the text

Differential Equations and Computer Algebra Michael F. Singer,1991 Teaches computer algebra users about up to date research developments in differential equations with selected papers from CADE 1990 held at Cornell University Featuring US and European research figures this book demonstrates scientific computing applications **Parallel**

Symbolic Computation Pasco '94 - Proceedings Of The First International Symposium Hoon Hong,1994-09-17 These proceedings are devoted to communicating significant developments in all areas pertinent to Parallel Symbolic Computation The scope includes algorithms languages software systems and application in any area of parallel symbolic computation where parallelism is interpreted broadly to include concurrent distributive cooperative schemes and so forth   Symbolic Rewriting Techniques Manuel Bronstein,Johannes Grabmeier,Volker Weispfenning,2013-03-11 Symbolic rewriting techniques are methods for deriving consequences from systems of equations and are of great use when investigating the structure of the solutions Such techniques appear in many important areas of research within computer algebra the Knuth Bendix completion for groups monoids and general term rewriting systems the Buchberger algorithm for Gr bner bases the Ritt Wu characteristic set method for ordinary differential equations and the Riquier Janet method for partial differential equations This volume contains invited and contributed papers to the Symbolic Rewriting Techniques workshop which was held at the Centro Stefano Franscini in Ascona Switzerland from April 30 to May 4 1995 That workshop brought together 40 researchers from various areas of rewriting techniques the main goal being the investigation of common threads and methods Following the workshops each contribution was formally refereed and 14 papers were selected for publication   *Subject Guide to Books in Print* ,1993   Euro-Par' 99 Parallel Processing Patrick Amestoy,Philippe Berger,Michel Dayde,Iain Duff,Valerie Fraysse,Luc Giraud,Daniel Ruiz,2003-05-21 Euro Parisaninternationalconferencededicatedtothepromotionandadvan ment of all aspects of parallel computing The major themes can be divided into the broad categories of hardware software algorithms and applications for p allel computing The objective of Euro Par is to provide a forum within which to promote the development of parallel computing both as an industrial te nique and an academic discipline extending the frontier of both the state of the art and the state of the practice This is particularly important at a time when parallel computing is undergoing strong and sustained development and experiencing real industrial take up The main audience for and participants in Euro Parareseenasresearchersinacademicdepartments governmentlabora ries and industrial organisations Euro Par s objective is to become the primary choice of such professionals for the presentation of new results in their specic areas Euro Par is also interested in applications which demonstrate the e tiveness of the main Euro Par themes There is now a permanent Web site for the series http brahms fmi uni passau de cl europar where the history of the conference is described Euro Par is now sponsored by the Association of Computer Machinery and the International Federation of Information Processing Euro Par 99 The format of Euro Par 99follows that of the past four conferences and consists of a number of topics eachindividually monitored by a committee of four There were originally 23 topics for this year s conference The call for papers attracted 343 submissions of which 188 were accepted Of the papers accepted 4 were judged as distinguished 111 as regular and 73 as short papers   Mathematical Reviews ,2001   Applications of Computer Algebra Richard Pavelle,2012-12-06 Today certain computer software systems exist which surpass the computational ability of

researchers when their mathematical techniques are applied to many areas of science and engineering These computer systems can perform a large portion of the calculations seen in mathematical analysis Despite this massive power thousands of people use these systems as a routine resource for everyday calculations These software programs are commonly called Computer Algebra systems They have names such as MACSYMA MAPLE muMATH REDUCE and SMP They are receiving credit as a computational aid with in creasing regularity in articles in the scientific and engineering literature When most people think about computers and scientific research these days they imagine a machine grinding away processing numbers arithmetically It is not generally realized that for a number of years computers have been performing non numeric computations This means for example that one inputs an equa tion and obtains a closed form analytic answer It is these Computer Algebra systems their capabilities and applications which are the subject of the papers in this volume   *Recent Advances in Parallel Virtual Machine and Message Passing Interface* Beniamino Di Martino,Dieter Kranzlmüller,Jack Dongarra,2005-09-05 This book constitutes the refereed proceedings of the 12th European PVM MPI Users Group Meeting held in Sorrento Italy in September 2005 The 61 revised full papers presented together with abstracts of 6 invited contributions were carefully reviewed and selected from numerous submissions The papers are organized in topical sections on algorithms extensions and improvements cluster and grid tools and environments performance applications and ParSim 2005   **Handbook of Parallel Computing and Statistics** Erricos John Kontoghiorghes,2005-12-21 Technological improvements continue to push back the frontier of processor speed in modern computers Unfortunately the computational intensity demanded by modern research problems grows even faster Parallel computing has emerged as the most successful bridge to this computational gap and many popular solutions have emerged based on its concepts   *Dynamic Modules* Andreas Sorgatz,2012-12-06 A dynamic module is a special kind of machine code library that can be loaded at run time like MuPAD library packages Dynamic modules allow users to integrate simple C C functions as well as complete software packages into MuPAD and to use them as regular MuPAD functions They give users direct access to internal methods and data structures of MuPAD and allow it to be extended with almost any desired feature Programming and creating dynamic modules is facilitated by the MuPAD Application Programming Interface MAPI and a special generator This book is addressed to users and developers of dynamic modules in MuPAD The accompanying CD ROM includes a hypertext version of the manual and a trial version of MuPAD 1 4 1 for Linux and Solaris 2 5   **Hagenberg Research** Bruno Buchberger,Michael Affenzeller,Alois Ferscha,Michael Haller,Tudor Jebelean,Erich Peter Klement,Peter Paule,Gustav Pomberger,Wolfgang Schreiner,Robert Stubenrauch,Roland Wagner,Gerhard Weiß,Wolfgang Windsteiger,2009-05-29 BrunoBuchberger This book is a synopsis of basic and applied research done at the various re search institutions of the Softwarepark Hagenberg in Austria Starting with 15 coworkers in my Research Institute for Symbolic Computation RISC I initiated the Softwarepark Hagenberg in 1987 on request of the Upper Aus trian Government with the objective of creating a

scienti c technological and economic impulse for the region and the international community In the meantime in a joint e ort the Softwarepark Hagenberg has grown to the current 2009 size of over 1000 R D employees and 1300 students in six research institutions 40 companies and 20 academic study programs on the bachelor master s and PhD level The goal of the Softwarepark Hagenberg is innovation of economy in one of the most important current technologies software It is the message of this book that this can only be achieved and guaranteed long term by watering the root namely emphasis on research both basic and applied In this book we summarize what has been achieved in terms of research in the various research institutions in the Softwarepark Hagenberg and what research vision we have for the imminent future When I founded the Softwarepark Hagenberg in addition to the watering the root principle I had the vision that such a technology park can only prosper if we realize the magic triangle i e the close interaction of research academic education and business applications at one site see Figure 1 **Computation with Finitely Presented Groups** Charles C. Sims,1994-01-28 Research in computational group theory an active subfield of computational algebra has emphasised three areas finite permutation groups finite solvable groups and finitely presented groups This book deals with the third of these areas The author emphasises the connections with fundamental algorithms from theoretical computer science particularly the theory of automata and formal languages computational number theory and computational commutative algebra The LLL lattice reduction algorithm and various algorithms for Hermite and Smith normal forms from computational number theory are used to study the abelian quotients of a finitely presented group The work of Baumslag Cannonito and Miller on computing nonabelian polycyclic quotients is described as a generalisation of Buchberger s Gr bner basis methods to right ideals in the integral group ring of a polycyclic group Researchers in computational group theory mathematicians interested in finitely presented groups and theoretical computer scientists will find this book useful EUROCAL '85.
