Computer Algebra Recipes Richard Enns, George C. McGuire, 2001-06-08 Computer algebra systems allow students to work on mathematical models more efficiently than in the case of pencil and paper. The use of such systems also leads to fewer errors and enables students to work on complex and computationally intensive models. Aimed at undergraduates in their second or third year, this book is filled with examples from a wide variety of disciplines including biology, economics, medicine, engineering, game theory, physics, and chemistry. The text includes a large number of Maple R recipes. *Computer Algebra Recipes* Richard H. Enns, George C. McGuire, 2007-03-13 This book presents a large number of computer algebra worksheets or recipes that have been designed using MAPLE to provide tools for problem solving and to stimulate critical thinking. No prior knowledge of MAPLE is necessary. All relevant commands are introduced on a need-to-know basis and are indexed for easy reference. Each recipe features a scientific model or method and an interesting or amusing story designed to both entertain and enhance concept comprehension and retention. **Computer Algebra Recipes for Mathematical Physics** Richard H. Enns, 2011-03-21 **Computer Algebra Recipes for Classical Mechanics** Richard H. Enns, George C. McGuire, 2002-11-22 This is a standalone but the recipes are correlated with topics found in standard texts and make use of MAPLE Release 7. As a reference text or self-study guide, this book is useful for science professionals and engineers. Good for the classroom, correlates with topics found in standard classical mechanics texts. This book makes use of the powerful computer algebra system MAPLE Release 7 but no prior knowledge of MAPLE is presumed. The relevant command structures are explained on a need-to-know basis as the recipes are developed, thus making this a standalone text. [Computer Algebra Recipes](#) Richard Enns, George C. McGuire, 2014-01-15 **Computer Algebra Recipes for Mathematical Physics. (+ CD-ROM)** Richard H. Enns, 2005 *Computer Algebra Recipes* Richard Enns, George C. McGuire, 2013-03-07 Computer algebra systems have the potential to revolutionize the teaching of and learning of science. Not only can students work thorough mathematical models much more efficiently and with fewer errors than with pencil and paper, they can also work with much more complex and computationally intensive models. Thus, for example, in studying the flight of a golf ball, students can begin with the simple parabolic trajectory but then add the effects of lift and drag of winds and of spin. Not only can the program provide analytic solutions, in some cases it can also produce numerical solutions and graphic displays. Aimed at undergraduates in their second or third year, this book is filled with examples from a wide variety of disciplines including biology, economics, medicine, engineering, game theory, physics, chemistry. The text is organized along a spiral, revisiting general topics such as graphics, symbolic computation, and numerical simulation in greater detail and more depth at each turn of the spiral. The heart of the text is a large number of computer algebra recipes. These have been designed not only to provide tools for problem solving but also to stimulate the reader's imagination. Associated with each recipe is a scientific model or method and a story that leads the reader through steps of the recipe. Each section of recipes is followed by a set of

problems that readers can use to check their understanding or to develop the topic further Computer Algebra Recipes Richard H. Enns, George C. Enns, 2006-03-20 Uses a pedagogical approach that makes a mathematically challenging subject easier and more fun to learn Self contained and standalone text that may be used in the classroom for an online course for self study as a reference Using MAPLE allows the reader to easily and quickly change the models and parameters *Computer Algebra Recipes for Classical Mechanics* Richard H. Enns, George McGuire, 2003 **Computer Algebra Recipes for Classical Mechanics** Richard H. Enns, George C. McGuire, 2012-12-06 Hundreds of novel and innovative computer algebra recipes will enable readers starting at the second year undergraduate level to easily and rapidly solve and explore most problems they encounter in their classical mechanics studies Using the powerful computer algebra system MAPLE Release 8 no prior knowledge of MAPLE is presumed the relevant command structures are explained on a need to know basis as the recipes are developed This new problem solving guide can serve in the classroom or for self study for reference or as a text for an on line course

Enns, 2010-10-15 Drawing examples from mathematics physics chemistry biology engineering economics medicine politics and sports this book illustrates how nonlinear dynamics plays a vital role in our world Examples cover a wide range from the spread and possible control of communicable diseases to the lack of predictability in long range weather forecasting to competition between political groups and nations After an introductory chapter that explores what it means to be nonlinear the book covers the mathematical concepts such as limit cycles fractals chaos bifurcations and solitons that will be applied throughout the book Numerous computer simulations and exercises allow students to explore topics in greater depth using the Maple computer algebra system The mathematical level of the text assumes prior exposure to ordinary differential equations and familiarity with the wave and diffusion equations No prior knowledge of Maple is assumed The book may be used at the undergraduate or graduate level to prepare science and engineering students for problems in the real world or for self study by practicing

scientists and engineers *Applied Mechanics Reviews* ,2004 **Maple** Victor Aladjev, Marijonas Bogdevicius, 2006 The book consists of two parts The first part consists of seven chapters and presents a new software for package Maple of releases 6 10 The tools represented in this chapters increase the range and efficiency of use of Maple on Windows platform The basic attention is devoted to additional tools created in the process of practical use and testing the Maple of releases 4 10 which by some parameters extend essentially the opportunities of the package and facilitate the work with it Whereas the algorithms of physical and engineering problems of the second part mainly use the finite element method FEM The part consists of eight chapters and solves in Maple environment the physical and engineering problems from such fields as thermal conductivity mechanics of deformable bodies theory of elasticity hydrodynamics hydromechanics etc At last application of Maple for solution of optimization problems is presented **Some Tapas of Computer Algebra** Arjeh M. Cohen, Hans Cuypers, Hans Sterk, 2013-03-09 In the years 1994 1995 two EIDMA mini courses on Computer Algebra were given at the Eindhoven University of Technology by apart from ourselves various invited lecturers EIDMA is the Research School Euler Institute for Discrete Mathematics and its Applications The idea of the courses was to acquaint young mathematicians with algorithms and software for mathematical research and to enable them to incorporate algorithms in their research A collection of lecture notes was used at these courses When discussing these courses in comparison with other kinds of courses one might give in a week's time Joachim Neuberger referred to our courses as tapas This denomination underlined that the courses consisted of appetizers for various parts of algorithmic algebra indeed we covered such spicy topics as the link between Gröbner bases and integer programming and the detection of algebraic solutions to differential equations As a collection the notes turned out to have some appeal of their own which is the main reason why the idea came up of transforming them into book form We felt however that the book should be distinguishable from a standard textbook on computer algebra in that it retains its appetizing flavour by presenting a variety of topics at an accessible level with a view to recent developments Computing with Maple Francis Wright, 2001-09-27 Powerful flexible easy to use small wonder that the use of MAPLE continues to increase particularly since the latest releases of MAPLE The built in nature of its numerical and graphical facilities gives MAPLE a distinct advantage over traditional programming languages yet to date no textbook has used that advantage to introduce programming concepts Moreover few books based on MAPLE's latest versions even exist Computing with MAPLE presents general programming principles using MAPLE as a concrete example of a programming language The author first addresses the basic MAPLE functions accessible for interactive use then moves to actual programming discussing all of the programming facilities that MAPLE provides including control structures data types graphics spreadsheets text processing and object oriented programming Reflecting MAPLE's primary function as a computational tool the book's emphasis is on mathematical examples and it includes a full chapter devoted to algebraic programming Classroom tested since 1995 the material in Computing with MAPLE is particularly appropriate for an

intermediate level introductory course in programming for both mathematics and computing students It includes numerous exercises and test questions with MAPLE worksheets contact information and supplementary material available on the Internet
