Complexity And Paradox:

The Complexity Paradox Kenneth Mossman, 2014-08-26 Living systems exhibit a fundamental contradiction they are highly stable and reliable yet they have the capacity to adapt to changing environmental conditions This paradoxical behavior arises from the complexity of life a high degree of order and cooperation that emerges from relatively simple interactions among cellular components The Complexity Paradox proposes inventive interdisciplinary approaches to maintaining health and managing and preventing disease by considering the totality of human biology from the cellular level on up to entire populations of individuals From the perspective of complexity which acknowledges that there are limits to what we can know Kenneth L Mossman opens the door to understanding essential life processes in new and extraordinary ways By tying together evolution functional dynamics and investigations into how the body processes energy and uses genetic information Mossman's analysis expresses a unified theory of biology that fills a critical niche for future research in biology medicine and public health

Paradox and the School Leader Chris Dolan, 2020-03-24 This book proposes that paradox as a theoretically rich and historically enduring concept has significant potential for researchers in the field of critical leadership studies By enriching its general form and infusing it with added complexity and theoretical influence it is argued that paradox can be legitimately applied as a lens for examining and as a pedagogy for realising new learning possibilities The book takes paradoxes as formed out of the constitutive practices of discourse rather than as representations of conflict or complexity Using fifteen paradoxes derived from theoretical and empirical analysis it provides insights into the competing forces that contradict simplistic positivist accounts of contemporary school leadership and reveal the presence of a political struggle for the soul of the principal in the neoliberal era It considers these paradoxes in three categories 1 principal subjectivity and authority 2 neoliberal policy and 3 managerial practice The

book advocates critique counter conduct and agonistic thought and practice as resources for principals participating in such a struggle and employs Foucault's care of the self and practices of freedom to promote more active involvement of principals in authoring their ethical and political selves

Postformal Education Jennifer M. Gidley, 2016-08-05 This book explains why the current education model which was developed in the 19th century to meet the needs of industrial expansion is obsolete It points to the need for a new approach to education designed to prepare young people for global uncertainty accelerating change and unprecedented complexity The book offers a new educational philosophy to awaken the creative big picture and long term thinking that will help equip students to face tomorrow's challenges Inside readers will find a dialogue between adult developmental psychology research on higher stages of reasoning and today's most evolved education research and practice This dialogue reveals surprising links between play and wisdom imagination and ecology holism and love The overwhelming issues of global climate crisis growing economic disparity and the youth mental health epidemic reveal how dramatically the current education model has failed students and educators This book raises a planet wide call to deeply question how we actually think and how we must educate It articulates a postformal education philosophy as a foundation for educational futures The book will appeal to educators educational philosophers pre service teacher educators educational and developmental psychologists and educational researchers including postgraduates with an interest in transformational educational theories designed for the complexity of the 21st century This is the most compelling book on education I have read for many years It has major implications for all who are in a position to influence developments in teacher education and educational policy Gidley is one of the very rare scholars who can write intelligently and accessibly about the past present and future in education I was challenged and ultimately convinced by her contention that what masquerades as education today must be seen for what it is an anachronistic relic of the industrial past Gidley's challenge is to co evolve a radically new education All who seek to play a part must read this book Brian J Caldwell PhD Educational Transformations former Dean of Education at the University of Melbourne and Deputy Chair Australian Curriculum Assessment and Reporting Authority ACARA

Empirical Paradox, Complexity Thinking and Generating New Kinds of Knowledge Paolo Grigolini, Korosh Mahmoodi, Bruce J. West, 2019-06-05 Is another world war inevitable The answer is a resounding yes if we continue to think in terms of either or outcomes Adversaries think in such terms you either get what you want or you do not Can a different way of thinking produce a different outcome This book shows that the consistency demanded by the linear logical either or thinking is disrupted by paradox whose resolution forces a consequent decision war

or peace with no middle ground If this were the only way of thinking then a person would be either a protagonist or an antagonist but a person can be both either or neither this opens the door to novel solutions This is both and thinking which the book shows can be achieved by a dynamic resolution of paradox Thus a basically selfish individual can also be a hero a consequence of the complexity of being human

Space Safety is No Accident Tommaso Sgobba, Isabelle Rongier, 2015-06-04 Includes the proceedings from the 7th IAASS Conference Space Safety is No Accident held in Friedrichshafen Germany in October 2014 The 7th IAASS Conference Space Safety is No Accident is an invitation to reflect and exchange information on a number of topics in space safety and sustainability of national and international interest The conference is also a forum to promote mutual understanding trust and the widest possible international cooperation in such matters The once exclusive club of nations with autonomous sub orbital and orbital space access capabilities is becoming crowded with fresh and ambitious new entrants New commercial spaceports are starting operations and others are being built In the manned spaceflight arena a commercial market is becoming a tangible reality with suborbital spaceflights and government use of commercial services for cargo and crew transportation to orbit Besides the national ambitions in space the international cooperation both civil and commercial is also gaining momentum In the meantime robotic space exploration will accelerate and with it the need to internationally better regulate the usage of nuclear power sources Space bound systems and aviation traffic will share more and more a crowded airspace while aviation will increasingly rely on space based safety critical services Finally most nations own nowadays space assets mainly satellites of various kinds and purposes which are under the constant threat of collision

Paradox Tom Vine, 2023-11-20 History reveals countless attempts by great minds to solve life's paradoxes But what if these attempts miss the point What if paradox is life Contrary to the supposedly sublime linear logic that underpins our prevalent modes of theoretical and empirical enquiry in this fascinating book organizational anthropologist Tom Vine charts the pervasiveness of paradox across the academy from arithmetic to zoology In so doing he reflects on the concept of paradox as a widespread existential pattern a pattern which holds significant metatheoretical and pedagogical potential Paradoxes he argues are not inconveniences or fault lines in our common sense world but are coded into our very existence Paradoxes thus present their own vital logics that shape our lives they thwart moral and ideological uniformity they even out subjective experience between the haves and the have nots and they shed light on the opaque concepts of consciousness and agency This book will appeal to anybody with a curious mind particularly scholars and students with an interest in one or more of the following complexity theory critical pedagogies ethnography nonlinear dynamics organization theory and systems theory
