*New Challenges in Gastrointestinal Endoscopy* Hisao Tajiri, Masatsugu Nakajima, Kenjiro Yasuda, 2009-02-11 Gastrointestinal GI

endoscopy has become indispensable in both diagnosis and treatment of GI disorders It has been 10 years now since the first Endoscopy Forum Japan was held and in that time leading young endoscopists including colleagues from Asia Australia Europe and the United States have participated in the forum discussing issues at the forefront of the field Through their efforts GI endoscopy has advanced with many new methods for both diagnoses and treatments and those achievements are included in this book Contributing to the development of endoscopic medicine all over the world this is a groundbreaking edifying and engrossing publication offering the most recent advances in the field precisely presented and depicted with more than 250 color photographs Novel technologies are described in detail and will be of interest to those in the field of medicine and in engineering as well

**Biomedical Optics in Otorhinolaryngology** Brian J.-F. Wong, Justus Ilgner, 2016-08-22 Biomedical Optics in Otorhinolaryngology Head and Neck Surgery gives an overview of current technology in biomedical optics relevant to the field of Otorhinolaryngology and head and neck surgery It provides a comprehensive source of knowledge for researchers and active clinicians seeking information on the principles and practical use of novel diagnostic and therapeutic technology While most books focus exclusively on laser surgery which has been largely unchanged for the past 15 years optical diagnostics and head and neck PDT photodynamic therapy are usually entirely overlooked This book contains a basic introduction into the physics of light and its propagation lasers and low coherent light sources and photon tissue interaction in relation to therapeutic and diagnostic use The principles of various imaging techniques are also discussed i e optical coherence tomography in its variations as well as the principles and practice of lasers for surgical use on the therapeutic side

*Zoom Gastroscopy* Kenshi Yao, 2013-11-12 Since magnifying endoscopy of the stomach or zoom gastroscopy was first performed at the beginning of the 21st century there have been numerous findings in the field worldwide The author of this volume has developed a standardized magnifying endoscopy technique that enables endoscopists to constantly visualize the microanatomy subepithelial capillaries and the epithelial structure within the stomach With this technology it has become easy to obtain magnified endoscopic findings Techniques differ however depending upon the endoscopist Endoscopists around the world do not have a standardized magnifying endoscopy technique which is mandatory for the scientific analysis of their findings In addition there is no logical explanation for how and which microanatomies are visualized by magnifying endoscopy with narrow band imaging in the glandular epithelium of the stomach This inconsistency results in considerable confusion among researchers and clinicians and a lack of terminology for the purposes of analysis As magnifying endoscopy with narrow band imaging NBI becomes more popular throughout the world there is increased demand for a specialized reference book focused on this subject The aims of the present volume *Zoom Gastroscopy Magnifying Endoscopy in the Stomach* are manifold 1 to illustrate the standard magnifying endoscopic technique that can visualize subepithelial mucosal microvessels as small as capillaries the smallest unit of blood vessels in the human body 2 to explain the optical phenomena and principles for NBI and its application to magnifying endoscopy 3 to

clarify which microanatomies are visualized by magnifying endoscopy with NBI and how this is achieved and 4 to present a diagnostic system so called VS classification system for early gastric neoplasias With a single author the book consistently uses uniform anatomical terms to describe endoscopic findings providing an essential reference for endoscopists in the world

Endoscopy in the Diagnosis of Small Intestine Diseases Toshiyuki Matsui,Takayuki Matsumoto,Kunihiko

Aoyagi,2014-01-31 The purpose of this book is to improve diagnostic yields of capsule endoscopy and double balloon endoscopy because those procedures can depict nonspecific findings that may not lead to a proper diagnosis Another reason for the publication was recognition of the difficulty in distinguishing enteroscopic findings of ulcerative colitis from those of Crohn s disease From a practical point of view it is important to observe endoscopic pictures first then to compare the images of other modalities and finally to compare macroscopic pictures of resected specimens For that reason a large number of well depicted examples of small intestinal lesions were assembled to clarify differences among small intestinal lesions that appear to exhibit similar findings and morphologies Comparisons with radiographic findings comprise another important element in diagnosis There are limitations in endoscopic observations of gross lesions of the small intestine with its many convolutions In Japan many institutions still practice double contrast imaging which provides beautiful results Because a single disorder may exhibit variations this volume includes multiple depictions of the same disorders Also included are lesions in active and inactive phases as both appearances are highly likely to be encountered simultaneously in clinical practice The number of illustrated findings therefore has been limited to strictly selected cases

New Techniques in Gastrointestinal Endoscopy Oliviu Pascu,Andrada Seicean,2011-10-03 As result of progress endoscopy has become more complex using more sophisticated devices and has claimed a special form In this moment the gastroenterologist performing endoscopy has to be an expert in macroscopic view of the lesions in the gut with good skills for using standard endoscopes with good experience in ultrasound for performing endoscopic ultrasound with pathology experience for confocal examination It is compulsory to get experience and to have patience and attention for the follow up of thousands of images transmitted during capsule endoscopy or to have knowledge in physics necessary for autofluorescence imaging endoscopy Therefore the idea of an endoscopist has changed Examinations mentioned need a special formation a superior level of instruction accessible to those who have already gained enough experience in basic diagnostic endoscopy This is the reason for what these new issues of endoscopy are presented in this book of New techniques in Gastrointestinal Endoscopy
