### **Physical Modeling and Computational Techniques for Thermal and Fluid-dynamics** Maurizio Bottoni, 2021-11-12

This book on computational techniques for thermal and fluid dynamic problems arose from seminars given by the author at the Institute of Nuclear Energy Technology of Tsinghua University in Beijing China The book is composed of eight chapters some of which are characterized by a scholastic approach others are devoted to numerical solution of ordinary differential equations of first order and of partial differential equations of first and second order respectively In Chapter IV basic concepts of consistency stability and convergence of discretization algorithms are covered in some detail Other parts of the book follow a less conventional approach mainly informed by the author's experience in teaching and development of computer programs Among these is Chapter III where the residual method of Orthogonal Collocations is presented in several variants ranging from the classical Galerkin method to Point and Domain Collocations applied to numerical solution of partial differential equations of first order In most cases solutions of fluid dynamic problems are led through the discretization process to the numerical solutions of large linear systems Intended to impart a basic understanding of numerical techniques that would enable readers to deal with problems of Computational Fluid Dynamics at research level the book is ideal as a reference for graduate students researchers and practitioners

Wilkins,2013-03-09 This text describes computer programs for simulating phenomena in hydro dynamics gas dynamics and elastic plastic flow in one two and three dimen sions Included in the two dimensional program are Maxwell s equations and thermal and radiation diffusion The programs were developed by the author during the years 1952 1985 at the Lawrence Livermore National Laboratory The largest main frame computers available in the early 1950s were re quired to solve hydrodynamic problems in one space dimension by using forty mass points Subsequently numerical methods were developed for solv ing problems in two and three space dimensions but application of these methods had to wait until the main frame computers were large enough to tackle meaningful problems At the present time lap top computers can use these methods to solve problems in three space dimensions with the detail of 10 000 mass points The numerical procedures described in the text permit the exact con servation of physical properties in the solutions of the fundamental laws of mechanics 1 conservation of mass 2 conservation of momentum 3 con servation of energy The laws of mechanics are universal in their application Examples are given for the same computer simulation programs solving prob lems of
