Păsăreanu, 2015-07-15 The two volume set LNCS 9206 and LNCS 9207 constitutes the refereed proceedings of the 27th International Conference on Computer Aided Verification CAV 2015 held in San Francisco CA USA in July 2015 The total of 58 full and 11 short papers presented in the proceedings was carefully reviewed and selected from 252 submissions The papers were organized in topical sections named model checking and refinements quantitative reasoning software analysis lightning talks interpolation IC3 PDR and Invariants SMT techniques and applications HW verification synthesis termination and concurrency **Computer-Aided Verification** Robert Kurshan, 2012-12-06 Computer Aided

Verification is a collection of papers that begins with a general survey of hardware verification methods Ms Gupta starts with the issue of verification itself and develops a taxonomy of verification methodologies focusing especially upon recent advances Although her emphasis is hardware verification most of what she reports applies to software verification as well Graphical presentation is coming to be a de facto requirement for a friendly user interface The second paper presents a generic format for graphical presentations of coordinating systems represented by automata The last two papers as a pair present a variety of generic techniques for reducing the computational cost of computer aided verification based upon explicit computational memory the first of the two gives a time space trade off while the second gives a technique which trades space for a sometimes predictable probability of error Computer Aided Verification is an edited volume of original research This research work has also been published as a special issue of the journal Formal Methods in System Design 1 2 3

Computer-Aided Verification Edmund M. Clarke, Robert P. Kurshan, 1991-10-02 This volume contains the proceedings of the second workshop on Computer Aided Verification held at DIMACS Rutgers University June 18 21 1990 It features theoretical results that lead to new or more powerful verification methods Among these are advances in the use of binary decision diagrams dense time reductions based upon partial order representations and proof checking in controller verification The motivation for holding a workshop on computer aided verification was to bring together work on effective algorithms or methodologies for formal verification as distinguished say from attributes of logics or formal languages The

considerable interest generated by the first workshop held in Grenoble June 1989 see LNCS 407 prompted this second meeting The general focus of this volume is on the problem of making formal verification feasible for various models of computation Specific emphasis is on models associated with distributed programs protocols and digital circuits The general test of algorithm feasibility is to embed it into a verification tool and exercise that tool on realistic examples the workshop included sessions for the demonstration of new verification tools
