Chapters on China and Forestry Tao-yang Ling,1916 **Forest and Land Management in Imperial China** N. Menzies,1994-09-01 Although China is generally considered to have suffered continuous deforestation over most of its history forests were protected or even planted and maintained for centuries in some places This study identifies six such cases It uses historical evidence to show that individuals and communities act to manage resources sustainably for a number of reasons including economic benefit religious or symbolic purposes and that sustainability of the management system depends on the form of control exerted over the resource

Timber and Forestry in Qing China Meng Zhang,2021-06-30 Winner of the 2022 Charles A Weyerhaeuser Book Award for best book on forest and conservation history sponsored by the Forest History Society Honorable Mention for the 2022 ISCLH First Biennial Book Prize sponsored by the International Society for Chinese Law and History Traces the sourcing of logs that fueled early modern urbanization In the Qing period

1644 1912 China's population tripled and the flurry of new development generated unprecedented demand for timber. Standard environmental histories have often depicted this as an era of reckless deforestation akin to the resource misuse that devastated European forests at the same time. This comprehensive new study shows that the reality was more complex as old growth forests were cut down, new economic arrangements emerged to develop renewable timber resources. Historian Meng Zhang traces the trade routes that connected population centers of the Lower Yangzi Delta to timber supplies on China's southwestern frontier. She documents innovative property rights systems and economic incentives that convinced landowners to invest years in growing trees. Delving into rare archives to reconstruct business histories, she considers both the formal legal mechanisms and the informal interactions that helped balance economic profit with environmental management. Of driving concern were questions of sustainability: How to maintain a reliable source of timber across decades and centuries? And how to sustain a business network across a thousand miles? This carefully constructed study makes a major contribution to Chinese economic and environmental history and to world historical discourses on resource management, early modern commercialization, and sustainable development. **World Forests, Society and Environment** Matti Palo, J.

Uusivuori, 2012-12-06 This book addresses current global and regional issues concerning the world's forests, societies, and the environment from an independent and non-governmental point of view. A main message is that cooperation on a global scale is not only commendable but essential if solutions to the problems facing the world's forests are to be found. To achieve this, modern science needs to find a clearer picture of relationships between forests, human activity, and the environment, and of the consequences of environmental change for the ability of societies to survive. Part I: Editorial Perspectives is analyzing the ongoing globalization processes of forests, societies, and the environment. Part II: Society and Environment reviews worldwide trends with significance for the future of forests and forestry. While the trends are influenced by forest sector issues, that sector is influenced to a much larger extent by external factors such as demography, urbanization, or technological development. Part III: Importance of Forests looks at the value of the goods and services of forests, tangible and intangible, market and non-market, and concludes that failure to recognize their full value is one of the crucial impediments to sustainable development. In Part IV: Global Forum, scientists take up global forestry themes: deforestation, trade, and the environment, climate change, biodiversity, with the aim of stimulating wider discussion. Part V: Regional Forum looks at major themes of particular relevance to Africa, Asia, Pacific, Latin America, North America, and Europe, such as farm and agroforestry, corruption, and concessions, urban forestry, and environmental conflicts. Part VI introduces the special theme: forest sectors in transition economies. Teams of scientists from Russia and China focus on the implications of the transition from plan to market economy, illuminating both the very different nature of the forest sector in the two countries and the different transition paths that they have adopted. In the past millennium, the entire world has been discovered. In the past half century, the contribution of forests to the economy worldwide has been perceived, while only recently have their societal and

environmental benefits been globally recognized Globalization is a demanding process requiring knowledge and information This book offers knowledge facts and information but also values from diverse human and cultural perspectives about world forests society and environment to help us towards equity in our use of the global forest to create a clearer vision on a unasyuva
