

## Solving Equations

Writing & solving equations can help us answer questions about situations.

Suppose a scientist has **13.68** liters of acid and needs **16.05** liters for an experiment. How many more liters of acid does she need for the experiment?

We can represent this situation with the equation:

$$13.68 + x = 16.05$$

The solution can be found by subtracting 13.68 from each side. This gives us some new equations that also represent the situation:

$$x = 16.05 - 13.68$$

$$x = 2.37$$

The solution is **2.37** liters.

Let's say a food pantry takes a **54**-pound bag of rice and splits it into portions that each weigh  $\frac{3}{4}$  of a pound. How many portions can they make from this bag?

We can represent this situation with the equation:

$$\frac{3}{4}x = 54$$

We can find the value of  $x$  by dividing each side by  $\frac{3}{4}$ . This gives us some new equations that represent the same situation:

$$x = 54 \div \frac{3}{4}$$

$$x = 72$$

The solution is **72** portions.
