Fossil Behavior Compendium Arthur James Boucot, 2010 *Some Thoughts about the Evolution of Human Behavior: a Literature Survey* Arthur J. Boucot, 2021-05-20 On his death Arthur Boucot 1924 2017 left an unfinished manuscript in which he surveyed the skeletal behavioural and cultural changes that have characterized Homo from its first recognition in the Late Pliocene to the present The subjects he treated were as varied as the preparation of food for infants the length of intestines hafting plastering use of flint and metals the domestication of grains and animals and the prevalence of parasitic diseases His text repeatedly notes the difficulties imposed by the enormous gaps in both fossil and archaeological records Boucot deduced a continuity in basic human behaviours from the Oldowan and Acheulian into modern forms and made a point of including Neandertals and Denisovans But he also pointed out that morphological changes in successive species of Homo do not coincide in time with major changes in lithic technologies Boucot concluded that a quantum evolutionary gap separates hominins from the great apes that members of our line were sapient and had been using language long before they became sapiens In his text he also indicates his concern for changes to the environment wrought by human activities The results of this late life effort edited after his death provide a heavily referenced sourcebook for future workers in diverse fields

Evolutionary Paleobiology of Behavior and Coevolution A.J. Boucot, 2013-10-22 This book is the culmination of many years of research by a scientist renowned for his work in this field It contains a compilation of the data dealing with the known stratigraphic ranges of varied behaviors chiefly animal with a few plant and fungal and coevolved relations A significant part of the data consists of frozen behavior i.e. those in which an

organism has been preserved while actually doing something as contrasted with the interpretations of behavior of an organism deduced from functional morphology important as the latter may be The conclusions drawn from this compilation suggest that both behaviors and coevolved relations appear infrequently following which there is relative fixity of the relation i e two rates of evolution very rapid and essentially zero This conclusion complies well with the author s prior conclusion that community evolution followed the same rate pattern In fact communities are regarded here as in large part expressions of both behavior and coevolved relations rather than as random aggregates controlled almost wholly by varied unrelated physical parameters tracked by organisms i e the concept that communities have no biologic reality being merely statistical abstractions The book is illustrated throughout with more than 400 photographs and drawings It will be of interest to ethologists evolutionists parasitologists paleontologists and palaeobiologists at research and post graduate levels
